PHILOSOPHICAL AND PRACTICAL

GRAMMAR

OF THE

ENGLISH LANGUAGE.

BY NOAH WEBSTER, ESQ.

THE SECOND EDITION.

* Antisthenes being asked, what learning was most necessary for man's life, replied, " To unlearn that which is naught " Bacon's Apatheme.

"Authority keeps in ignorance and error more people than all other causes. No opinion is too absurd to be received on this ground." Locke.

NEW-HAVEN:

PUBLISHED BY HOWE & SPALDING.

PRINTED BY S. CONVERSE.

1822.

BOUND JAN 5 1914

DISTRICT OF CONNECTICUT, ss.

BE IT REMEMBERED, That on the seventh day of October, in the forty seventh year of the Independence of the United States of America, Noah Web-Webster, of the said District, hath deposited in this Office the title of a Book, the right whereof he

ŕ.

claims as Author in the words following-to wit:

"A Philosophical and Practical Grammar of the English Language. By Noah Webster, Esq. The Second Edition.

"Anlisthenes being asked, what learning was most necessary for man's life, replied, 'To unlearn that which is naught.'

Bacon's Apothems."

Digitized by Google

"Authority keeps in ignorance and error, more people, than all other causes. No opinion is too absurd, to be received on this ground..." Locke."

In conformity to the Act of the Congress of the United States, entitled "An Act for the encouragement of learning, by securing the copies of Maps, Charts and Books, to the Authors and Proprietors of such copies, during the times therein mentioned."

CHAS. A. INGERSOI.L, Clerk of the Distruct of Connecticut. A true copy of Record, examined and sealed by me, CHAS. A. INGERSOLL, Clerk of the District of Connecticut.

PHILOSOPHICAL AND PRACTICAL

GRAMMAR.

Of Language.

LANGUAGE, in its most extensive sense, is the instrument or means of communicating ideas and affections of the mind and body, from one animal to another, In this sense, brates possess the powers of language; for by various inarticulate sounds, they make known their wants, desires, and sufferings. Thus the neighing of the horse, the lowing of the ox, the cackling and chirping of birds, constitute the language of those animals; and each respective species understand instinctively their own peculiar language. The signs made by deaf and dumb people form also a kind of imperfect language; and even the looks when made to express ideas and affections, speak an intelligible language.

As brutes have few affections or ideas, and little necessity for communicating them, their language consists in a few *inarticulate* sounds. But man, being a rational animal, capable of acquiring, and of learning to communicate numberless ideas, is furnished with suitable organs for uttering an indefinite variety of sounds to express his ideas; and the modulations of his voice, in the distinct utterance of sounds, constitute what are denominated articulate sounds.

Digitized by Google

A

Division of Language.

LANGUAGE is of two kinds, spoken and written. The elements of spoken language are articulate sounds uttered by the voice, which is formed by the air issuing through the glottis, a small aperture in the wind pipe, and modulated by articulations of the throat, tongue, palate, teeth, lips, and nostrils. This is the original and proper sense of the word, language.

But as sounds are fleeting, and not capable of being communicated to a great distance, if men had no other means of communicating their thoughts, their intercourse would be limited to a small compass, and their ideas would be entrusted to memory and tradition only; by which they would soon be obscured, perverted, or forgotten. Hence the invention of characters to represent sounds, exhibit them to the eye, and render them durable. This was the origin of written language. The elements of this language are letters or characters, which, by consent of men, and common usage, are combined into words, and made to represent the articulate sounds uttered by the These characters being easily inscribed or envoice. graved upon durable substances, as paper, parchment, wood and stone, render language permanent, and capable of being transmitted from age to age, and of being communicated over the habitable globe. Of this art, it is not easy to decide which deserves to be most admired, the difficulty, the ingenuity, or the usefulness of the invention.

Of Grammar.

GRAMMAR, as a science, treats of the natural connection between ideas, and words which are the signs of ideas, and developes the principles which are common to all languages. These principles are not arbitrary, nor subject to change, but fixed and permanent; being founded on facts and distinctions established by nature. Thus the distinction between the sexes; between things and their

qualities; between the names of substances and of their actions or motions; between unity and plurality; between the present, past and future time, and some other distinctions are founded in nature, and give rise to different species of words, and to various inflections in all languages.

The grammar of a particular language is a system of general principles, derived from natural distinctions of words, and of particular rules, deduced from the customary forms of speech, in the nation using that language. These usages are mostly arbitrary, or of accidental origin; but when they become common to a nation, they are to be considered as established, and received as rules of the highest authority.

A rule, therefore, is an established form of construction in a particular class of words. Thus the usual addition of s or es, to a noun, to denote plurality, being a general practice, constitutes a rule.

An exception to a rule, is the deviation of certain words from the common construction. 'Fhus man, if regularly formed in the plural, would be mans; but custom having established the use of men as its plural, the word is an exception to the general rule.

Grammar is commonly divided into four parts—orthography, etymology, syntax and prosody.

Orthography treats of the letters; their powers and combinations in syllables; or, it teaches the true manner of writing words, called spelling.

Etymology treats of the derivation of words from their radicals or primitives, and of their various inflections and modifications to express person, number, case, sex, time and mode.

Syntax explains the true mode of constructing senten-

Proposly treats of the quantity or accent of syllables and the laws of versification.

NOTE-In this compilation, the only subjects treated are, a part of etymology, and syntax and proceedy.

Of Letters.

THE elements, or first principles of language, are articulate sounds, and letters or characters, which represent them.

There are in the English language twenty-six letters, which represent sounds or articulations : A. a.—B. b.— C. c.—D. d.—E. e.—F. f.—G. g.—H. h.—I. i.—J. j.— K. k.—L. l.—M. m.—N. n.—O. o.—P. p.—Q. q.—R. r. S. s.—T. t.—U. u.,—V. v.—W. w.—X. x.—Y. y.— Z. z.. Of these, J and X represent a combination of articulations.

Letters are of two kinds—vowels and articulations; or, more strictly, of three kinds—vowels, articulations and aspirates.

A vowel is a vocal or open sound; or a simple sound, uttered by opening the mouth in a particular manner. A simple sound is one which is begun and continued at pleasure, with the same position of the organs, as— a, e_n , o, and the broad a or aw; the Italian a as in father, and oo, which in English represents the Italian u and French ou.

An articulation is the forming of a joint—a jointing or closing of the organs of speech; by which the voice is wholly or partially intercepted.*

A close articulation entirely and instantly interrupts the utterance of sound, as—m, p, t, in the syllables, sm, ep, et. These letters are therefore called *pure mutes*. A less close articulation admits a small prolongation of sound, as b, d, g, as in the syllables, eb, ed, eg. These are called *impure mutes*.

Imperfect articulations do not completely interrupt all sound. Some of them admit of a kind of hum; others of a hissing sound; others of a breathing, which may be continued at pleasure. Of this kind are the following letters: ef, el; em, en, er, es, ez, esh, eth. These are therefore called semi-vowels.

*Latin articulatio, from articulus, a joint,

Digitized by GOOGIC

H is a mark of breathing, and may be called an *aspirate*.

Articulations precede or follow vowels, as in *at*, *go*, *blush*. They therefore determine the manner of beginning and ending vocal sounds. But even when they produce no sound, they so modify the manner of uttering vowels, as to aid in forming distinct words. Thus in *bat*, *gap*, *cap*, we hear the same vowel, but the articulations which succeed or follow that sound, form with it different words, that may be distinguished as far as the voice can be heard.

An articulate sound is properly a sound which is preceded or followed by a closing of the organs; but we extend the signification to sounds formed by organs capable of articulation, that is, by the human organs of speech.

The great difference between men and brutes, in the utterance of sound by the mouth, consists in the power of articulation in man, and the entire want of it in brutes.

On articulation, therefore, depends the formation of syllables and words. It is the basis of human speech or language, and the faculty of articulation is the distinguishing characteristic and privilege of man.

All men, having similar organs of speech, use nearly the same articulations. Hence the same simple letters, or letters with the same powers, occur, with slight differences, in all languages. The compound letters, or combinations of sound, are subject to greater variety.

Articulations formed by the lips are called *labial* letters, or *labials*, lip-letters, from the Latin *labium*, a lip. Such are b, l, m, p, v. Those formed by the tongue and teeth, are called *dental letters*, of *dentals*, from the Latin *dens*, a tooth. Such are d, t, th, s and z. The two latter are also denominated *sihilant letters*, or *sibilants*, from the Latin *sibilo*, to hiss. Letters formed by the tongue and palate, are called *palatal letters*, or *palatals*, as g, k, l, er. The two former, when they represent a deep utterage of sound from the throat, may be called *gutturals*.

When an articulation occasions a sound through the nose, it is called a *nusal* letter. Such are m, n, and ng in *ing*.

Digitize by Google

2

J, in English, represents the sounds of d and soft g. H represents the sounds of k and s.

A diphthong is the union of two vowels, which are so rapidly uttered in succession, as to be considered as forming one syllable, as *oi*, and *oy*, in *voice*, *joy*.

A triphthong is the union of three vowels, as in addiew.

Etymology:

CLASSIFICATION OF WORDS.

WORDS are naturally divided into two CLASSES, PRIMA-By and SECONDARY.

The first class consists of words which are essential to the language of men; on which other words depend, or to which they are added as auxiliaries. In this class are in-These two cluded the Noun or Name, and the verb. species of words are so necessary to a communication of ideas, that no complete sentence or proposition can be formed without the use of both, unless when a substitute Thus, the sun shines, is a complete is used for a name. sentence, containing a name and a verb ; but remove either of them, and the proposition is destroyed. From the importance of these words, as well as from their being radicals, from which, many or most other words are formed, they are here denominated Primary, or the PRIMARY PARTS OF SPEECH

The second class consists of words of secondary or subordinate use, or of such as are dependent on other words in construction. Of these there are several species.

1st. Words which supply the place of other words and of sentences, which are here called pronouns or substitutes.

2d. Words which express the qualities of things, and which therefore are attached to the names of those things. These are here called *adjectives*, *attributes* or *attributives* These are *primary* words in point of importance; but being necessarily dependent on other words in construction, they are here ranked with the secondary.

3d. Words which modify the sense of other words by expressing the manner of action, or degree of quality. These are here called adverbs or modifiers.

Digitized by Google

1

é

ί.

4th. Words which are placed before other words, and show the relation between them and those which precede. These are called *prepositions*.

5th. Words which join together the parts of a sentence or of a discourse, in a regular construction. These are called connectives or conjunctions.

These five species of subordinate or dependent words are denominated secondary.

There are therefore two classes of words containing seven species or parts of speech. The first class contains two species.

I. Names or Nouns which are the signs of our ideas of whatever we conceive to exist, material and immaterial.

II. Verbs which express affirmation, motion, action or being.

The second class contains five species.

III. Pronouns or Substitutes, words which are used in the place of other words or of sentences.

IV. Adjectives or Attributes, which express the qualities of things, and qualify the action of verbs, or the sense of other attributes and modifiers.

V. Adverbs or Modifiers, which qualify the action of verbs, and the sense of attributes.

VI. Prepositions, which show the relation between words, and also the condition of things.

VII. Connectives or conjunctions, which unite sentences in construction.

Norz.—Participles are, by some grammarians, considered as a divition part of speech; and they certainly have some claims to be so considered, but I have chose to follow the common arrangement which is attended with no inconvenience.

Names or Nouns.

A name or noun is that by which a thing is called; and it expresses the idea of that which exists, material or immaterial.—Of material substances, as man, horse, tree, table—of immeterial things, as faith, hope, love. These and similar words are, by customary use, made the *names* of things which exist, or the symbols of ideas, which they express without the help of any other word.

Division of Names.

NAMES are of two kinds; common, or those which represent the idea of a whole kind or species; and proper or appropriate, which denote individuals. Thus animal is a name common to all beings, having organized bodies and endowed with life, digestion, and spontaneous motion. *Plant* and vegetable are names of all beings which have organized bodies and life, without the power of spontaneous motion. Fowl is the common name of all feathered animals which fly—fish, of animals which live wholly in water.

On the other hand, Thomas, John, William, are proper or appropriate names, each denoting an individual of which there is no species or kind. London, Paris, Amsterdam, Rhine, Po, Danube, Massachusetts, Hudson, Potomac, are also proper names, being appropriate to individual things,

Proper names however become common when they comprehend two or more individuals; as, the Capets, the Smiths, the Fletchers—"*Two Roberts* there the pagan force defy'd." *Hoole's Tasso*, b. 20.

Limitation of Names.

PROFER names are sufficiently definite without the aid of another word to limit their meaning, as Boston, Baltimore, Savannah. Yet when certain individuals have a common character, or predominant qualities which create a similitude between them, this common character becomes in the mind *a species*, and the proper name of an individual possessing this character, admits of the definitives and of plural number, like a common name. Thus a conspirator is called *a* Cataline ; and numbers of them Catalines or the Catalines of their country. A distinguish-

ed general is called a Cesar-an eminent orator the Cicero of his age.

But names, which are common to a whole kind or species, require often to be limited to an individual or a certain number of individuals of the kind or species. For this purpose the English language is furnished with a number of words, as an, or a, the, this, that, these, those, and a few others, which define the extent of the signification of common names, or point to the particular things mentioned. These are all adjectives or attributes, having a dependence on some noun expressed or implied; but some of them are used also as substitutes. Of these. an or a and the are never employed as substitutes, but are constantly attached to some name, or an equivalent word; and from their peculiar use, have obtained the distinctive appellation of articles. But definitive is a more significant and appropriate term ; as they are definitive attributes, and have, grammatically considered, the like use, as, this, that, some, none, any.

An is simply the Saxon ane, or an, one. It was formerly written an before an articulation; * but for the ease and rapidity of utterance, it is written and pronounced a before an articulation, and before a vowel which includes the sound of an articulation; as, a pen, a union. It retains its primitive orthography an, before a vowel, and a silent articulation; as, an eagle, an hour.

I

ξ

Th is used before vowels and articulations; but in poetry, e, for the sake of measure, may be omitted, and th made to coalesce with a succeeding vowel, as "th' embroidered vest."

RULE I.

A noun or name, without a preceding definitive, is used either in an unlimited sense, extending to the whole species, or, in an indefinite sense, denoting a number or quantity, but not the whole.—

" "And these geares warun ofslegene IX eorlas and an cyning." And this year wereslain nine earls and oneking.--Saxon Chron. p. 82.

A PHILOSOPHICAL AND

"The proper study of mankind is man." Pope.

Here man comprehends the whole species.

"In the first place, woman has, in general, much stronger propensity than man to the perfect discharge of parental duties." Life of Cowper.

Here woman and man comprehend each the whole species of its sex.

"From whom also I received *letters* to the brethren."— Acts 22.

""The men were overwhelmed by the waves, and absorbed by the eddies. Horses, baggage, and dead bodies, were seen floating together."

In these passages, letters, horses, and dead bodies, without a definitive, denote some, an *indefinite number*, but not all. So in the following sentence :

A house is consumed by fire—fire is extinguished b water.

Note.—The rule laid down by Lowth, and transcribed implicitly by his followers is general. "A substantive without any article to limit it, is taken in its *widest sense*; thus *man* means *all mankind*." The examples already given prove the inaccuracy of the rule. But let it be tried by other examples.

"There are *fishes* that have wings, and are not strangers to the airy regions."—LOCKE, b. 3. ch. 6. 12. If the rule is just, that *fishes* is to be " taken in its widest sense," then all *fishes* have wings!

"When ye shall see Jerusalem compassed with armie?"—What! all armies? "There shall be signs in the sun"—What! all signs? "Nation shall rise against nation."—What! every nation? How the rule vanishes before the test!

RULE II.

The definite an or a, being merely one, in its English orthography, and precisely synonymous with it, limits a common name to an individual of the species—Its sole use is to express unity, and with respect to number, is the most definite word imaginable—as an ounce, a church, a

ship, that is, one ship, one church. It is used before a name which is indefinite, or applicable to any one of a species; as

As doth a lion in a herd of neat." Shakspeare.

Here a limits the sense of the word *lion*, and that of *herd* to one—but does not specify the particular one—" As any lion does or would do in any herd."

This definitive is used also before names which are definite and as specific as possible: as, "Solomon built s temple." "The Lord God planted a garden eastward in Eden." London is a great commercial city. A decisive battle was fought of Marengo. The English obtained s singular naval victory at the mouth of the Nile.*

NOTE.

* "A respects the primary perception and denotes individuals as unknown—the respects our secondary perceptions and denotes individuals as known. A leaves the individuals unascertained, whereas the article the ascertains the individual also."

Harris' Herm's, 215, 217.

"A has an indefinite signification and means one, with some reference to more." Junnson's Dict Grammar.

"A is used in a vague sense to point out one single thing of the kind, in other respects *indeterminate.*"—"a determines it to be one, single thing of the kind, leaving it still *uncetain which.*"

Lowth's Introduction.

Digitized by Google

"A is styled the indefinite article; it is used in a vague sense to point out one single thing of the kind, in other respects indeterminate." Murray's, Gram. p. 29.

So great scholars write, and so their disciples copy! But let us try this rule. Harris wrote, or rather compiled from Greek Grammarians, "A Philosophical luquiry concerning Universal Grammar" —Johns n compiled "A Dictionary of the English Language" Lowth wrote "A short Introduction to the English Grammar" Now I request some of the gentlemen, who teach the rules of these Grammars, to inform the world whether a, in the titles recited, denotes one thing of the kind, in other respects indeterminate. This request I presume to be a reasonable one, as it certainly is a determinate one.

2

NOTE. — When the sense of words is sufficiently certain, by the, construction, the definitive may be omitted as *Duty* to your majesty, and *regard* for the preservation of curselves and our posterity, require us to entreat your reyal attention."

It is also omitted before names whose signification is general, and requires no limitation—as "*wisdom* is justified of her children"— "anger resteth in the bosom of fools."

Suppose a man to have received a severe wound, a fracture of the leg, or of the skull; however indeterminate the man may be, his grammar: will hardly convince him that a broken head or leg is a very indeterminate thing.

Charles erected a buge Colossus at Rhodes—Romulus built a city in Italy and called it. Rome—Great-Britain has a navy superior to any out the ocean—Love to God is an indispensable duty—Virgil composed an epic poem—The Earl of Chatham was an emineut statesman—Oxygen is a substance which forms acids—the carbouic acid is a combination of oxygen and carbon—the air is an invisible elastic fluid—Lisbon was destroyed by an earthquake in 1765 that is, according to our grammars, any earthquake, uncertain which.

The bistory of this word is briefly this. An and one are the same word—an, the Saxon or English orthography, and one a corruption of the French, un or une. The Greek en, the Latin unus, that is, un with the usual ending of adjectives, and the Saxon an or ane, are mere dialectical differences of orthography, as are the German ein and the Dutch een. Before the conquest an was used in computation or numbering-an, twa, three-one, two, three, &c.; and the n was used before articulations, as well as before vowels—"Ac him sæd hyra an"-But to him said one of them -Alfred Orosius, kb. 6. 30. "An cyning"-one king.-Sax. Chron. p. 82. This word was also varied to express case and gender, like the Latin unus. "And thæs ymb anne monath"-And within this one month.-Sax, Chron. 82. "The on tham anum scipe wazeron"-Who were in that one ship.-ibm. 98. An therefore is the original English adjective or ordinal number one; and was never written a until after the conquest.

The conquest, with other innovations, introduced into books the French un, une, from the Latin unus; the French being the only court language for three or four centuries. But the English an was retained in popular usage; and both words, or rather both orthographies, maintained their ground--but the meaning of both is precisely the same. The only differences between the words are therein is no longer used in arithmetic or as an ordinal number--though its only signification is unity--nor can we use an as a substitute without a noun, as we do, one-John is one of them. But although an cannot, in these applications, be used for one, the latter can always be used for an.

Hence we see that an or a is a mere adjective; or as I should call it, an attribute expressing unity, and, grammatically considered, it has no character which is not common to every ordinal number in

3

The definitive a is used before plural names, preceded by few or many—as a few days, a great many persons.^{*} It is also used before any collective word, as, a dozen, ahundred, even when such words are attached to plural nouns; as a hundred years.

It is remarkable that a never precedes many without the intervention of great between them—but follows many, standing between this word and a name—and what is equally singular, many, the very essence of which is to mark plurality, will, with a intervening, agree with a name in the singular number; as

"Full many a gem of purest ray serene." Gray.

"Where many a rose bud rears its blushing head." Beattie.

RULE III.

The definitive the is employed before names, to limit their signification to one or more specific things of the

the language. It has not the smallest effect in marking the indetarminateness of names. So far is this word from affecting the soun, in regard to its definiteness, that its own character of definiteness or indefiniteness, depends, like that of other attributes, upon the name to which it is prefixed. "Bring me an apple," is indefinite—any apple; "Solomon built a temple"—is definite, as he built but one, and that is known or determinate. "Bring me two oranges," is indefinite; "Christ was crucified between two thieves," is definite —and so every number in the language.

Hence also we observe the mistake in all English grammars, that s becomes an before a vowel. The fact is the reverse; an becomes a before an articulation—an being the original word.

In the German, Dutch and French, this word is called an article also, but the article and the ordinal number are not distinguished in orthography, and the word, even when absurdly called an article, is varied to express gender and case—German ein, eine, ein— Dutch een, eene—French un, une.

* The origin of this use of a before many is to be sought in the primitive character of many, which was a noun in the Gothic and Saxon, synonymous with multitude. A many was therefore correct. Its use as an attribute is secondary or derivative; but this use carries with it the definitive a, is anomalous phrases

kind, discriminated from others of the same kind. Hence the person or thing is understood by the reader or hearer, as the twelve Apostles, the laws of morality, the rules of good breeding.

This definitive is also used with names of things which exist alone, or which we consider as single; as, the Jews, the Sun, the Globe, the Ocean—And also before words when used by way of distinction, as the Church, the Temple.

RULE IV.

The is used rhetorically before a name in the singular number, to denote the whole species, or an indefinite number; as "the fig-tree putteth forth her green figs."

Sol. Song.

"The almond tree shall flourish, and the grasshopper shall be a burden."—"Or ever the silver cord shall be loosed—or the golden bowl be broken," &c. Ecclesiastes.

"There loaded camels move in solemn state,

"And the huge elephant's unwieldy weight."

Hoole's Tasso, b. 15.

"For here the splendid treasures of the mine, And richest offspring of the field combine."

Lusiad. 2.

"The Christian, who, with pious honor, avoided the abominations of the circus or the theatre, found himself encompassed with infernal snares, &c.

Gib. Rom. Emp. ch. 15.

"The heart likes naturally to be moved and affected." Campbell's Rhet. ch. 2.

NOTE 1.—This definitive is also used before names employed figuratively in a general sense, as

"His mates their safety to the waves consign." Lusiad 2.

Here uses cannot be understood of any particular waves; but the word is a metaphor for a particular thing, the ocean-

PRACTICAL GRAMMAR.

NOTE 2.—Names are also restricted in their signification by othor definitives, by various attributes, and any words of description which discriminate one thing from another, as

"See barbarous nations at thy gales attend, Walk in thy light, and in thy temples bend."	Pope's Messial.
" From every face he wipes off every lear."	Jbm.
, " The tender lambs he raises in his arms."	Iom.
"These swell their prospects and exalt their p	ride."

Rape of the Lock

"For spirits, freed from mortal laws, with ease Assume what sears and what shapes they please." Hem.

1.

In addresses and exclamations, the definitive may be, and usually is, omitted—as "Sink down, ye mountains, and ye vallies rise"—

"Be smooth, ye rocks,; ye rapid floods, give way." Pope Mes.

"Granville commands; your aid, O Muses, bring." Wind. forest

Note 3.—The definitive the is used before an attribute, which is selected from others belonging to the same object; as "The very frame of spirit proper for being diverted with the laughable in objects, is so different from that which is necessary for philosophizing on them." Campbell Rhet. 1. 2.

Number.

As men have occasion to speak of a single object, or of two or more individuals of the same kind, it has been found necessary to vary the noun or name, and usually the termination, to distinguish plurality from unity. The different forms of words to express one or more are called in Grammar, numbers; of which there are in English, two, the singular and the plural. The singular denotes an individual, or a collection of individuals united in a body; as, a man, a ship, an office, a company, a society, a dozen. The plural denotes two or more individuals, not cunsidered as a collective body; as, men, ships, offices, companies, societies. The plural number is formed by the addition of s or es to the singular.

Digitized by Google

17

RULE 1. When the terminating letter of a noun will admit the sound of s to coalesce with the name or the last syllable of it, s only is added to form the plural; as sea, seas; hand, hands; pen, pens; grape, grapes; vale, vales; vow, vows.

2. When the letter s does not combine in sound with the word or last syllable of it, the addition of s increases the number of syllables; as, house, houses; grace, graces; page, pages; rose, roses; voice, voices; maze, mazes.

3. When the name ends in x, ss, sh, or ch with its English sound, the plural is formed by adding es to the singular; for a single s after those letters cannot be pronounced; as, fox, foxes; glass, glasses; brush, brushes; church, churches. But after ch with its Greek sound, like k, the plural is formed by s only; as monarch, monarchs.

4. When a name ends with y after a consonant, the plural is formed by dropping y and adding ies; as, vanity, vanities. Alkali has a regular plural, alkalies.

But after ay, ey, and oy, s only is added; as, delay, delays; valley, valleys; joy, joys; money, moneys.

NOTE 1-We sometimes see valley, chimney, money, journey, and a few others, with like terminations, written in the plural with its-vallies, chimnies, &c. But this irregularity is not to be vindicated. Either the singular number should be written vally, or the plural salleys. The latter is preferable.*

NOTE 2—A few English nouns deviate from the foregoing rules in the formation of the plural number :--

* The change of y into ies to form the plural number, may seem to a foreigner an odd irregularity; but the cause is very obvious. Formerly the singular number of this class of words, ended with ie as, glorie, vanitie, energie, and the addition of s made the plural glories. But whether from caprice, negligence, or a desire to simplify the orthography, the termination ie was laid aside for y is the singular number, while the old plural ies was retained. A strange inconsistency, but by no means the only one which the progress of our language exhibits.

PRACTICAL GRAMMAR.

CLASS 1. In some names, f in the singular, is for the convenience of utterance, changed into v; as,

life	lives	self	selves	sheaf	sheaves
knife	knives	balf	halves		shelves
wife	wives	beef	bee ves	wolf	wolves
leaf	leaves	staff	staves	wharf	wharves
calf	calves	loaf	loaves		thieves

CLASS 2. The second class consists of words which are used in both numbers, with plurals irregularly formed; as,

child	children	hypothesis	hypotheses
foot	feet	brother	brothers or brethren
tooth	teeth	penny	pennies or pence
man	men	die	dies or dice
woman	women	pea	peas or pease
∕OX	oxen ·	criterion	criterions or criteria
louse	lice	focus	focuses or foci
goose	geese	radius	radiuses or radii
beau	beaux	index	indexes or indices
thesis	theses	calx	calxes or calces
emphasis antithesis	emphases antitheses	phenomenon	phenomena

Pennies is used for real coins; pence for their value in computation.—Dies denotes stamps for coining; dice, pieces used in games.—Peas denotes the seeds as distinct objects; pease the seeds in a mass.—Brothers is the plural used in common discourse; brethren, in the scripture style, but is not restricted to it.

Cherabim and Seraphim are real Hebrew plurals; but such is the propensity in men to form regular inflections in language, that these words are used as in the singular, with regular plurals, cherubims, seraphims. In like manner, the Hebrew singulars, cherub and seraph, have obtained regular plurals.

The influence of this principle is very obvious in other foreign words, which the sciences have enlisted into our service; as may be observed in the words radius, focus, index, &c. which now begin to be used with regu-. lar English plural terminations. This tendency to regularity is, by all means, to be encouraged; for a prime excellence in language is the uniformity of its inflections. The facts here stated will be evinced by a few authorities.

"Vesiculated corallines are found adhering to rocks, shells and fucuses." Encyc. art. Corallines.

"Many fetuses are deficient at the extremities." Dar. Zoon. Sect. 1, 3, 9.

"Five hundred denariuses." Baker's Livy, 4. 491.

"The radiations of that tree and its fruit, the principal *focuses* of which are in the Moldavia islands."

Hunter's St. Pierre, vol. 3.

"The reduction of metallic *calxes* into metals." Ency. art. Metallurgy.

See also Mediums Campbell's Rhetoric, 1, 150—Calyxes Darwin's Zoon. 1, 74, Caudexes. Phytologia, 2, 3. Irises Zoon, 1. 444. Reguluses and residuums. Encyc. art. Metal.

In authorities equally respectable, we find stamens, stratums, funguses; and in pursuance of the principle, we may expect to see lamens for lamina; lamels for lamellæ; baryte for barytes; pyrite for pyrites; strontite for strontites; stalactite for the plural stalactites. These reforms are necessary to enable us to distinguish the singular from the plural number.

CLASS 3. The third class of irregulars consists of such as have no plural termination; some of which represent ideas of things which do not admit of plurality; as rye, barley, flax, hemp, flour, sloth, pride, pitch, and the names of metals, gold, silver, tin, zink, antimony, lead, bismuth, quicksilver. When, in the progress of improvement, any thing, considered as not susceptible of plurality, is found to have varieties, which are distinguishable, this distinction gives rise to a plural of the term. Thus in early ages our ancestors took no notice of different vari-

20

eties of wheat, and thaterm had no plural. But modern improvements in agriculture have recognized varieties of this grain, which have given the name a plural form. The same remark is applicable to fern, clay, marl, sugar, cotton, &c. which have plurals, formerly unknown. Other words may hereafter undergo a similar change.

Other words of this class denote plusality, without a plural termination; as cattle, sheep, swine, kine, deer, hose; trout, salmon, carp, perch, and many other names of fish. Fish has a plural, but is used in the plural sense without the termination; as,

"We are to blame for eating these fish." Anarcharsis 6. 272.

" The fish reposed in seas and crystal floods,

"The beasts retired in covert of the woods." Heele T. 2. 726.

Cannon, shot and sail, are used in a plural sense, as

"One hundred cannon were landed from the fleet." Burchett Naval Hist. 732.

"Several shot being fired" Ibm. 455.

"Several sail of ships" Ibm. 426.

In the sense in which these words are here used, they loardly admit of a plural ending.

Under this class may be noticed a number of words, expressing time, distance, measure, weight and number, which, though admitting a plural termination, are often, not to say generally, used without that termination, even when used with attributes of plurality; such are the names in these expressions, two year, five mile, ten foot, seven pound, three tun, hundred, thousand, or million, five bushel, twenty weight. &c. Yet the most unlettered people never say, two minute, three hour, five day, or week, or month; nor two inch, yard or league; nor three ounce, grain, dram, or peck.

We observe this practice in the Saxon Chronicle. "He heold that Arcebisceop-rice 18 year."-p. 59. He held that archbishopric eighteen year. In that work, winter is used in the same manner; forty-one winter—p. 41. Yet year and winter had, in the Saxon, plural terminations.

A like singularity is observable in the Latin language. "Tritici quadraginta millia modium." Liv. lib. 26. 47. Forty thousand modium of wheat. "Quatnor millia pondo auri," four thousand pound of gold. Ibm. 27. 10.

Here we see the origin of our pound. Originally it was merely weight—four thousand of gold by weight. From denoting weight generally, pondo became the term for a certain division or quantity; retaining however its signification of unity, and becoming an indeclinable in Latin. Twenty pound then, in strictness, is twenty divisions by weight; or as we say, with a like abbreviation, twenty weight. These abbreviations are the wings of mercury.

The words horse, foot and infantry, comprehending bodies of soldiers, are used as plural nouns and followed by verbs in the plural. Cavalry is sometimes used in like manner.

CLASS 4. The fourth class of irregular nouns consists of words which have the plural termination only. Some of these denoting plurality, are always joined with verbs in the plural; as the following:

Annals	drawers	lees	customs	,
archives	downs	lungs	shears	
ashes	dregs	matins	scissors	4
assets	embers	mallows	shambles	
betters	entrails	orgies	tidings	
bowels	fetters	nippers	tongs	
compasses	filings	pincers or	thanks	
clothes	goods	pinchers	vespers	
calends	hatches	pleiads	vitals	
breeches	ides	snuffers	victuals	

Letters in the sense of literature, may be added to the foregoing list. Manners, in the sense of behavior, is also plural.

PRACTICAL GRAMMAR.

Other words of this class, though ending in s, are used either wholly in the singular number, or in the one or the other, at the pleasure of the writer.

Amends	wages	conics	economics
alms	billiards	catoptrics	mathematics
bellows	fives	dioptrics	mechanics
gallows	sessions	acoustics	hydraulics
odds	measles	pneumatics	hydrostatics
means	hysterics	statics	analytics
pains	physics	statistics	politics
news	ethics	spherics	-
riches	optics	tactics	

Of these, pains, riches, and wages^{*} are more usually considered as plural—news is always singular—odds and means are either singular or plural—the others are more strictly singular; for measles is the name of a disease, and in strictness, no more plural than gout or fever. Small pox, for pocks, is sometimes considered as a plural, but it ought to be used as singular. Billiards has the sense of game, containing unity of idea; and ethics, physics and other similar names, comprehending each the whole system of a particular science, do not convey the ideas of parts or particular branches, but of a whole collectively, a unity, and hence seem to be treated as words belonging to the singular number.

AUTHORITIES.

Pre-eminent by so much odds. Milt. P. L. 4. 474.

With every odds thy prowess I defy.

Hoole Tas. 6. 19. 40.

Where the odds is considerable. Camp. Rhet. ch. 5.

The wages of sin is death. Bible.

Much pains has been taken. Enfield Hist. Phil. ch. 2.

Let a gallows be made of fifty cubits high. Bible.

* Originally wagis, and really singular.

Here he erected a fort and a gallows. Lasiad 1. 134.

The riches we had in England was the slow result of long industry and wisdom, and is to be regained, &c. Davenant, 2. 12.

Mathematics informs us. Encyc. art. strength of Materials.

Politics is the art of producing individual good by general measures. Beddoes' Hygeia. 2. 79.

Politics contains two parts. Locke, vol. 2. 408.

Locke however uses a plural verb with ethics. "The ideas that ethics are conversant about."—B. 4. 12. 8.

Pains, when preceded by much, should always have a singular verb.

Means is so generally used in either number, every means, all means, this means, and these means, that authorities in support of the usage are deemed superfluous.

Gender.

GENDER, in grammar, is a difference of termination, to express distinction of sex.

There being two sexes, male and female, words which denote males are said to be of the masculine gender; those which denote females, of feminine gender. Words expressing things without sex, are said to be of neuter gender. There are therefore but two genders; yet for convenience the neuter is classed with the genders; and we say there are three, the masculine, feminine and neuter. The English modes of distinguishing sex are these:

1. 'The regular termination of the feminine gender, is ess; which is added to the name of the masculine; as lion, lioness. But when the word ends in or, the feminine is formed by retrenching a vowel, and blending two syllables into one; as actor, actress. In a few words, the feminine gender is represented by ix, as testatrix, from testator; and a few others are irregular. The following are most of the words which have a distinct termination for the feminine gender:

gen-

The

ave 🕯

every at auluous

ion, to

which those rds exer genfor conand we neuter. e:

nder, is as lion, inine is syllables tennine estator; are most for the

2. In many instances, animals, with which we have most frequent occasions to be conversant, have different words to express the different sexes; as man and woman; brother and sister; uncle and aunt; son and daughter; boy and girl; father and mother; horse and mare; bull and cow.

Man however is a general term for the whole race of mankind; so also, horse comprehends the whole species. A law to restrain every man from an offence would comprehend women and boys; and a law to punish a trespass committed by any horse, would comprehend all mares and colts. In like manner, goose, though originally the name of the female, is used generally for the whole species; as is the plural geese.

3. When words have no distinct termination for the female sex, the sexes are distinguished by prefixing some word indicating sex; as a male rabbit, a female oppossum; a he goat, a she goat, a man servant, a maid servant; a male-coquet; a female-warrior; a cock-sparrow, a hen-sparrow.

4. In all cases, when the sex is sufficiently indicated by a separate word, names may be used to denote females without a distinct termination. Thus, although females are rarely soldiers, sailors, philosophers, mathematicians or chemists, and we seldom have occasion to say, she is a soldier, or an astronomer; yet there is not the least impropriety in the application of these names to females, when they possess the requisite qualifications; for the sex is clearly marked by the the word she or female, or the appropriate name of the woman; as "Joan of Arc was a warrior." "The Amazons, were a nation of female warriors." Ency. art. Amazons.*

5. Although the English language is philosophically correct in considering things without life as of neither gender, yet by an easy analogy, the imagination conceives of inanimate things as animated and distinguished by sex. On this fiction, called *personification*, depends much of the descriptive force and beauty of poetry. In general, those objects which are remarkable for their strength, influence, and the attribute of imparting, take the masculine gender; those which are remarkable for the more mild and delicate qualities, for beauty and the attribute of producing, become feminine; the sun darts *his* scorching rays; the moon sheds *her* paler light.

" Indus or Ganges rolling his broad wave." Akenside.

"There does the soul

Consent her soaring fancy to restrain." ibm.

"Now morn ker rosy steps in th' eastern clime Advancing—" Milton P. L. b. 5.

"The north east spends his rage." Thompson.

• The termination or in Latin, is a contraction of vir, a man; as er in English is of wer, the same word in Saxon. But in common anderstanding, the idea of gender is hardly attached to these terminations; for we add er to words to denote an agent, without life, as grater, heater.

CASE in Grammar denotes a variation of words to express the relation of things to each other. In English, most of the relations are expressed by separate words; but the relation of property, ownership or possession, is expressed by adding s to a name, with an apostrophy; thus, John's book; which words are equivalent to "the book of John." This is called the *Possessive Case*. In English therefore names have two cases only, the nominative or simple name, and the possessive. The nominative before a verb and the objective after a verb are not distinguished by inflections, and are to be known only by position or the sense of the passage.

When the letter s, added as the sign of the possessive, will coalesce with the name, it is pronounced in the same syllable; as John's. But if it will not coalesce, it adds a syllable to the word, as Thomas's bravery, pronounced as if written Thomasis—the Church's prosperity, Churchis prosperity. These examples show the impropriety of retrenching the vowel; but it occasions no inconvenience to natives.

When words end in es or ss, the apostrophy is added without e; as on eagles' wings; for righteousness' sake.

Pronouns or Substitutes.

SUBSTITUTES or pronouns are of two kinds; those which are used in the place of the names of persons only, and may be called *personal*; and those which represent names, attributes, a sentence or part of a sentence, or a series of propositions.

The pronouns which are appropriate to persons, are, I, thou, you, he, she, we, ye, and who.

I is used by a speaker to denote himself, and is called the *first person* of the singular number.

When a speaker includes others with himself, he uses we—This is the first person of the plural number.

Thou and you represent the person addressed—thou in solemn discourse, and you, in common language.* These

As you was originally in the plural number, grammarians insist that it must still be restricted to that number. But national usage rejects the arbitrary principle. The true principle, on which all language is built, rejects it. What fundamental rule have we to dispose of words, but this, that when a word signifies, one, or unity, it belongs to the singular number? If a word, once exclusively plural, becomes, by universal use, the sign of individuality, it must take its place in the singular number. That this is a fact with you, is proved by national usage. To assign the substitute to its verb, is to invert the order of things. The verb must follow its nominative—if that denotes unity, so does the verb.

"When you was at Athens you attended the schools of the philosophers." Cicero Tusc. Quest. Trans. b. 2.

"On that happy day when you was given to the world." Doda's Massillon, Serm. 1.

"Unless you was ill." Boswell's life of J. Æ. 68.

"You was on the spot where your enemy was found killed." Guthrie's Quinctilian. b. 2.

"You was in hopes to have succeeded to the inheritance." ibm. b. 5.

"When you was here comforting me." Pope Let.

"I am as well as when you was here." Gay's Let. to Swift.

"Why was you glad?" Boswell's life of Johnson.

These writers did not commit mistakes in the use of the verb after you—they wrote the laguage as established by national usage—the foundation of all language. So is the practice in the United States —not merely popular usage, though this, when general, is respectable authority; but the practice of men of letters.

"Where was you standing during the transaction ?"

"How far was you from the defendant?"

"How far was you from the parties?" Judge Parker. Trial of Selfridge. p. 58.

"Was you acquainted with the defendant at College?" Mr. Dezter. ibm. p. 60.

"Was you there when the pistol was fired?" Mr. Gore. Ibm. 65.

"Was you in the Office ?" Att. Gen. Hm. 68.

are the second person. In the plural, ye is used in solemn style and you in familiar language.

He represents the name of a male, and she, that of a female, who is the subject of discourse, but not directly addressed. These are called the *third person*,

It is a substitute for the name of any thing of the neuter gender in the third person, and for a sentence.

They is a substitute for the names of persons or things, and forms the third person of the plural number.

Who is a relative or a personal pronoun, used to introduce a new clause or affirmation into a sentence, which clause has an immediate dependence on the preceding one.* Who is also used to ask questions, and hence it is called an interrogative.

Which is also a relative, but is of neuter gender. It is also interrogative.

These pronouns have two cases; the nominative which precedes a verb, and the objective which follows it. They are inflected in the following manner.

Sing. Plu.	Sing. Plu.
Nominative I† we	Nom she they
Objective me us	Obj her them
Nom thou ye	Nom it they
Obj thee you	Obj it them
Nom you you	Nom who who
Obj you you	Obj whom whom
Nom he they Obj him them	

* Who is called a *relative*, because it *relates* to an antecedent. But this is also true of he, she, they and most of the substitutes. They all *relate* to the words which they represent.

t Me is also used in the nominative, in popular practice—it is me. This is condemned as bad English; but in reality is an original idiom of the language, received from the primitive Celtic inhabitants of England and France, in whose language mi was the nominative case of the first personal pronoun. The French language retains the same word, from the same original, in the phrase c' est moi—it is L

3*

Digitized by Google

Norz.—Mine, thine, his, hers, yours and theirs, are usually considered as the *possessive case*. But the three first are either attributes, and used with nouns, or they are substitutes. The three last are always substitutes, used in the place of names which are understood, as may be seen in the note below.*

Its and whose have a better claim to be considered as a possessive case; but as they equally well fall under the denomination of attributes, I have, for the sake of uniformity, assigned them a place with that part of speech.

But it must be observed, that although it and who are real substitutes, never united to names, like attributes—it day—who man; yet its and whose cannot be detached from a name expressed or im—" plied—as, its shape, its figure—whose face—whose works—whose are they? that is, whose works. These are therefore real attributes.

*That mine, thine, his, yours, hers and theirs, do not constitute a possessive case, is demonstrable; for they are constantly used as the nominatives to verbs and as the objectives after verbs and prepositions, as in the following passages. "Whether it could perform its operations of thinking and memory out of a body organized as ours is,"—Locke, b. 2. 27. "In referring our ideas to those of other men called by the same name, ours may be false."—"It is for no other reason but that his agrees not with our ideas."—ibm. ch. 32. 9 and 10.

"You may imagine what kind of faith theirs was. Bacon. Unity in Religion.

"He ran headlong into his own ruin whilst he endeavoured to precipitate ours." Bolingbroke. Let. to Windham.

"The reason is that his subject is generally things; theirs, on the contrary, is persons." Camp. Rhet. b. 1. ch. 10.

"Yours of the 26th Oct. I have received, as I have always done yours, with no little satisfaction."—Wycherley to Pope.

"Therefore leave your forest of beasts for ours of brutes, called men." Ibm.

"These return so much better out of your hands than they went from mine." Ibm.

"Your letter of the 20th of this month, like the rest of yours—tells me with so much more wit, sense and kindness than mine can express," &c. Ibm.

"Having good works enough of your own besides to ensure yours and their immorality." Ibm.

"The omission of repetitions is but one, and the easiest part of yours and of my design." Pope to Wycherley.

In the use of substitues, it is to be remarked, that *I*, thou, you, ye and we are generally employed without an antecedent name. When *I*, and the name of the person are both employed, as they are in formal writings, oaths and the like, the pronouns precede the name; as "I, Richard Roe, of Boston." In similar language, you and we also precede the name as "You, John Dae, of New-York." "We, Richard Roe and John Doe, of Philadetphia."

Vou is used by writers very indefinitely, as a substitute for any person who may read the work—the mind of the writer *imagining* a person addressed.

"My sword and yours are kin." Shakspeare.

It is needless to multiply proofs. We observe these pretended possessives uniformly used as nominatives or objectives. To say that, in these passages, ours, yours, theirs, and mine form a possessive case, is to make the possessive perform the office of a nominative case to werbs, and an objective case after verbs and prepositions.—a manifest solecism.

Should it be said that a noun is understood; I reply, this cannot be true, in regard to the grammatical construction; for supply the noun for which the word is a substitute, and the pronoun must be changed into an adjective. "Yours of the 26th of October," becomes your letter—"the endeavoured to precipitate ours," becomes our ruin." This shows that the words are real substitutes, like others, where it stands for other men or things.

Besides in three passages, just quoted, the word yours is joined by a connective to a name in the same case; "to ensure yours and their immorality." "The easiest part of yours and of my design." "My sword and yours are kin." Will any person pretend that the connective here joins different cases?

Another consideration is equally decisive of this question. If yours, ours, &c. are real possessives, then the same word admits of two different signs of the case; for we say correctly, "an acquantance of yours, ours, or theirs"—of being the sign of the possessive; but if the words in themselves are possessives, then there must be two signs of the same case, which is absurd, t

Compare these words with a name in the possessive case — "My house is on a hill; my father's is on a plain," Here futher's is a real possessive case; the word house being understood; and the addition of the noun makes no alteration in the word father's; "my father's is, or "my father's house is."

+ This case does not compare with that of names. We say a "soldier of the king's "—or a soldier of the king's soldiers—but we cannot say, "an anguaintance of your's acquaintance.

He and they are used in the same indefinite manner; as "He seldom lives frugally, who lives by chance." "Blessed are they that mourn, for they shall be comforted."

He and they, in such sentences, represent any persons who fall within the subsequent description.

Who and whom are always substitutes for persons, and never for things or brutes. Whose is equally applicable to persons as to things.*

Whoever is often employed as the nominative to two verbs; as "Whoever expects to find in the scriptures a specific direction for every moral doubt that arises, looks for more than he will meet with." Paley. Phil. ch. 4.

Mine, thine and his are equally well used as substitutes, or as attributes. "The silver is mine, and the gold is mine." Hag. 2. 8. "The day is thine, the night also is thine." Ps. 74. 16. "The lord knoweth them that are his." 2. Tim. 2. 19. In these examples the words, mine, thine, his, may be considered as substitutes—"The silver is mine," that is, my silver.

In this character the words usually follow the verb; but when emphatical, they may precede it; as "*His* will I be." 2. Sam. 16. 18. Thine, O Lord, is the greatness, the power and the glory." "*Thine is the kingdom.* 2. Ch. 29. 11.†

*"Whose is rather the poetical, than the regular genitive of which." Johnson. Lowth also condemns the use of whose, in the neuter gender, citing, at the same time, the most respectable authorities for this use—Dryden, Milton and Addison. "The question whose solution I require"--""the tree whose mortal taste"--But these critics seem not to have penetrated to the bottom of this usage. The truth is, who and its inflections are a part of the primitive language. The Latin qui, cui, quo, qua, are the English who--quem and quad are whom and what--cujus is whose. The Scots formerly wrote quha, quhat, the Saxons, hwa.--The Germans still use wer, wessen, were; the Dutch, wie, wiewu, wien. In a fragment of the Laws of Numa, cujus is spelt quoius--We have this word in whose. From the time of Numa, at least this genitive has been of all genders, and I believe, remains so, in all branches of the Teutonic. It is better classed with adjectives or attributes, like his.

+ In addition to the proofs already alleged, that these words are not a possessive case, according to the usual acceptation of the word, we may remark, that mine, thine and his, in the passages used

Digitized by Google

These words are also used as attributes of possession; as "Let not mine enemies triumph. "So let thine enemies perish." "And Abram removed his tent." Mine and thine are however not thus used in familiar language; but in solemn and elevated style, they are still used as attributes.

"Mine eyes beheld the messenger divine." Lusiad. B. 2.

There is another class of substitutes, which supply the place of names, attributes, sentences or parts of a sentence.

It.

In the following sentence, *it* is the substitute for a name, "The sun rules the day; *it* illumines the earth;" here *it* is used for *sun*, to prevent a repetition of the word.

In the following passage *it* has a different use. "The Jews, *it* is well known, were at this time under the dominion of the Romans." *Porteus lect.* 8. Here *it* represents the whole of the sentence, except the clause in which it stands. To understand this, let the order of the words be varied. "The Jews were at this time under the dominion of the Romans, *it* [all that] is well known.

in the text, do not stand in the place of of me, of thee, of him. The silver is of me, the gold is of me, the day is of thee, the Lord knoweth them that are of him, do not convey the same ideas, as the present form of expression. Of, in these expressions, would rather imply proceeding from.

Besides, the same words admit of the sign of the possessive; as, "And the man of thine, whom I shall not cut off from mine altar." 1 Sam. 2. 33. "Sing to the Lord, all ye saints of his." Ps. 30. 4. "He that heareth these sayings of mine." Matt. 7. When we say "a soldier of the king's," we mean one of the king's soldiers; and in the passage here cited from Samuel, "the man of thine," has a like sense—"the man of thy men," that is, any one of them. But in the passages from Psalms and Matthew, the words "all ye saints of his," "these sayings of mine," are evidently meant to include the whole number. It is therefore impossible to resolve these passages, without considering mine, thine and his as substitutes, in the same case, as the nouns would be, which they represent. It is a testimony as glorious to his memory, as it is singular, and almost unexampled in his circumstances, that he loved the Jewish nation, and that he gave a very decisive proof of it, by building them a synagogue." ibm.

To discover what is represented by the first it, we must inquire, what is a glorious testimony? Why clearly that he loved the Jewish nation, and gave them a decisive proof of it, by building them a synagogue. It then is a substitute for those clauses of the sentence. The second it, refers to the same clauses. In the latter part of the sentence, he gave a magnificent proof of it—of what? of what is related in a preceding clause—He loved the Jewish nation—of that he gave a decisive and magnificent proof. Here it represents that member of the sentence.

"As for the pulling of them down, if the affairs require it." Bacon on Ambition. Require what? "The pulling of them down"—for which part of the sentence, it is a substitute.

"Shall worldly glory, impotent and vain, That fluctuates like the billows of the main; Shall this with more respect thy bosom move Than zeal for crowns that never fade above? Avert it heaven." Hoole's Tasso. 6. 5.

Avert what ? All that is expressed in the four preceding lines, for all which, *it* is a substitute.

"And how could he do this so effectually, as by performing works, which *it* utterly exceeded all the strength and ability of men to accomplish." Porteus Lect. 5.

What utterly exceeded? To what does it refer? Let us invert the order of the words.—" as by performing works to accomplish which exceeded all the strength of men." Here we find to accomplish, a verb in the infinitive, is the nominative to exceeded, and for that verb, it is a substitute.

This inceptive use of *it* forms a remarkable idiom of our language, and deserves more particular illustration. It stands as the substitute for a subsequent member or clause of a sentence; and is a sort of pioneer to smooth the way Thus "It is remarkable, that the philosofor the verb. pher Seneca makes use of the same argument." Porteus Lect. 6. If we ask, what is remarkable? The answer must he, the fact stated in the last clause of the sentence. That this is the real construction, appears from a transposition of the clauses "The philosopher Seneca makes use of the same argument, that is remarkable." In this order we observe the true use of that, which is also a substitute for the preceding clause of the sentence, and it becomes redundant. The use then of the inceptive it appears to be to enable us to begin a sentence, without placing a verb as the introductory word; and by the use of it and that as substitutes for subsequent members of the sentence, the order is inverted without occasioning obscurity.

It is to be noticed also that this neuter substitute, *it*, is equally proper to begin sentences, when the name of a *person* is afterwards used; as "*It* was John who exhibited such powers of eloquence." But if we transpose the words, and place who or that, the substitute which begins a new clause, next after the inceptive word, we must use he for the inceptive—"*He*, who or that exhibited such powers of eloquence, was John."

In interrogative sentences, the order of words is changed, and *it* follows the verb. Who is *it* that has been thus eloquent?

There is a sentence in Locke, in which the inceptive, *it* is omitted "Whereby comes to pass, that, as long as any uneasiness remains in the mind. *B. ch.* 21. In strictness, this is not a defective sentence, for *that* may be considered as the nominative to *comes*. Whereby *that* comes to pass which follows. Or the whole subsequent sentence may be considered as the nominative—for all that comes to pass. But the use of the inceptive *it* is so fully established as the true idiom of the language, that its omission is not to be vindicated.

A PHILOSOPHICAL AND

This and that, these and those.

This and that are either definite attributes, or substitutes. As attributes, they are used to specify individuals, and distinguish them from others; as, "This my son was dead and is alive again." "Certainly this was a righteous man.". "The end of that man is peace." "Wo to that man by whom the son of man is betrayed." This and that have plurals, these and those.

The general distinction between this and that, is, this denotes an object to be present or near in time or place; that, to be absent. But this distinction is not always observed. In correspondence however with this distinction, when, in discourse, two things are mentioned, this and these refer to the last named, or nearest in the order of construction; that and those to the most distant; as

"Self love and reason to one end aspire, Pain their aversion, pleasure their desire; But greedy that [self love] its object would devour, This [reason] taste the honey and not wound the flower." Pope.

"Some place the bliss in action, some in ease, Those call it pleasure, and contentment these. ibm.

The poets sometimes contrast these substitutes in a similar manner, to denote individuals acting or existing in detached parties; or to denote the whole acting in various capacities; as

"'Twas war no more, but carnage through the field, Those lift their sword, and these their bosoms yield." Hoole's Tasso. b. 20.

"Nor less the rest, the intrepid chief retain'd; These urged by threats, and those by force constrain'd." ibm.

There is a peculiarity in the use of *that*; for when it is an attribute, it is always in the singular number; but as a substitute for persons or things, it is plural as well as

,

- PRACTICAL GRAMMAR.

cingular; and is used for persons as well things more frequently than any word in the language; as

"I knew a man that had it for a bye word, when he saw men hasten to a conclusion, "Stay a little that we may make an end the sooner." Bacon on Despatch.

Here that is the representative of man, and it stands for the last clause of the sentence or bye-word.

"Let states that aim at greatness take heed how their nobility and gentlemen multiply too fast. Bacon.

Here that is a substitute for a plural name. So also in the following. "They that are whole need not a physician, but they that are sick." "They that had eaten were about four thousand"—"they that are in the flesh"— "they that weep"—" bless them that curse you."

Another very common use of this and that, is to represent a sentence or part of a sentence; as

"It is seldom known that, authority thus acquired is possessed without insolence, or that, the master is not forced to confess that, he has enslaved himself by some foolish confidence. Rambler, No. 68.

In this sentence, the first that represents the next member-"'Authority thus acquired is possessed without insolence, that is seldom known," it represents the same clause. The second that represents all which follows. including two clauses or members-the third that is the substitute for the last clause. In strictness the comma ought always to be placed after that; which punctuation would elucidate the use of the substitute and the true construction, but the practice is otherwise-for that, in this and like sentences, is either a nominative or an ob-The first that in the foregoing sentence is jective. the nominative, coinciding with it, or in apposition to it; and when the clauses are transposed, the inceptive it, being redundant, is dropped, and that becomes the nomina-The same remark is applicable to the second that ; tive. the verb and first clause, it is seldom known, being understood. The third that is the objective after confess. "The master has enslaved himself by some foolish confidence—he is forced to confess that—all that is seldom known."

Such is the true construction of sentences—the definitive *that*, instead of being a conjunction, is the representative of a sentence or distinct clause, preceding that clause, and pointing the mind to it, as the subject which follows. And it is as definite or demonstrative in this application to sentences, as when it is applied to a name or noun.

The following sentence will exhibit the true use of *that* as a substitute—" He recited his former calamities; to which was now to be added *that* he was the destroyer of the man who had expiated him.

Beloc's Herodotus. Clio. 45.

According to our present grammars, that is a conjunction; if so, the preceding verb was, has no nominative word. But the sense is, "to which was to be added that" which is related in the following words.

The use and importance of this substitute are more clearly manifest, when it denotes purpose or effect; as in this passage, "And he came and dwelt in a city called Nazareth; that it might be fulfilled which was spoken by the prophets, "He shall be called a Nazarene." Matt. ii. 23. Here that is equivalent to that purpose or effect. —He came and dwelt in Nazereth, for the purpose expressed in what follows. It and which represent the last clause in the sentence--"He shall be called a Nazarene." The excellence and utility of substitutes and abbreviations are strikingly illustrated by this use of that.

This substitute has a similar use in this introductory sentence. That we may proceed—that here refers to the following words. The true construction is, But that we may proceed—but, as will hereafter be shown, denoting supply or something more or further—So that the literal interpretation of the expression is—More that—or further that, we may proceed. It is the simple mode our ancestors used to express addition to what has preceded, equivalent to the modern phrase. Let us add, or we may add what follows, by way of illustrating or modifying the sense of what has been related.

That, like who and which, has a connecting power, which has given to these words the name of relative; in which character, it involves one member of a sentence within another, by introducing a new verb; as "He, that keepeth his mouth, keepeth his life." Prov. 13. In this passage, that keepeth his mouth, is a new affirmation, interposed between the first nominative and its verb; but dependant on the antecedent nominative.

"The poor of the flock, that waited upon me, knew that, it was the word of the Lord. Zech. xi. 11. In this passage we have that in both its characters—the first that is a substitute for *poor* of the flock; the second, for the last clause of the sentence, it was the word of the Lord.

This exposition of the uses of that enables us to understand the propriety of that that joined in construction.

"Let me also tell you that, that faith, which proceeds from insufficient or bad principles, is but little better than infidelity." In this passage, the first that is a substitute for the whole subsequent part of the sentence; the second that is an attribute agreeing with faith—" That faith which proceeds from bad principles is little better than infidelity—let me tell you that." Hence it might be well always to separate the two words by a comma. We now distinguish these words by a stronger emphasis on the last.

"He, whom thou now hast, is not thy husband; in that saidst thou truly." John iv. 16. That is, in that whole declaration.

From these passages and the explanation, we learn that that is a substitute—either for a single word or a sentence; nor has it any other character, except when an attribute.

This is much less frequently a substitute for sentences than that; but is used in this character, as well as in that of an attribute; as "Let no prince measure the danger of discontents by this, whether they be just or unjust; for that were to imagine people to be reasonable, who do of-

į

ten spurn at their own good ; nor yet by this, whether the griefs whereupon they rise be in fact great or small. Bacon on Kingdoms.

Here this, in each part of the sentence, is the representative of the clause in Italics succeeding.

"Can we suppose that all the united powers of hell are able to work such astonishing miracles, as were wrought for the confirmation of the christian religion? Can we suppose that they can control the laws of nature at pleasure, and that with an air of sovereignty, and professing themselves the lords of the universe, as we know Christ did? If we can believe *this*, then we deny, &c. We observe here, *this* represents a series of sentences.

In some cases, this represents a few words only in a preceding sentence, as in the following—" The rule laid down is in general certain, that the king only can convoke a parliament. And this, by the ancient statutes of the realm, he is bound to do, every year or oftener, if need be. Blacks. Comment. B. 1. ch. 2.

If we ask, what is the king bound to do? The answer must be convoke a parliament; for which words alone this is the substitute, and governed by do.

The plurals these and those, are rarely or never used as substitutes for sentences.

Which.

Which is also a substitute for a sentence, or part of a sentence, as well as for a single word; as "if there can be any other way shown, how men may come to that universal agreement, in the things they do consent in, which I presume may be done." Locke on Und. B. 1. 2.

"Another reason that makes me doubt of any innate practical principles, is, that I think there cannot any one moral rule be proposed, whereof a man may not justly demand a reason; which would be perfectly ridiculous and absurd, if they were innate, or so much as self-evident, which every innate principle must needs be."

ibm. Chap. 3.

In this passage the first which represents the next preceding part of the sentence, a man may justly demand a reason—which power of demanding a reason would be ridiculous—The second which, is a substitute for self-evident; which, that is, self-evident, every principle must be.

"Judas declared him innocent, which he could not be, had he, in any respect, deceived the disciples." Porteu. Lect. 2. Here which represents the attribute innocent.

That would equally well represent the same word, with a connective. "Judas declared him innocent, and that he could not be," &c.

"We shall find the reason of it to be the end of language, which being to communicate thoughts"—that is, end of language, and for those words, is which the substitute.

What.

This substitute has several uses. First, it has the sense of that which, as "I have heard what has been alleged."

Secondly—What stands for any indefinite idea, as "He cares not what he says or does." "We shall the better know what to undertake." Locke on Und. 1. 6.

Thirdly—What is an attribute, either in the singular or plural number, and denotes something uncertain or indeterminate; as "In what character, Butler was admitted into that lady's service, is unknown."

Johnson's Life of Butler.

Digitized by Google.

"It is not material what names are assigned to them," Camp. Rhet. 1. 1.

"I know not what impressions time may have made upon your person." Life of Cowp. Let. 27.

"To see what are the causes of wrong judgment." Locke 2. 21.

41

Fourthly—What is used by the poets preceding a name, for the or that which, but its place cannot be supplied by these words, without a name between them; as

"What time the sun withdrew his cheerful light, And sought the sable caverns of the night."

Hoole's Tasso. b. 7.

That is, at the time when or in which.

Fifthly—A principal use of what is to ask questions; as "What will be the consequence of the revolution in France?"

This word has the singular property of containing two ' cases; that is, it performs the office of a word in the nominative and of another in the objective case; as "I have, in what goes before, been engaged in physical inquiries farther than I intended." Locke. 2.8. Here what contains the object after in and the nominative to goes.

What is used with a name as an attribute and a substitute; as "It was agreed that what goods were aboard his vessels, should be landed." Mickle's Discovery of India. 89. Here what goods, are equivalent to the goods which; for, what goods include the nominative to two verbs, were and should be landed. This use of the word is not deemed elegant.

As.

As, primarily signifies like, similar; the primary sense of which is even, equal. It is used adverbially in the phrases, as good, as great, as probable. The sense of which is like or equally good, great or probable. Hence it frequently follows such. Send him such books as will please him." But in this and similar phrases, as must be considered as the nominative to will please; or we must suppose an ellipsis of several words. "Send him such books as the books which will please him, or as those which will please him." So in the following sentences.

"We have been accustomed to repose on its veracity with such humble confidence as suppresses curiosity. Johnson's Life of Cowley.

"All the punishment which God is concerned to see inflicted on sin is only such as answers the ends of government."

"Many wise men contented themselves with such probable conclusions, as were sufficient for the practical purposes of life." Enfield. Hist. Phil. 2. 11.

"The malcontents made such demands as none but a tyrant could refuse." Bolingbroke on Hist. Let. 7.

In the last example, if as is to be considered as a pronoun, or substitute, it is in the objective case.

These and similar phrases are anomalous; and we can resolve them only by supplying the ellipsis, or by considering as in the nature of a pronoun, and the nominative to the verb.

In the following form of expression, we may supply it for the nominative. "Do every thing as was said about mercury and sulphur." *Encyc.*

"As it was said."

In poetry, as supplies the place of such.

" From whence might contest spring and mutual rage, As would the camp in civil broils engage."

Hoole's Tasso.

In prose we should say, " such contest and rage as."

As sometimes refers to a sentence or member of a sentence, and sometimes its place may be supplied by which. "On his return to Egypt, as I learned from the same authority, he levied a mighty army." Beloe Hind.

Which I learned, "On his return to Egypt, he levied a mighty army, which [fact] I learned from the same authority.

As often begins a sentence. "As to the three orders of pronouns already mentioned, they may be called pre-

A PHILOSOPHICAL AND

positive, as may indeed all substantives." Harris. That is, concerning, respecting the three orders, or to explain that which respects the three orders, &c.

Both.

Both is an adjective of number, but it is a substitute also for names, sentences, parts of sentences, and for attributes.

"Abraham took sheep and oxen, and gave them unto Abimelech, and both of them made a covenant."

Genesis 21. 27.

Here both is the representative of Abraham and Abimelech.

"If the blind lead the blind, both shall fall into the ditch." Matt. 15. 14.

"A certain creditor had two debtors—and when they had nothing to pay, he frankly forgave them both."

Luke 7.

"He will not bear the loss of his rank, because he can bear the loss of his estate; but he will bear both, because he is prepared for both." Boling. on Exile.

In the last example, both represents the parts of the sentence in italics.

When it represents two attributes, it may and usually does precede them; as "he endeavored to render commerce both disadvantageous and infamous."

Mickle, p. 159.

As an attribute, it has a like position before names; as "Tousa confessed he had saved *both* his life and his honor." *Ibm.* 160.

"It is both more accurate, and proves no inconsiderable aid to the right understanding of things, to discriminate by different signs such as are truly different."

Campbell's Rhet. 1. 33.

Digitized by Google

In this passage, both represents more accurate, and the following member of the sentence; but the construction is harsh.

"The necessity which a speaker is under, of suiting himself to his audience, both that he may be understood by them, and that his words may have an influence upon them." Camp. Rhet ch. 10.

Here both represents the two following clauses of the sentence. The definitive *the* is placed between both and its noun; as "To both the preceding kinds, the term burlesque is applied." Camp. Rhet. 1. 2.

Same.

The attribute same is often used as a substitute for persons and sentences or parts of a sentence; as "Nothing appears so clearly an object of the mind or intellect only, as the *future* does, since we can find no place for its existence any where else. Not but the same, if we consider, is equally true of the past." Hermes p. 112.

In this ill constructed sentence, same has reference to all which is predicated of the future tense—that is, that it is an object of intellect only, since we can find no place for its existence any where else—The same, all this, is true of the past also.

"For brave and generous ever are the same."

Lusiad. 1.

Many, few, all, any.

These words we often find used as substitutes for names; "For many shall come in my name, saying, I am Christ, and shall deceive many." Matth. 24. 5. "Many are called, but few chosen." 20. 16. "All that come into the tent, and all that is in the tent shall be unclean seven days." Num. 19. 14. "If a soul shall sin against any of the commandments. Lev. 4. 2. "Neither is there any, that can deliver out of my hand." Deut. 32. 39.

First, last, former, latter, less, least, more, most.

are often used as substitutes.

"The victor's laurel, as the martyr's crown, The first I hope, nor less the last I prize."

Hoole's Tasso. 6. 8.

"The last shall be first, and the first last." Matth. 20, 16.

"It will not be amiss to inquire into the cause of this strange phenomenon; that, even a man of discernment should write without meaning, and not be sensible that he hath no meaning; and that judicious people should read what hath been written in this way, and not discover the defect. Both are surprising, but the first much more than the last. Camp. Rhet. 2. 7.

Here both represents the two clauses of the sentence, preceded by that—both of those propositions are surprising. First and last stand in the place of the same clauses.

"Sublimity and vehemence are often confounded, the latter being considered as a species of the former.

Camp. Rhet. 1. 1.

la;

1

ų

Here latter and former are used for names which are near in construction, and no obscurity is occasioned by the substitutes. But these words when placed 'far from the words which they represent, obscure the sense, and compel the reader to peruse a sentence the second time, which is always a fault in style. For example ; "As to the Ætolian, it is frequently confounded with the Doric; and as this union takes place also in other essential points, it is only between the Dorians and Ionians that a kind of parrallel can be drawn. This I shall not undertake to perform; I shall only make one general observation; the manners of the former have ever been severe, and the characteristics of their architecture, language and poetry, are grandeur and simplicity. The latter more early made a progress in refinement." Anarch. ch. 72.

Digitized by Google

In every case, where the antecedent word or sentence is not obvious, so that the mind instantly applies the substitute to its principal, the use of a substitute is a fault. For example, "When a speaker addresseth himself to the understanding, he proposes the instruction of his hearers, and that by explaining some doctrine unknown or not distinctly comprehended by them, or by proving some position disbelieved or doubted by them. In other words, he proposes to dispel ignorance or to vanquish error. In the one, his aim is their information; in the other their conviction. Accordingly, the predominant quality of the former is perspicuity; of the latter, argument. By that, we are made to know; by this, to believe."

Camp. Rhet. 6. 1. ch. 1.

To what antecedent words or clauses, do all these substitutes refer? In the one—and the other what? Doubtless, the antecedents must be the two parts of the sentences, beginning with, by explaining and by proving. That is, in explaining an unknown doctrine, his aim is instruction—in proving a doubted point, his aim is conviction. The predominant quality of the former—former what? unquestionably the same sentences are the antecedents to the former and latter. These words cannot refer to information and conviction; for although perspiculty may be predicated of information, yet it cannot be a predominant quality of it; and argument cannot be predicated of conviction. But the whole passage is perplexed and obscure.*

"Leonis refused to go thither with less than the appointed equipment." Mickle, 1. 181. Here less supplies the place of equipment, and prevents the necessity of its repetition.

^{*} This criticism is the more necessary, as the use of former and latter in our best writers, is indulged to a fault. There are few places in which it is not better to repeat the antecedents than to use former and latter. The injudicious use of these and other substitutes is a great blemish in Campbell's Philosophy of Rhetoric.

A PHILOSOPHICAL AND

"To the relief of these, Noronha sent some supplies, but while he was preparing to send *more*, an order from Portugal arrived." *Mickle*, 1. 180.

Here more is sufficiently intelligible without a repetition of the name—supplies.

"And the children of Israel did so, and gathered some, more, some less." Exod. 16. 17.

"I cannot go beyond the word of the Lord, my God, to do less or more." Numb. 22. 18.

"Then began he to upbraid the cities wherein most of his mighty works were done." Matt. 11. 20.

"Was not this love indeed ? We men say more, swear more, but indeed Our shews are more than will." Shaks. Twelfth Night.

Such.

"Jabal was the father of such as dwell in tents." Gen. 4.

"Thou shalt provide able men such as fear God." Ex. 18.

"Objects of importance must be portrayed by objects of importance; such as have grace, by things graceful." Camp. Rhet. 1. 2.

Such here supplies the place of a name or noun, but it retains its attributive sense and the name may be added.

Self and own.

Self is said to have been originally an attribute; but is now used as an intensive word to give emphasis to substitutes and attributes.* Sometimes it is used as a noun.

^{*} Self has the force of the Latin ipse, and was in Saxon, added to all cases; he-self, his self, him-self. So in Latin tu, te, ipse, was used i the nominative.

In the plural, it forms selves. It is added to the attributes my, your, own; as myself, yourself,* ourselves; and to him, her, them, as himself, herself, themselves. And though annexed to substitutes in the objective case, these words are indifferently in the nominative or objective. Self is never added to his, their, mine or thine.

The compounds himself, herself, thyself, ourselves, themselves, may be placed immediately after the personal substitute, as he himself wrote a letter to the minister; or immediately after the following verb or its object; as "He wrote a letter himself,"—" he went himself to the admiralty." In such phrases himself not only gives emphasis to the affirmation; but gives to an implied negative, the force of one expressed. "He went himself to the minister," carries with it a direct negation that another person went. In negative sentences, it has a differsent effect. "He did not write the letter himself," implies strongly that he wrote it by an agent, or had an agency in procuring it to be written.

These compound substitutes are used after verbs when reciprocal action is expressed; as "They injure themselves."

Itself is added to names for emphasis; "this is the book *itself*."

Own is an attribute denoting property, used with names to render the sense emphatical; as "this book is my own."

Own is sometimes a substitute ; as "He came unto his own and his own received him not." John 1. 11.

5

[•] In this compound, we have a strong confirmation of what I have alleged respecting the arrangement of you in the singular number, when used of a single person. Self is invariably in the singularschees in the plural. Now if you is to be classed with plurals in all cases, we must, to be consistent, apply yourselves to a single person. Yet we make the proper distinction—yourself is applied to one person—yourselves to more. But upon the principle of our grammars, that you must always be joined to a verb in the plural, we are under the necessity of skying "You yourself were," when we address a single person—which is false construction. Whatever verb therefore is used with you when applied to an individual, must be considered as a verb in the singular number.

"This is an invention of his own."

One, other, another, none.

The atribute one is very often a substitute—other is used in the same manner, and often opposed to ons. "All rational or deductive evidence is derived from one or the other of these two sources." Camp. Rhet. ch. 5. To render these words more definite, and the specification of the alternative more explicit, the definitive the is placed before them—"as either he will hate the one and love the other."

Another has sometimes a possessive case; as "the horse is another's," but this form of speech is but little used.

Another is the Saxon an, one, and other—one other. It is an attribute; but often used as a substitute. "Let another praise thee and not thine own mouth."

Prov. 27. 2.

None [no one] is often a substitute ; as "Ye shall lie down and none shall make you afraid." Lev. 26. 6. It is used in the plural as well as the singular number.

The cardinal numbers are all used as substitutes, when the things to which they refer are understood by the train of discourse, and no ambiguity is created by the omission of the name; as "The rest of the people also cast lots, to bring one of ten to dwell in Jerusalem."

Neh. 11. 1.

One has sometimes the possessive form; "One's person is to be protected by law;" and frequently the plural number; as "I have commanded my sanctified ones, and I have called my mighty ones." Isa. 13. 9.

One, when contrasted with other, sometimes represents plural names, and is joined with a plural verb, as in this passage; "The reason why the one are ordinarily taken for real qualities, and the other, only for bare powers, seems to be." &c. Locke, b. 2. ch. 8. 25. One and another, have a peculiar distributive use in the following and the like expressions; "Brethren, let us love one another" The effect of these words seems to be, to separate an act affirmed of a number collectively, and distribute it among the several individuals—" Let us love —let each one love the other." "If ye have love one to another"—" by love serve one another." One anothcr in this phraseology, have the comprehensive sense of every one. "By love serve"—every one serve the other. Each is used in a like sense—They love each other —that is—they loved—each loved the other.

Several.

Several is an attribute, denoting originally one thing severed from others. But this sense seems to be now confined to technical law language; as a "joint and several estate." In common use, it is always plural, expressive of an indefinite number, not very large. It is frequently a substitute; as "Several of my unknown correspondents." Spectator, 281.

Some.

The attribute some is often used as a substitute; as "Some talk of subjects they do not understand; others praise virtue who do not practice it." Johnson.

Each, every, either, neither.

Each is a distributive attribute, used to denote every individual of a number, separately considered; as "The king of Israel and the king of Judah sat *each* on his throne." "Thou also and Aaron, take *each* of you his censer." "The four beasts had *each* of them six wings."

In these passages, *each* is a substitute for the name of the persons or objects, one separate from the other.*

^{*} Each is as applicable to a hundred or thousand as to two. "The prince had a body guard of a thousand men, each of whom was six feet high."

Every denotes all the individuals of a number considered separately; it is therefore a distributive attribute, but sometimes a substitute, chiefly in the law style; as "every of the clauses and conditions." It is generally followed by the name to which it belongs, or by the cardinal number one.

We sometimes see every separated from its name by the definitive the and an attribute of the superlative degree; as "every the least variation." Locke.

Either and neither are usually classed with the conjunctions; but in strictness, they are always attributes or substitutes. Their correlatives or and nor, though considered as conjunctions, belong to the latter class of words—or, being merely an abbreviation of other, and nor being the same word with the Saxon negative prefixed, as will be hereafter shown.

Either and or denote an alternative; as "I will take either road at your pleasure." That is, I will take one road or the other. In this use, either is an attribute.

Either is also a substitute for a name; as "Either of the roads is good." It also represents a sentence or a clause of a sentence; as "No man can serve two masters, for either, he will hate the one and love the other, or else," &c. Mat. 6. 2. To understand the true import of either, let or be also reduced back to its original orthography, "for either, he will hate the one and love the other; other else he will hold to the one and despise the other." Here we are presented with the sentence as it would have stood in the Saxon; and we see two distinct affirmations, to the first of which is prefixed either, and to the last other. These words then are substitutes for the following sentences, when they are intended to be alternative. Either and or are therefore signs of an alternative, and may be called alternatives.

Either is used also for each; as "Two thieves were crucified—on either side one." This use of the word is constantly condemned by critics, and as constantly repeated by good writers; but it was the true original sense of the word, as appears by every Saxon author. *Either* is used also to represent an alternative of attributes; as "the emotion must be *either*, not violent or not durable." *Camp. Rhet.* 1. 2.

Neither is not either, from the Saxon ne-either; and nor is ne-other, not other. As either and or present an alternative or a choice of two things; so neither and nor deny both or the whole of any number of particulars; as "Fight neither with small nor great." 1 Kings, 22, 31. Which sentence when resolved stands thus; "Fight not either with small, not other with great." Such is the curious machinery of language !

Neither is also used as an attribute and as a substitute for a name; as "Neither office is filled, but neither of the offices will suit the candidate."

NOTE.—Or, either, nor and neither are here explained in their true original character; but when they stand for sentences, it is more natural to consider them as connectives, under which head I have arranged them.

In general, any attribute [adjective] which describes persons or things with sufficient clearness, without the name to which it strictly belongs, may be used as a substitute; as "The rich have many friends"—"Associate with the wise and good—"The future will resemble the past—" Such is the opinion of the learned."

Attributes or Adjectives.

Attributes or Adjectives in grammar, are words which denote the qualities inherent in, or ascribed to things; as, a bright sun; a splendid equipage; a miserable hut; a magnificent house; an honest man; an amiable woman; liberal charity; false honor; a quiet conscience.

As qualities may exist in different degrees, which may be compared with each other, suitable modes of speech are devised to express these comparative degrees. In English, most attributes admit of *three* degrees of comparison, and a few admit of *four*. There are therefore *four* degrees of comparison.

5*

The first denotes a slight degree of the quality, and is expressed by the termination ish; as reddish, brownish, yellowish. This may be denominated the imperfect degree of the attribute.

The second denotes such a degree of the attribute as to constitute an absolute or distinct quality; as red, brown, great, small, brave, wise. This is called the positive degree.

The third denotes a greater or less degree of a quality, than exists in another object, with which it is compared; as greater, smaller, braver, wiser. This is called the comparative degree.

The fourth denotes the utmost or least degree of a quality; as, bravest, wisest, poorest, smallest. This is called the superlative degree.

The imperfect degree is formed by adding *ish* to an attribute; as *yellow*, *yellowish*. If the attribute ends in *e*, this vowel is omitted; as *white*, *whitish*.

The comparative degree is formed by adding r to adjectives ending with e; as wise, wiser—and by adding er to words ending with an articulation; as cold, colder—or by prefixing more or less; as more just, less noble.

The superlative degree is formed by adding st to attributes ending with e; as wise, wisest—and est to those which end with an articulation; as cold, coldest—or by prefixing most and least; as most brave, least charitable.

Every attribute susceptible of comparison, may be compared by more and most, less and least.

All monosyllables admit of er and est, and dissyllables when the addition may be easily pronounced; as happy, happier, happiest; lofty, loftier, loftiest. But few words of more syllables than one will admit of er and est. Hence most attributes of more syllables than one are compared by more and most, less and least; as more fallible, most upright, less generous, least splendid.

When attributes end in y after a consonant, this letter is dropped, and i substituted before er and est; as lofty, loftier, loftiest.

A few attributes have different words or irregular terminations for expressing the degrees of comparison; as

١

good, better, best; bad or evil, worse, worst; fore, former, first; little, less or lesser, least; much, more, most; near, nearer, nearest or next; old, older, oldest or eldest; late, later, latest or last.

When qualities are incapable of increase or diminution, the words which express them do not admit of comparison. Such are the numerals, *first*, *second*, *third*, *&c*. attributes of mathematical figures, as square, spherical, rectangular—for it will readily appear, that if a thing is *first* or *square*, it cannot be more or less so.

The sense of attributes however is not restricted to the modification, expressed by the common signs of comparison; but may be varied in an indefinite number of ways, by other words. Thus the attribute very, which is the French vrai, true, formerly written veray, is much used intensively to express a great degree of a quality, but not the greatest; as very wise or learned. In like manner are used much, far, extremely, exceedingly, and most of the modifiers in ly.

Some attributes, from particular appropriate uses, have received names, by which they are distinguished. But the usual classification is by no means correct. The following distribution seems to result from the uses of the words named.

An or a, the, this, that, these, those, other, another, one, none, some, may be called *definitives*, from their office, which is to limit or define the extent of the name to which they are prefixed, or to specify particulars.

My, thy, her, our, your, their; and mine, thine, his, when used as attributes, with names, are possessive attributes, as they denote possession or ownership. Its and whose, if ranked with attributes, belong to the same class.

Each and every are distributives, but they may be classed with the definitives.

Either is an *alternative*, as is or, which is now considered merely as a connective.

Own is an intensive adjective. The words to which self is affixed, himself, myself, themselves, yourself, yourselves, ourselves, thyself, itself, may be denominated intensive substitutes, or for brevity, intensives. Or they may be called compound substitutes.

Verb.

The verb is a *primary* part of speech, and next to the *name* or noun, is of the most importance. The uses of the verb are,

1st. To affirm, assert or declare; as, the sun shines; John loves study; God is just; and negatively, avarice is not commendable.

2d. To command, exhort or invite; as go, attend, let us observe.

3d. To pray, request, entreat; as, O may the spirit of grace dwell in us.

4th. To inquire, or question; as, does it rain? Will he come?

From the various uses and significations of verbs, have originated several divisions or classes. The only one in English which seems to be correct and sufficiently comprehensive, is, into *transitive* and *intransitive*. To these may be added a combination of the verb be, with certain auxiliaries and participles, which is called a *passive verb*.*

1. A transitive verb denotes action or energy, which is exerted upon some object, or in producing some effect. In natural construction, the word expressing the object, follows the verb, without the intervention of any other word, though the order may be sometimes varied. Thus "ridicule provokes anger," is a complete proposition—*ridicule* is the agent or nominative word, which causes the action—*provoke* is the verb, or affirmation of an act—anger is the object or effect produced, following the transitive verb *provoke*.

^{*} The common distribution into active, neuter and passive, is very objectionable. Many of our neuter verbs imply action in a preeminent degree, as to run, to walk, to Ay; and the young learner cannot easily conceive why such verbs are not called active.

"The wind propels a ship," is the affirmation of an act of the wind exerted on a ship. *Wind* is the agent, *propels* the verb, and *ship*, the object.

2. An *intransitive* verb denotes simple being or existence in a certain state; as, to be, to rest; or it denotes action, which is limited to the subject. Thus, "John sleeps," is an affirmation, in which John, the nominative to sleeps, is the subject of the affirmation; sleeps is a verb intransitive, affirming a particular thing of John, which extends to no other object.

3. The passive verb in English is formed by adding certain auxiliaries and participles to the verb be. It denotes passion or suffering; that is, that the subject of the affirmation or nominative is affected by the action affirmed; as "John is convinced." "Laura is loved and admired."

In this form of the verb, the agent and object change places. In the transitive form the agent precedes the verb, and the object follows; as "John has convinced Moses." In the passive form the order is changed, and the agent follows the verb preceded by a preposition; as "Moses is convinced by John."

To correspond with their nominatives, verbs are used in both numbers, and with the three persons in each.

As action and being may be mentioned as present, past and future, verbs have modifications to express time, which are called *tenses*. And as action and being may be represented in various ways, verbs have various modifications to answer these purposes, called *modes* or *moods*. Hence to verbs belong person, number, tense and mode.

The persons, which have been already explained, are I, thou or you, he, she, it, in the singular number; in the plural, we, ye or you, they. The numbers have been before explained.

Tenses.

There are six tenses or modifications of the verb to express time. Each of these is divided into two forms, for

A PHILOSOPHICAL AND

the purpose of distinguishing the *definite* or *precise* time from the *indefinite*. These may be thus explained and exemplified.—

Present Tense, indefinite.

This form of the present tense affirms or denies action or being, in present time, without limiting it with exactness to a given point. It expresses also facts which exist generally, at all times, general truths, attributes which are permanent, habits, customary actions, and the like, without reference to a specific time; as God is infinitely great and just; man is imperfect and dependent; plants spring from the earth; birds fy; fishes swim.

Present Tense, definite.

This form expresses the present time with precision; usually denoting action or being which corresponds in time with another action; as I am writing, while you are waiting.

Past Tense, indefinite.

This form of the past tense represents action which took place at a given time past, however distant and completely past; as "In six days, God created the heavens and the earth." "Alexander conquered the Persians." "Scipio was as virtuous as braye." "The Earl of Chatham was an eloquent statesman."

Past tense, definite [imperfect.]

This form represents an action as taking place and unfinished in some specified period of past time; as "I was standing at the door when the procession passed."

Perfect tense, indefinite.

This form of the perfect tense represents an action completely past, and often at no great distance, but the time not specified; as "I have accomplished my design." But if a particular time is named, the tense must be the past; as "I accomplished my design last week." "I have seen my friend last week," is not correct English. In this respect, the French idiom is different from the English, for "J' ai vu mon ami hier" is good French, but "I have seen my friend yesterday," is not good English. The words must be translated "I saw my friend yesterday." No fault is more common than a mistranslation of this tense.

It is to be noted however that this perfect indefinite tense, is that in which we express continued or repeated action; "My father has lived about eighty years." The king has reigned more than forty years." "He has been frequently heard to lament." Life of Cowper. We use it also when a specified past time is represented, if that time is expressed as a part of the present period. Thus, although we cannot say "We have been together yesterday," we usually say "We have been together this morning, or this evening." We even use this tense in mentioning events which happened at a greater distance of time, if we connect that time with the present; as "His brother has visited him once within two years." "He has not seen his sister, since the year 1800.

Perfect tense, definite.

This form represents an action as just finished; as I have been reading a history of the revolution in France."

Prior-past tense, indefinite [pluperfect.]

This form of the prior past tense expresses an action which was past at or before some other past time specified; as "he had received the news before the messenger arrived."

Digitized by Google

A PHILOSOPHICAL AND

Prior-past, definite.

This form denotes an action to be just past, at or before another time specified; as "I had been reading your letter when the messenger arrived."

Future tense, indefinite.

This form of the future tense gives notice of an event to happen hereafter; as, "Your son will obtain a commission in the navy." "We shall have a fine season."

Future tense, definite.

This form expresses an action which is to take place and be unfinished at a specified future time; as "He will be preparing for a visit, at the time you arrive."

Prior-Future, indefinite.

This form of the future tense denotes an action which will be past at a future time specified; as "They will have performed their task, by the appointed hour."

Prior-future, definite.

This form represents an action which will be just past at a future specified time; as "We shall have been making preparations, a week before our friends arrive."*

^{*}The common names and distribution of the tenses, are so utterly incorrect and incompetent to give a just idea of their uses, that I have ventured to offer a new division, retaining the old names, as far as truth will warrant. The tenses prior-past, and prior-future, are so perfectly descriptive of the tenses arranged under them, that I cannot but think they will be well received. The distinction of indefinite and definite is not wholly new; but I have never seen the definite forms displayed, though they are as necessary as the indefinite forms. Indeed, I see not how a foreigner can learn our language, as the tenses are commonly distributed and defined.

In the use of the present tense, the following things are to be noticed.

1. The present tense is customarily used to express future time, when by any mode of expression, the mind is transported forward to the time, so as to conceive it present; as "I cannot determine, till the mail arrives." "As soon as it is light, we shall depart." "When he has an opportunity, he will write." The words till, when, as soon as, carry the mind to the time of an event to happen, and we speak of it as present.

2. By an easy transition, the imagination passes from an author to his writings; these being in existence and present, though long after his decease, we substitute the writer's name for his works, and speak of him as living, or in the present tense; thus, Milton resembles Homer in sublimity and invention, as Pope resembles Virgil, in smoothness of versification. Plato is fanciful; Aristotle is profound.

3. It gives great life and effect to description, in prose or verse, to represent past events as present; to introduce them to the view of the reader or hearer, as having a present existence. Hence the frequent use of the present tense for the future, by the historian, the poet and the orator:

"She spoke; Minerva burns to meet the war; And now heaven's empress calls the blazing car; At her command rush forth the steeds divine, Rich with immortal gold, the trappings shine."

Iliad. 5.

The definite tenses, it will be observed, are formed by the participle of the present tense, and the substantive verb, be. This participle always expresses present time, even when annexed to a past or future tense; for *I* was writing, denotes that, at the past time mentioned, the action was present; *I* shall be writing, denotes future time, but an action then to be present.

6

The past tense of every regular verb ends in ed—d being added to a verb ending in e; and ed to a verb with other terminations; as hate, hated; look, looked.

The future tense is formed by the present tense of *shall* and *will;* for, I shall go, he will go, are merely an appropriate use of *I shall to go, I will to go.* See an explanation of these words under the head of auxiliaries.

There are other modes of expressing future time; as "I am going to write"—"I am about to write." These have been called the *inceptive* future, as they note the commencement of an action, or an intention to commence an action without delay.

We have another mode of expression, which does not strictly and positively foretel an action, yet it implies a necessity of performing an act, and clearly indicates that it will take place. For example, "I have to pay a sum of money to morrow." That is, I am under a present necessity or obligation to do a future act.

The substantive verb followed by a radical verb, forme another idiomatic expression of future time; as "John is to command a regiment." "Eneas went in search of the seat of an empire which was, one day, to command the world." The latter expression is a future past—that is, past as to the narrator; but future as to the event, at the time specified.

Modes.

Mode, or Mood, in grammar, is the manner of representing action and being, or the wishes and determinations of the mind. This is performed by inflections of the verb, or by combinations of verbs with auxiliaries and participles, and by their various positions.

As there are scarcely two authors who are agreed in the number and denominations of the modes in English, I shall offer a distribution of the verbs, and a display of their inflections and combinations, somewhat different from any which I have seen.

1. The first and most simple form of the verb, is, the verb without inflections, and unconnected with persons. This form usually has the prefix to; as to love.

4

This form of the verb, not being restricted to person or number, is usually called the *Infinitive Mode*.

2. Another use of the verb is to affirm, assert or declare some action or existence, either positively, as he runs, or negatively, as you are not in health. This form is called the *Indicative* Mode.

3. Another office of the verb is to command, direct, ask, or exhort; as arise, make haste, let us be content. This is called the Imperative Mode.

4. Another form of the verb is used to declare the power, liberty, possibility or necessity of acting or being, by means of certain words called auxiliaries, as may, can, must, &c. This form is called the *Potential* Mode; as *I* may or can write; he must wait.*

5. Another use of verbs is to represent actions or events which are uncertain, conditional or contingent; as if he shall go; if they would attend. This is called the Subjunctive Mode; but would better be denominated the Conditional. The Indicative and Potential become conditional, by means of words used to express condition; 25 if, though, unless, whether.

The Modes then are five.—The Infinitive, the Indicative, the Imperative, the Potential, and the Subjunctive.

It may also be observed that the combinations, and arrangements of our verbs and auxiliaries to express negative and interrogative propositions, are really modes of the verb, and a place might be assigned to the verb for each purpose, were it not for the inconvenience of having modes of modes. For the sake of distinction, I denominate these verbs interrogative and negative, and have exhibited the conjugation of each.

^{*} This mode is inserted in compliance with the opinion of many Grammarians; but in opposition to my own. It is in fact the indicative mode, affirming the *power*, &c. of acting, instead of the act itself.

Participles.

Participles are derivatives from verbs, formed by particular terminations, and having the sense of verbs, attributes or names.

There are two species of participles—one denoting present time, and formed by adding ing to the verb: as *turn, turning*; or when the verb ends with e, by dropping that letter and adding ing; as place, placing. But e is retained in dyeing from dye, to color, to distinguish it from dying, the partciple of die; in which word, y is used to prevent the duplication of i. In singeing from singe, e is retained to soften g, and to distinguish the word from singing; so also in twingeing.

This participle of the present tense, is used, as before observed, to form the definite tenses. But it often loses the sense of the verb, and becomes an attribute; as a *loving* friend, *lasting* friendship. In this use, it admits of comparison by more and less, most and least; as more *lasting*, *less saving*, *most promising*.

This participle also becomes an adverb or modifier by receiving the termination ly; as lovingly laughingly: and this species of modifiers admits of comparison, as more lovingly, most charmingly.

This participle also becomes a name and admits of the definitive; as "The burning of London in 1666." In this capacity, it takes the plural form, as "the overflowings of the Nile"—"He seeth all his goings." And sometimes the plural is used when a modifier is attached to the participle; as "the goings out the comings in." *Ezek.* 43. 11. But this use of the participle is not esteemed elegant, nor is it common.

In a few instances, the participle in ing becomes a name by receiving the termination ness; as willingness from willing.

The other species of participle is formed from the verb, by adding d or ed, and in regular verbs, it corresponds exactly with the past time; as loved, preceded. • This may be called the participle of the perfect tense. This participle when its verb is *transitive*, may be joined with the verb *be*, in all its inflections, to form a passive verb, and the participle, in such combination, is called *passive*. But

This participle, when formed from an *intransitive* verb, cannot, except in a few instances, be joined to the substantive'verb, or used in a passive sense : but it unites with the other auxiliaries.

This participle often loses its verbal character, and becomes an attribute; as a concealed plot, a painted house. In this character, it admits of comparison; as "a more admired artist," "a most respected magistrate;" and a few of these verbal attributes receive the termination ly, and become modifiers; as pointedly, more conceitedly, most dejectedly.

Those verbs, whose past tense and participle end in ed, are deemed regular. All which deviate from this rule, are deemed irregular, and their participles of the perfect tense end mostly in t, n and g. A list of them will be found in the sequel.

Auxiliaries.

In English, a few monosyllabic verbs are chiefly employed to form the modes and tenses of other verbs, and from this use, are denominated *auxiliaries* or *helping verbs*. These are followed by other verbs, without the prefix to; as he may go;" though they were originally principal verbs, and some of them still retain that character, as well as that of auxiliaries.

The verbs which are always auxiliary to others, are may, can, shall, must; those which are sometimes auxiliaries, and sometimes principal verbs, are, will, have, do and be. To these may be added need and dare.

May conveys the idea of *liberty* or permission; as "he may go, if he will." Or it denotes *possibility*; as "he may have written or not."*

* The primitive idea expressed by may was power; Sax. magan to be able. Can, has the sense of to be able.

Shall, in its primitive sense, denotes to be obliged, coinciding nearly with ought; which sense it retains in the German. But this signification, though evidently the root of the present uses of this word, is much obscured. The following remarks will illustrate the several uses of will and shall.

Will has a common origin with the Latin volo. Hence the German wollon, the old English woll, and the present contraction won't that is, woll-not.*

This was originally a principal verb, and is still used as such in our language. It denotes the act of the mind in determining, or a determination; for he wills to go, and he will go, are radically of the same import.

When a man expresses his own determination of mind, *I will*, we are accustomed to consider the event, or act willed as certain; for we naturally connect the power to act, with the intention; hence we make the declaration of will a ground of confidence, and by an easy association of ideas, we connect the declaration, with an obligation to carry the determination into effect. Hence will expressed by a person himself, came to denote a promise.

But when a person declares the will of another, he is not supposed to possess the power to decide for him, and to carry his will into effect. He merely offers an opinion, grounded on information or probable circumstances, which give him more or less confidence of an event depending on another's will. Hence will in the second and third person simply *foretells*, or expresses an opinion of what will take place.

Shall, in some of its inflections, retains its primitive sense—to be obliged or bound in duty; but in many of its uses, its sense is much varied. In the first person, it merely foretells; as "I shall go to New-York to-morrow." In this phrase, the word seems to have no reference to obligation; nor is it considered by a second

^{*} It is supposed that the Roman v was pronounced as our w welv.

person as imposing an obligation on the person uttering But when shall is used in the second and third perit. sons, it resumes its primitive sense, or one nearly allied to it, implying obligation; as when a superior commands with authority, you shall go; or implying a right in the second and third person to expect, and hence denoting a promise in the speaker ; as "you shall receive your wages." This is radically saying "you ought to receive your wages ;" but this right in the second person to receive, implies an obligation in the person speaking to pay. Hence shall in the first person foretells; in the second, promises, commands, or expresses determination. When shall in the second and third persons, is uttered with emphasis, it expresses *determination* in the speaker, and implies an authority to enforce the act. "You shall go."

Must expresses necessity, and has no variation for person, number or tense.

Do is a principal and a transitive verb, signifying to act or make; but is used in the present and past tenses as an • auxiliary to give emphasis to a declaration, to denote contrast, or to supply the place of the principal verb.

"It would have been impossible for Cicero to inflame the minds of the people to so high a pitch against oppression, considered in the abstract, as he actually did inflame them against Verres the oppressor." Camp. Rhet. 1. 10. Here did expresses emphasis.

"It was hardly possible that he should not distinguish you as he has done." Cowp. Let. 40. Here done stands in the place of distinguished you. For it must be observed that when do is the substitute for another verb, it supplies the place not only of the verb, but of the object of the verb.

That is, as thou lovest plays.

Do is also used in negative and interrogative sentences; the present and past tenses of the Indicative Mode being chiefly formed by this auxiliary as "I do not reside in Boston." Does John hold a commission?

Have is also a principal and transitive verb, denoting to possess; but much used as an auxiliary, as "He has lately been to Hamburg." It is often used to supply the place of a principal verb, or participle, preventing a repetition of it, and the object after it; as "I have not seen Paris, but my brother has"—that is, has seen Paris.

Equally common and extensive is the use of be, denoting existence, and hence called the substantive verb. Either in the character of a principal verb, or an auxiliary, it is found in almost every sentence of the language.

The inflection of a verb, in all the modes, tenses, numbers and persons, is termed *Conjugation*. The English verbs have few inflexions, or changes of termination; most of the tenses and modes being formed by means of the auxiliaries.

NOTE. In the following conjugations, a small n in an Italic character, is inserted in the place where *not* should stand in negative sentences. The same place is generally occupied by *never*, but not in every case. It is believed this letter will be very useful, especially to foreigners. The learner may conjugate the verb with or without *not*, at pleasure.

Conjugation of the Auxiliaries.

MAY.

Present Tense.

Si	ngular.	Plural.
1st. Person,		We may n
2d. Person,	Thou mayest n You may n^*	Ye may n You may n

• It may be remarked once for all, that thou and ye are the second person used in the sacred style; and sometimes in other grave discourses. In all other cases, you is the second person of the singular number, as well as of the plural. It is not one of the most trivial absurdities which the student must now encounter at every step, in the study of English grammar, that he meets with you in the plural number only, though he finds it the representative of an individual.

Singular.

Plural.

3d. Person,

 $\begin{cases} mas. He may n \\ fem. She may n \\ neut. It may n \end{cases}$

They may n

Past Tense.

I might n		We might n
\int Thou mightest n	_	∫Ye might n
You might n	•	You might n
He might n		They might n

CAN.

,

Pesent Tense.

I can n	We can n
Thou canst n	§Ye can n
You canst n	You can n
He can <i>n</i>	They can n

Past Tense.

I could <i>n</i>	We could n
6 Thou couldst n	Ye could n
You could n	You could n
He could n	They could n

SHALL.

Present Tense.

A shall, n Thou shalt n You shall n He shall n

•

We shall n Ye shall n You shall n They shall n.

Past Tense.

I should <i>n</i>	We should n
§ Thou shouldst n	Ye should n
You should n	🄰 You should n
He should n	`They should a

WILL.

Present Tense.

I will n Thou wilt n You will n He will n

We will n Ye will n You will n They will n

Past Tense.

I would n Thou wouldst n You would n He would n

We would n Ye would n You would n They would n

NOTE. Will, when a principal verb, is regularly conjugated; I will, thou willest, he wills. Past tense, I willed.

MUST.

Must has no change of termination, and is joined with verbs only in the following tenses.

Present Tense.

I must n love

Thou must n love

You must n love

- He must n love
- We must n love

Ye must n love You must n love

iooole

They must n love

70

Perfect Tense.

I must n have loved Thou must n have loved You must n have loved He must n have loved We must n have loved Ye must n have loved You must n have loved They must n have loved

DO.

Indicative Mode,

Present Tense.

I do n love	We do n love
(Thou dost n love	§Ye do n love
You do n love	🛿 You do n love
He does or doth n love	They do n love

Past Tense.

I did n love	We did n love
§ Thou didst n love	§Ye did n love
You did n love	You did n love
He did n love	`They did n love

Infinitive Mood.

Participles.

To do

Doing, done, having done

NorE.—In the third person singular of the present tense, doth is need in sacred and solemn language; does in common and familiar language. This verb, when principal and transitive, has all the tenses and modes, I have done, I had done, I will do, &c.

HAVE.

Infinitive Mode, Present Tense. To have.

Perfect Tense. To have had. Participle of the Present Tense. Having.

> Of the Perfect Tense. Had.

> > Compound. Having had.

Indicative Mode.

Present Tense.

I have n Thou hast n You have n He has or hath n* We have n Ye have n You have n They have n

Past Tense.

I had n Thou hadst n You had n He had n We had n Ye had n You had n They had n

NOTE.-In the foregoing tenses, this verb is used either as a principal verb or an auxiliary.

Perfect Tense.

I have n had Thou hast n had You have n had He has or hath n had We have n had You have n had They have n had They have n had You have n had You have n had You have n had You have n had

Digitized by Google

*Hath is used in the solemn style; has in the familtar.

Prior-part Tense.

I had n had	We had n had
🕻 Thou hadst 🕫 had	🖇 Ye had n had
You hadst n had You had n had	You had n had
He had n had	`They had n had

NOTE.—In these tenses, the perfect and prior-past, this verb is always principal and transitive.

Future Tense.

In this tense the verb is principal or auxiliary, with the same form of conjugation.

The following form foretells:

I shall <i>n</i> have	We shall n have
Thou wilt n have	§ Ye will <i>n</i> have
You will <i>n</i> have	You will n have
He will <i>n</i> have	They will n have

ł,

The following form promises, commands or determines.

I will <i>n</i> have	We will n have
SThou shalt n have	🖌 Ye shall n have 🦂
You shall n have	🌔 You shall n have
He shall n have	They shall n have

Prior-Future.

This tense foretells, and is used only when the verb is principal.

I shall <i>n</i> have had	We shall <i>n</i> have had
Thou shalt or wilt <i>n</i> have had You shall or will <i>n</i> have had	Ye shall or will n have
had	had
You shall or will a have	You shall or will n have
had	L had
He shall or will a have	They shall or will n have
had	had
. 7	

Norm.--Will in not used in the first person of this tense; it being incompatible with the nature of a promise. We cannot say 'I will have had possession a year, on the first of October next;' but I shall have had, is a common expression.

Imperative Mode.

Plural.
Have ye n, have you n
Don you have
Let us n have
Let them n have

Notz.—A command, request or exhortation, must, in the nature of things, be addressed to the second person; nor can these phrases, let me have, let us have, be considered, in strictness, as the first person of this mode; nor let him have, as the third; but they answer to the first and third persons of this mode in other languages, and the mere naming of them is wholly immaterial.

The true force and effect of the verb, in this mode, depend on its application to characters, and the manner of utterance. Come, go, let him go, if uttered with a respectful address, or in a civil manner, may express entreaty, request or exhortation. On the other hand, such words uttered with a tone of authority, and addressed to inferior, express command.

Potential Mode.

Present Tense.

In the following tense, this verb is either auxiliary or principal.

I may or can n have	We may or can n have
S Thou mayest or canst n have	Ye may or can n have
	You may or can n have
He may or can <i>n</i> have	They may or can n have

Must is used in the foregoing tense, and in the perfect also.

Past Tense.

In this tense, the verb is principal or auxiliary.

I might n have I should n have I could # have 1 would n have

Thou mightest n have Thou shouldst n have Thou couldst n have Thou wouldst n have

You might n have . You should **n** have You could a have You would n have

ţ,

He might a have He should n have He could n have He would n have

We might n have We should n have We could n have We would n have

Ye might n have Ye should n have Ye could n have Ye would n have

You might n have You should n have You could a have You would n have

They might n have They should n have They could n have They would n have

Perfect Tense.

In this tense, have is a principal verb only.

I may n have had S Thou mayest n have had SYe may n have had You may *n* have had He may n bave had

We may n have had You may n have had They may n have had

Prior-past Tense-the principal verb only.

I might <i>n</i> have had	We	•
Thou mightest n have had	Ye j	might a have had
You might n have had He might n have had	You They	-
0		•

In the same manner with should, could and would.

There is no future tense, distinct from that of the indicative Mode.

Conditional or Subjunctive Mode.

The Conditional or Subjunctive Mode is the same as the Indicative; with some preceding word expressing condition, supposition or contingency. These words are if, though or although, unless, except, whether, lest, albeit.

If is a corruption of gif, the imperative of gifas, the Saxon orthography of give. Though, the Saxon theak, signifies permit, allow. Although is a compound of all and though, give or allow all. The old word thof, still used in some parts of England, is the imperative of the Saxon thaftan, to allow. Unless is the imperative of the Saxon onlysan, to loose, or dissolve. Except is the imperative of that verb. Lest is from lesan, to lease or dissolve. Albeit, is a compound of all, be and it, let it be so.

These words, if, though, answer in signification and use, to the following: admit, grant, allow, suppose, as signs of a condition or hypothesis; "if you shall go," is simply, "give, you shall go;" that is, give that condition or fact; allow or suppose it to be so.

It has been, and is still customary for authors to omit the personal terminations of the second and third persons of the verb in the present tense, to form the subjunctive mode; if thou go, if he write.

The correct construction of the subjunctive Mode is precisely the same as that of the indicative; as it is used in popular practice, which has preserved the true idiom of the language; if thou hast, if he has or hath; to denote present uncertainty. But a future contingency, may be expressed by the omission of the personal terminations; if he go, that is, if he shall go.

Be.

Be is a verb denoting existence, and therefore called the *substantive* verb. It is very irregular, being derived

from different radicals, and having undergone many dialectical changes.

Infinitive Mode, Present Tense.

To be.

Perfect Tense.

To have been.

Participle of the Present Tense.

Being.

Of the Perfect.

Been.

Compound.

Having been.

Indicative Mode.

Present Tense.

I am n Thou art n You are n He is n She is n It is n We are n S Ye are n S You are n

They are n

The foregoing form of the present tense is now generally used by good writers. But the following form is the most ancient, and is still very general in popular practice.

I be n	We be n
You be n	Ye or you be n
He is n	They be n.

Thou beest, in the second person, is not in use.

Past Tense.

I was n	We were s
(Thou wast n	S Ye were n
You was or were a	You were a
He was n	They were n

Perfect Tense.

I have a been	We have been
CThou hast n been	γYe have been
You have n been	🛿 You have n been
" He hath or has n been	They have n been

Prior-past Tense.

I had n been	We had <i>n</i> been
S Thou hadst n been S You had n been	§Ye had n been
You had n been	🖌 You had n been
He had <i>n</i> been	They had n been

Future Tense.

I shall or will n be	We shall or will n be
Thou shalt or wilt n be	Ye shall or will n be
You shall or will n be	You shall or will n be
He shall or will n be	They shall or will n be
He shall or will n be	They shall or will n b

Prior-future Tense.

	We shall <i>n</i> have been
Thou shalt or wilt n have been	Ye shall or will n have been
k been k	You shall or will n have
been You shall or will n have	been
been	They shall or will <i>n</i> have
He shall or will <i>n</i> have been	been

Imperative Mode.

Command

(Ben; be thoun; donthou be, or don be; be ye n; do n you be, or do you m be; or do n be.

Exhortation (Let them n be, let him n be, let us n be. let them n be. Entreaty

Potential Mode.

l may or can n be	We may or can n be
Thou mayst or canst n be	SYe may or can a be
You may or can n be	You may or can s be
He may or can <i>n</i> be	They may or can n be

Must is used in this tense, and in the perfect also.

Past Tense.

I might n be	We might n be
S Thou mightest n be	SYe might n be
You might a be	You might n be
He might n be	They might n be

In the same manner with could, should and would.

Perfect Tense.

I may or can n have been We may or can n have been Thou mayest or canst n (Ye may or can n have been You may or can n have been

He may or can n have been

You may or can n have been

They may or can n have been

Prior-past Tense.

I might n have been Thou mightest n have been You might n have been He might n have been They might n have been They might n have been

In the same manner with could, would and should. There is no future tense in this mode.

Subjunctive Mode.

This Mode is formed by prefixing any sign of condition hypothesis or contingency, to the indicative mode in its various tenses.

Present Tense.

If I am Thou art You are He is We are Ye are You are They are

Past Tense.

If I was	We were
If I was S Thou wast	🕻 Ye were
You was or were	You were
He was	`They were

The foregoing tenses express uncertainty, whether a fact exists or existed; or they admit the fact. The following form is used for the like purposes:

If I be	We be
Thou be	🕻 Ye be
You be	You be
`He be	`They be.

But this is more properly the form of the conditional future; that is, the verb without the sign of the future if he be, for if he shall be.

•

The following is the form of expressing supposition or hypothesis, and may be called the

Hypothetical Tense.

If I were	We were
Thou wert	🕻 Ye were
You was or were). You were
He were	`They were

"If I were," supposes I am not; "if I were not," supposes I am.*

* No fault is more common than the misapplication of this tense. In the Saxon, were was often used in the third person of the indicative mode, and without a preceding sign of condition; as in these examples-" After thisum hafde se cyng mycel getheat, and swithe deope space with his witan ymbe this land, hu hit wære gesett. Sax. Chron. An. 1085. After this the King held a great council, and made important representations respecting this land, how it were settled." In the German, the inflection of the word, in the imperfect tense of the indicative is-Ich war, du warest, er war he were. The orthography of the word, in the imperfect tense of the subjunctive, is were, and our early English writers seem to have confounded the two tenses. The regular Saxon verb in the past tense of the indicative was, thus inflected-Ic was, du ware, he was. Hence our greatest writers, Milton, Dryden, Pope and others, retained that form of the word-Before the heavens thou wert; remember what thou wert-expressions which Lowth condemns as not analagous to the formation of verbs in different modes. I would condemn this use of the verb also, but for a different reason; it is new obsolete.

But the use of this form of the verb is retained in the subjunctive mode, which, our grammars teach us, must follow the signs of condition—*if*, though, unless, whether—a rule which, without qualification, has a mischievous effect. On carefully examining the original state of the language, I find the common and true use of were in the singular number, is, to express hypothesis or supposition. Thus, Sax. Chron. ad annum 1017. On the third of the ides of December, at night, the moon appeared—" swylce he eall blodig were"—such, or, as *if*, he all bloody were—and the heaven was red, "swylce hit bryne wære"—es if it were on fire. This use of were, in the singular number, is legitimate and is still retained by good writers—but its use to express a mere uncertainty respecting a past event, after a sign of condition, is obsolete or not legitimate. The following examples will illustrate the distinction—" Whether the killing were malicious or not, is no farther a subject of inquiry,"

The other tenses are the same as in the indicative mode.

The Conjugation of a Regular Verb.

LOVE.

Infinitive Mode, Present Tense. To love.

> Perfect Tense. To have loved.

Participle of the Present Tense. Loving.

> Of the Perfect. Loved.

Compound. Having loved.

Indicative Mode.

Present Tense, indefinite.

I love n Thou lovest n You love n He loveth or loves n We love n Ye love n You love n They love n

Sc. Judge Parker, trial of Selfridge, p. 161. Here were is improperly used—So also where the fact is admitted; "Though he were a son, yet learned he obedience." *Heb.* v. 8, where Lowth justly condemns the use of were—"Unless a felony were attempted or intended." *Selfridge Trial*, p. 125. It ought to be was.

The following is the true sense of were in the singular number— "Were it necessary for you to take those books with you?" Judge. Parker, Ibm. 159. "If it were possible, they would deceive the elect." Mat. 24, 24. This is the only legitimate use of this tense. "It were easy." Miller's Letters, p. 221.—It would be easy.

82

With the auxiliary do.

I do n lov e	We do # love
S Thou dost n love	§Ye do n love
You do n love	You do n love
He doth or does n love	They do n love

Definite.

ing
(Ye might n have been lov-
j ing
You might n have been lov-
(ing
They might a have been
ing.

With could, would and should in the same manner, in the two last forms.

The Potential mode becomes conditional by means of the modifiers, if, though, unless, &c. prefixed to its tenses, without any variation from the foregoing inflections. This may for distiction, be called the *Conditional Potential*.

Subjunctive Mode.

Present Tense.

If, though, unless, whether, suppose, admit, &c.

l love n	We love n
§ Thou lovest n	🕻 Ye love n
You love n	You love n
He loveth or	`They love n.
loves n	•

Some authors omit the personal terminations in the socond and third persons—*if thou love, if he love.* With this single variation, which I deem contrary to the principles of our language, the subjunctive mode differs not in the least from the indicative, and to form it the learner has only to prefix a sign of condition, as *if, though, usless,* &c. to the indicative, in its several tenses : With this ex-

ception, however, that in the future tense, the auxiliary may be and often is suppressed. Thus instead of

If I shall or will love Thou shalt or wilt love You shall or will love He shall or will love We shall or will love Ye shall or will love You shall or will love They shall or will love

Authors write,

If, &c. I love Thou love You love He love

We love Ye love You love They love

It is further to be remarked, that should is very often used to form the conditional future—if I should, thou shouldst, &c. This tense is inflected like the past tense of the potential, but is probably more used for the conditional future than shall and will.

The other auxiliaries also in the past time are used in this conditional mode in a very indefinite sense.

I shall therefore offer a new tense in this mode composed of any principal verb, with might, could, should and, would, expressing, like the Greek acrists, time indefinite present, past or future, especially the future.

Subjunctive Mode, indefinite Tense.

If, though, unless, whether, lest, except, suppose, &c.

Singular.

I might, could, should, or would n love Thou mightest, couldst, shouldst or wouldst n love You might, could, should, would n love He might, could, should, would n love

89

Phiral.

We might, could, should, would n love Ye or you might, could, should, would n love They might, could, should, would n love

In the subjunctive mode, there is a peculiarity in the tenses which should be noticed. When I say, if it rains, it is understood that I am uncertain of the fact, at the time of speaking. But when I say, "If it rained, we should be obliged to seek shelter," it is not understood that I am uncertain of the fact; on the contrary, it is understood that I am certain, it does not rain at the time of speaking. Or if I say, "if it did not rain, I would take a walk," I convey the idea that it does rain at the moment of speaking. This form of our tenses in the subjunctive mode has never been the subject of much notice, nor ever received its due explanation and arrangement. For this hypothetical verb is actually a present tense, or at least indefinite. ther to be remarked, that a negative sentence always implies an affirmative---- " if it did not rain," implies that it On the contrary, an affirmative sentence imdoes rain. plies a negative ---- " if it did rain, implies that it does not.

In the past time, a similar distinction exists; for "if it rained yesterday," denotes uncertainty in the speaker's mind—but "if it had not rained yesterday," implies a certainty, that it did rain.

Passive form of the Verb.

Indicative Mode.

Present Tense.

I am n loved Thou art n loved You are n loved He is n loved We are n loved Ye are n loved You are n loved They are n loved

Potential Mode.

Present Tense.

I may, can or must n be loved Thou mayest, canst or must n be loved You may, can or must n be loved He may, can or must n be loved They may can or must n be loved He may, can or must n be hoved He may, can or must n be loved He may, can or must n be hoved He may, can or must n be hoved

Past Tense.

I might a be loved	We might n be loved
(Thou mightest n be loved	Ye might a be loved
You might n be loved	You might a be loved
He might a be loved	`They might n be loved'

With could, should and would in the same manner.

Perfect Tense.

I may, can or must n have	We may, can or must *
been loved	have been loved
Thou mayest, canst or must n have been loved You may, can or must n have been loved He may, can or must n have been loved	

"The not is usually placed after do, and contracted into don't.

Prior-past Tense.

I might n Thou mightest n You might n He might n He might n

In the same manner with could, would and should.

Subjunctive Mode.

Present Tense.

If &c. I am a loved	We are n loved
§ Thou art n loved	SYe are n loved
You are <i>n</i> loved He is <i>n</i> loved	You are n loved They are n loved
110 10 10 101 00	They use a love

Or thus:

If, &c. I be n loved Thou be n loved You be n loved He be n loved We be n loved { Ye be n loved ? You be n loved They be n loved

Past Tense.

If, &c. I was n loved	We were n loved
(Thou wast n loved	(Ye were n loved
You was or were n	ζ
loved	You were n loved
He was n loved	They were n loved

Or thus:

If, &o. I were n loved Thou wert n loved You were n loved He were n loved We were n loved Ye were n loved You were n loved They were n loved

Perfect Tense.

If, 4c. I have n been loved We have n been loved Thou hast n been loved S Ye have n been loved You have n been loved You have n been loved He has or hath n been They have n been loved

loved

Prior-past Tense.

If, &c. I had n been loved Thou hadst n been loved You had n been loved You had n been loved You had n been loved

You had n been loved He had n been loved They had n been loved

Future Tense.

If, &c. I shall, will or should n be loved Thou shalt, wilt or shouldst n be loved You shall, will or should n be loved He shall, will or should n be loved Ye shall, will or should n be loved Yop shall, will or should n be loved N be loved

Prior-future Tense.

If, 4c. I shall or should n have been loved Thou shalt or shouldst n have been loved You shall or should n have been loved He shall or should n have been loved

The future is often elliptical, the auxiliary being omitted. Thus instead of *if I shall be loved*, &c. are used the following forms.

If, &c. I be n loved	We be n loved
S Thou be n loved	SYe be n loved
You be n loved	You be n loved
He be n loved	They be n loved

1

ŀ e An exhibition of the verb in the interrogative form, with the sign of the negative.

Indicative Mode.

Present Tense, indefinite.

Love I ñ?	Love we n?
S Lovest thou <i>n</i> ?	$\int Love ye n?$
Love you n?	¿Love you n?
Loveth or loves he n?	Love they n?

The foregoing form is but little used. The following s the usual mode of asking questions.

Do Inlove?	Do we n love?
S Dost thou n love?	S Do ye n love?
Do you n love?	Do you n love?
Does or doth he n love?	Do they n love?

Definite.

Am I n loving?	Are we n loving?
SArt thou n loving?	\int Are ye <i>n</i> loving?
Are you <i>n</i> loving?	Are you <i>n</i> loving?
Is he n loving?	Are they n loving?

Past Tense, indefinite.

Did I n love?	Did we n love?
§ Didst thou n love?	S Did ye <i>n</i> love?
Did you n love?	Did you n love?
Did he n love?	Did they <i>n</i> love?

The other form of this tense, loved he? is seldom used.

Definite.

Was I n loving?	Were we n loving?
Wast thou n loving?	(Were ye a loving!
Was or were you a	{ -
loving?	(Were you a loving?
Was he <i>n</i> loving?	Were they a loving?

Perfect Tense, indefinite.

Have I n loved?	Have we n loved?
Hast thou <i>n</i> loved?	Have ye a loved?
	Have you n loved?
Has or hath he n loved?	Have they n loved?

Definite.

Have T n been loving? Have we n been loving?
Hast thou n been loving? Have ye n been loving?
Have you n been loving? Have you n been loving?
Has or hath he n been Have they n been loving?
loving?

Prior-past, indefinite.

Had I n loved?	Had we <i>n</i> loved?
Hadst thou n loved?	Had ye n loved?
Had you n loved?	Had you <i>n</i> loved?
Had you n loved? Had he n loved?	Had they n loved?

Definite.

Had I n been loving? Had we n been loving? Hadst thou n been lov- Had ye n been loving? ing?

Had you n been loving? Had you n been loving? Had he n been loving? Had they n been loving?

Future Tense, indefinite.

Shall I n love?	Shall we n love?
Shalt or wilt thou n love?	§ Shall or will ye n love?
Shall or will you n love? Shall or will he n love?	Shall or will you <i>n</i> love?
Shall or will he n love?	Shall or will they n love?

Definite.

	Shall I n be loving? 📉	Shall we n be loving?
4	Shalt or wilt thou n be lov-	(Shall or will ye n be lov-
	ing? Shall or will you n be lov-) ing?
1	Shall or will you n be lov-	Shall or will you n be lov-
	ing?	(ing?
	Shall or will he n be lov-	Shall or will they n be lov-
	ing?	ing?
	÷ , ,	

Prior-future, indefinite.

Shall I n have loved?	Shall we <i>n</i> have loved?
(Shalt or wilt thou n have	Shall or will ye n have lov-
loved?	ed?
Shall or will you n have	Shall or will you <i>n</i> have
loved? Shall or will you n have loved?	loved?
Shall or will he <i>n</i> have	Shall or will they n have
loved?	loved?

The definite form of this tense, is little used.

Will, in this tense, is not elegantly used in the first person.

The interrogative form is not used in the imperative mode—a command and a question being incompatible.

It is not necessary to exhibit this form of the verb in the potential mode. Let the learner be only instructed that in interrogative sentences, the nominative follows the verb when alone, or the first auxiliary when one or more are used; and the sign of negation *not*, (and generally *never*,) immediately follows the nominative.

97

Irregular Verbs.

All verbs whose past tense and perfect participle do not end in *ed* are deemed irregular. The number of these is about one hundred and seventy-seven. They are of three kinds.

1st. Those whose past tense, and participle of the the perfect are the same as the present; as beat, burst, cast, cost, cut, hit, hurt, let, put, read, rent, rid, set, shed, shred, shut, slit, split, spread, thrust, sweat, wet. Wet has sometimes wetted; heat sometimes het; but the practice is not respectable. Light and quit have lit and quit in the past time and participle, but they are also regular.

2. Verbs whose past time and participle are alike, but different from the present; as meet, met; sell, sold.

3. Verbs whose present and past tenses and participle are all different; as know, knew, known.

A few verbs ending with ch, ck, x, p, ll, ess, though regular, suffer a contraction of ed into t, as snatcht for snatched, chect for checked, snapt for snapped, mixt for mixed; dwelt for dwelled, past for passed. Others have a digraph shortened; as dream, dreamt; feel, felt; mean, meant; sleep, slept; deal, dealt. In a few, v is changed into f, as hereave, hereft, leave, left.

As some of the past tenses and participles are obsolete or obsolescent, it is deemed proper to set these in separate columns for the information of the student.

IRREGULAR VFRBS.

Infin.	Past Tense.	Participle. Past Tense obsolete.	Participle obsolete.
Abide	abode	abode	
Am	was	been	
Arise, rise Awake	aro se, ro se awoke, awake	arisen, risen ed awaked

PRACTICAL GRAMMAR.

Infin. Past Tense. Participle. Wear wore worn, wore Weave wove woven, wove Weep wept wept Win won won Wind wound wound Work worked wrought worked, wrought Wring wrung, wringed wrung, wringed Write wrote, writ writ, written

NOTE 1.—The old forms of the past tense, sang, spake, sprang, forgat, &c. are here placed among the obsolete words. They are entirely obsolete, in ordinary practice, whether popular or polite; and it seems advisable not to attempt to revive them. In addition to this reason for omitting them, there is one which is not generally understood. The sound of a in these and all other like cases, was originally the broad a or aw; which sound, in the Gothic and Saxon, as in the modern Scotch, corresponded nearly with o in spoke, succre. Spoke is therefore nearer to the original than spake, as we now pronounce the vowel a with its first or long sound as in sake.

NOTE 2.—In the use of the past tense and participle of some of these verbs, there is a diversity of practice; some authors retaining those which others have rejected as obsolete. Many words which were in use in the days of Shakspeare and Lord Bacon are now wholly laid aside; others are used only in books, while others are obsolescent, being occasionally used; and a few of the old participles, having lost the verbal character, are used only ar attributes. Of the last mentioned species, are fraught, drunken, molten, beholden, shorn, clad, bounden, cloven. Holpen is entirely obsolete. Holden, swollen, gotten and forgotten, are nearly obsolete in common parlance. Wrought is evidently obsolescent; stricken is used only in one phrase, stricken in age or years, which we learn from the bible; but in every other case, is inelegant and pedantic.

(eD

Bishop Lowth has attempted to revive the use of many of the obsolescent past tenses and participles, for which he has, and I think deservedly, incurred the severe animal versions of eminent critics. "Is it not surprising, says Campbell on Rhetoric, b. 2, ch. 2, that one of Lowth's penetration should think a single person entitled to revive a form of inflection in a particular word, which had been rejected by all good writers of every denomination, for more than a hundred and fifty years." This writer declares what Lowth has advanced on the use of the past tense and participle, to be inconsistent with the very first principles of grammar. He observes justly that authority is every thing in language, and that this authority consists in reputable, national, present usage.

Independent of authority however, there are substantial reasons in the language itself for laying aside the participles ending with

en, and for removing the differences between the past time and participle. In opposition to the opinion of Lowth, who regrets that our language has so few inflections, and maintains that we should preserve all we have, I think it capable of demonstration that the differences between the past time and participle of the past tense of our irregular verbs, is one of the greatest inconveniences in the language. If we used personal terminations to form our modes and tenses like the Greeks, it would be desirable that they should be carefully retained. But as we have no more than about half a dozen different terminations, and are therefore, obliged to form our modes and tenses by means of auxiliaries, the combination of these forms a part of the business of learning the language, which is extremely difficult and perplexing to foreigners. Even the natives of Scotland and Ireland do not always surmount the difficulty. This difficulty is very much augmented by the difference between the past tense and the participle. To remove this difference, in words in which popular usage has given a lead, is to obviate, in a degree, this inconvenience. This is recommended by another circumstance--- it will so far reduce our irregular verbs to an analogy with the regular, whose past tense and participle of the perfect are alike.

In a number of words, the dropping of n in the participle, will make a convenient distinction between the participle and the attribute; for in the latter, we always retain en—we always say a written treatise, a spoken language, a hidden mystery—though the best authors write, a "mystery hid from ages;" "the language spoke in Bengal."

Besides, whenever we observe a tendency in a nation to contract words, we may be assured that the contraction is found to be convenient, and is therefore to be countenanced. Indeed if I mistake not, we are indebted to such contractions for many real improvements; as write from gewrite; slain from ofslegen; fastened from gefastnode; men from monnan; holy from haligan, &c. And as a general remark, we may be assured that no language ever suffers the loss of a useful word or syllable. If a word or syllable is ever laid aside in national practice, it must be because it is not wanted, or because it is harsh and inconvenient in use, and a word or syllable more consonant to the general taste of a nation or state of society, is substituted.

Such is the fact with our participles in en; the e being suppressed in pronunciation, we have the words spokn, writtn, holdn, in actual practice. Nothing can be more weak, inefficient and disagreeable than this nasal sound of the half rowel n—it is disagreeable in prose, feeble in verse, and in music, intolerable. Were it possible to banish every sound of this kind from the language, the change would be desirable. At any rate, when people in general have laid aside any of these sounds, writers, who value the beauties of language, should be the last to revive them.

We need not however trouble ourselves to discuss the utility or propriety effretaining these participles; for it is a fact as curious

as important, that no word, syllable or phrase entirely obsolete in common usage, was ever yet recalled into popular use. On the other hand, whatever is thus obsolete among the body of a people, is ultimately neglected by the learned. However the learned therefore may pride themselves in their superior attainments, and in their right to control the usages of a nation, the history of languages will evince, that they must at last be borne away upon the current of popular practice.

Men of letters may revolt at this suggestion: but if they will attend to the history of our own language, they will find the fact to be as here stated. It is commonly supposed that the tendency of this practice of unlettered men is to corrupt the language. But the the fact is directly the reverse. I am prepared to prove, were it consistent with the nature of this work, that nineteen twentieths of all the corruptions of our language, for five hundred years past have been introduced by authors-men who have made alterations in particular idioms which they did not understand. The same remark is applicable to the orthography and pronunciation. The tendency of unlettered men is to uniformity-to analogy; and so strong is this disposition, that the common people have actually converted some of our irregular verbs into regular ones. It is to unlettered people, that we owe the disuse of holpen, bounden, sitten. and the use of the regular participles swelled, helped, worked, in the place of the ancient ones. This popular tendency is not to be contemned and disregarded, as some of the learned affect to do, for it is governed by the natural, primary principles of all languages, to which we owe all their regularity and all their melody; viz. love of uniformity in words of a like character, and a preference of an easy natural pronunciation, and a desire to express the most ideas with the smallest number of words and syllables. It is a fortunate thing for language that these natural principles generally prevail over arbitrary and artificial rules.

Defective Verbs.

Verbs which want the past time or participle, are deemed defective. Of these we have very few. The auxiliaries may, can, will, shall, must, having no participle, belong to this class. Ought is used in the present and past tenses only, with the regular inflection of the second person only—I ought, thou oughtest, he ought. We you, they ought. Quoth is wholly obsolete, except in poetry and burlesque. It has no inflection, and is used chiefly in the third person, with the nominative following it, quoth he. Wit, to know, is obsolete, except in the infinitive, to introduce an explanation or enumeration of particulars; as "There are seven persons, to wit, four men and three women." Wot and wist are entirely obsolete.

Adverbs or Modifiers.

Adverbs are a secondary part of speech. Their uses are to enlarge, restrain, limit, define, and in short, to modify the sense of other words.

Adverbs may be classed according to their several uses.

1. Those which qualify the actions expressed by verbs and participles; as "a good man lives *piously*;" "a room is elegantly furnished." Here *piously* denotes the manner of living—elegantly, denotes the manner of being furnished. The words of this kind, which are very numerous, are really compound adjectives, formed by annexing the attribute like to any other attribute—*pious-like*, elegant-like. The phrases mentioned, when expressed according to the primitive idiom, stand thus; "he lives pious-like;" "a room elegant-like furnished." So that the most numerous class of modifiers of verbs are really attributes or adjectives; but being used as the qualifiers of verbs and other attributes, and not to express the qualities of names, they may well take a different appellation.

In this class may be ranked a number of other words, as when, soon, then, where, whence, hence, and many others, whose use is to modify verbs.

2. Another class of modifiers are words usually called prepositions, used with verbs to vary their signification; for which purpose they generally follow them in construction; as to fall on, give out, bear with, cast up; or they are prefixed and become a part of the word; as overcome, underlay. In these uses, these words modify, or change the sense of the verb; and when prefixed, are united with the verb in orthography.

3. The other class of modifiers consists of old Saxon verbs or other words; as if, though, whether, unless, else, lest, whose use is to give a conditional or hypothetical form to sentences; and if a distinction of names should be thought useful, they may be called *modifiers of sentences*. They have been most improperly classed with conjunctions.

A few modifiers admit the terminations of comparison; as soon, sooner, soonest; often, oftener, oftenest. Most of those which end in ly, may be compared by more and most, less and least; as more justly, more excellently; less honestly, least criminally.

NOTE.—The numerous distinctions of modifiers into those of time, place and quantity, causal, illative, adversative, &c. seems to be more perplexing than useful. We might as well make the definition of every word in our dictionaries the foundation of a class, as to recognize the divisions of this species of words, with which the ingenity of authors has filled our grammars.

Prepositions.

Prepositions, so called from their being *put before* other words, serve to connect words and show the relation between them; or to show the condition of things. Thus a man of benevolence, denotes a man who possesses benevolence. Christ was crucified between two thieves. Receive the book from John and give it to Thomas.

The prepositions most common, are, to, for, by, of, in, into, on, upon, among, between, betwixt, up, over, under, beneath, against, from, out, with, through, at, towards, before, behind, after, without, across.

We have a number of particles, which serve to vary or modify the words to which they are prefixed, and which are sometimes called *inseparable prepositions*, because they are never used, but as parts of other words—such are a, be, con, mis, pre, re, sub, in abide, become, conjoin, mistake, prefix, return, subjoin, &c. These may be called prefixes.

Connectives or Conjunctions.

Connectives are words which unite words and sentences in construction, joining two or more simple sentences into one compound one, and continuing the sentence at the pleasure of the writer or speaker. They also begin sentences after a full period, manifesting some relation between sentences in the general tenor of discourse.

The connectives of most general use, are and, or, either, nor, neither, but, than. To which may be added because.

And is supposed to denote an addition; as "The book is worth four shillings and sixpence." That is, it is worth four shillings, add sixpence, or with sixpence added. "John resides at New-York, and Thomas, at Boston." That is, John resides at New-York, add, [add this which follows,] Thomas resides at Boston. From the great use of this connective in joining words of which the same thing is affirmed or predicated, it may be justly called the copulative by way of eminence.

The distinguishing use of the connective is to save the repetition of words; for this sentence "John, Thomas and Peter reside at York," contains three simple sentences;" "John resides at York,"—"Thomas resides at York,"—"Peter resides at York;" which are all combined into one, with a single verb and predicate, by means of the copulative.

Either and or have been already explained under the head of substitutes; for in strictness they are the representatives of sentences or words; but as or has totally lost that character, both these words will be here considered as connectives. Their use is to express an alternative, and I shall call them alternatives. Thus "Either John or Henry will be at the Exchange," is an alternative sentence; the verb or predicate belonging to one or the other; but not to both; and whatever may be the number of names or propositions thus joined by or, the verb and predicate belong to one only.

One very common use of or, is to join to a word or sentence, something added by way of explanation or definition. Thus "No disease of the mind can more fatally disable it from benevolence, than ill-humor or peevishness." Rambler, No. 74. Here peevishness is not intended as a distinct thing from ill-humor, but as another term

for the same idea. In this case, or expresses only an alternative of words, and not of signification.

As either and or are affirmative of one or other of the particulars named, so neither and nor are negative of all the particulars. Thus "For I am persuaded that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature shall be able to separate us from the love of God." Rom. viii. 38. Here neither is in fact a substitute for each of the following particulars -all of which it denies to be able to effect a certain purpose-not either of these which follow shall separate us from the love of God. It is laid down as a rule in our grammars, that nor must always answer to neither; but this is a great mistake, for the negation of neither, not either, extends to every one of the following alternatives. But nor is more generally used, and in many cases, as in the passage just recited, is far the most emphatical.

But is used for two Saxon words, originally by mistake, but now by established custom; bet or bote, the radical of our modern words better, boot, and denoting sufficiency, compensation, more, further, or something additional, by way of amendment; and beuton or butan, equivalent to without or except.

In the former sense, we have the word in this sentence; "John resides at York, but Thomas resides at Bristol." The primitive sense here is, John resides at York; more, add or supply, Thomas resides at Bristol. It does not signify opposition, as is usually supposed, but some addition to the sense of what goes before.

In the latter sense, or that of *butan*, it is used in this passage "He hath not grieved me, *but* in part." 2. Cor. ii. 5. that is, "He hath not grieved me, *except* in part." The first assertion is a complete negation; the word *but*, (beutan,) introduces an exception.—"Nothing, *but* true religion, can give us peace in death." Here also is a complete negation, with a saving introduced by *but*. Nothing, except true religion.

These were the only primitive uses of but, until by means of a mistake, a third sense was added, which is, that of only.

Not knowing the origin and true meaning of but, authors omitted the negation in certain phrases where it was essential to a true construction; as in the following passages "Our light affliction which is but for a moment." 2. Cor. 4. "If they kill us, we shall but die." 2. Kings, 7.

The but, in these passages, is buton, be out, except; and according to the true original sense, not should precede, to give the sentence a negative turn; "Our light affliction is not, but (except) for a moment." "We shall not, but die." As they now stand, they would in strictness signify, Our light affliction is except for a moment.— We can except die, which would not be sense. To correct the sense, and repair the breach made in the true English idiom, by this mistake, we must give but a new sense, equivalent to only. Thus we are obliged to patch and mend, to prevent the mischiefs of innovation.

The history of this word but should be, as Johnson expresses the idea, "a guide to reformers, and a terror to innovators." The first blunder or innovation blended two words of distinct meanings into one, in orthography and pronunciation. Then the sense and etymology being obscured, authors proceeded to a further change, and suppressed the negation, which was essential to the buton. We have now therefore one word with three different and unallied meanings; and to these may be reduced the whole of Johnson's eighteen definitions of but.

Let us however trace the mischief of this change a little further. As the word but is now used, a sentence may have the same meaning with or without the negation. For example: "he hath not grieved me, but in part"—and "he hath grieved me, but in part," have, according to our present use of but, precisely the same meaning. Or compare different passages of scripture, as they now stand in our bibles.

He hath not grieved me, but in part.

Our light affliction is but for a moment.

This however is not all; for the innovation being directed neither by knowledge nor judgement, is not extended

to all cases, and in a large proportion of phrases to which but belongs, it is used in its original sense with a preceding negation, especially with nothing and none. There is none good, but one, that is God." Matt. xix. 17. This is correct—there is none good, except one, that is God. "He saw a fig-tree in the way, and found nothing thereon but leaves only." Matt. 21. 19. This is also correct— "he found nothing, except leaves," the only is redundant. "It amounts to no more but this." Locke Und. b. 1. 2. This is a correct English phrase; "it amounts to no more, except this," but it is nearly obsolete.

Hence the propriety of these phrases; "They could not, but be known before." Locke. 1. 2. "The reader may be, nay cannot chuse but be very fallible in the understanding of it." Locke. 3. 9. Here but is used in its true sense—They could not, except this, be known before. That is, the contrary was not possible. The other phrase is frequently found in Shakspeare and other old writers, but is now obsolete. They cannot chuse but —that is, they have no choice, power or alternative, szcept to be very fallible.

But is called in our grammars, a disjunctive conjunction, connecting sentences, but expressing opposition in the sense. To illustrate the use of this word which joins and disjoins at the same time, Lowth gives this example; "You and I rode to London, but Peter staid at home."-Here the Bishop supposed the but to express an opposition in the sense. But let but be omitted, and what difference will the omission make in the sense? "You and I rode to London, Peter staid at home." Is the opposition in the sense less clearly marked than when the conjunction is used ? By no means. And the truth is, that the opposition in the sense, when there is any, is never expressed by the connective at all, but always by the following sentence or phrase : " They have mouths, but they speak not; eyes have they, but see not." Psalm 115. 5. Let but be omitted-" They have mouths, they speak not; eyes have they, they see not." The omission of the connectives makes not the smallest alteration in the sense, so far as opposition or difference of idea in the mem-

bers of the sentence is concerned. Indeed the Bishop is most unfortunate in the example selected to illustrate his rule; for the copulative and may be used for but, without the least alteration in the sense—" You and I rode to London, and Peter staid at home." In this sentence the opposition is as completely expressed as if but was used; which proves that the opposition in the sense has no dependence on the connective.

Nor is it true that an opposition in the sense always follows but; "Man shall not live, by bread alone, but by every word which proceedeth out of the mouth of God." Mat. 4. 4. Here the last clause expresses no opposition, but merely an additional fact. The true sense of but when used for bote, is supply, more, further, something additional, to complete the sense—it may be in opposition to what has preceded or in continuation only. In general, however, the word but is appropriately used before a clause of a sentence, intended to introduce a new and somewhat different idea, by way of modifying the sense of the preceding clause. This use is very naturally deduced from the original sense of the word, something further which is to make complete or qualify what has preceded.

Than is a connective of comparison; "John is taller than Peter."

Because is a mere compound of by and cause-by cause.

"It is the case of some to contrive some false periods of business, because they may seem men of despatch." Bacon of Dispatch. See also Apoth. 7.6. This is a correct English idiom, Dr. Lowth's criticism to the contrary notwithstanding; but it is now obsolete.

Exclamations.

Exclamations are sounds uttered to express passions and emotions; usually those which are violent or sudden. They are called *interjections*, words *thrown in* between the parts of a sentence. But this is not always the fact, and the name is insignificant. The more appropriate name is, exclamations; as they are mere irregular sounds, uttered as passion dictates and not subject to rules. A few of these sounds however become the customary modes of expressing particular passions and feelings in every nation. Thus in English, joy and surprise and grief are expressed by oh, uttered with a different tone and countenance. Alas expresses grief or great sorrow pish, pshaw, express contempt. Sometimes verbs, names, and attributes are uttered by way of exclamation in a detached manner; as Hail! Welcome! Bless me! Gracious heavens!

In two or three instances, exclamations are followed by names and substitutes in the nominative and objective as O, thou in the nominative—ah me in the objective. Sometimes that follows O, expressing a wish—"O that the Lord would guide my ways." But in such cases, we may consider wish or some other verb to be understood.

Derivation.

However numerous may be the words in a language, the number of radical words is small. Most words are formed from others by addition of certain words or syllables, which were originally distinct words, but which have lost their distinct character, and are now used only in combination with other words. Thus er in lover, is a contraction of wer, a Saxon word denoting man, [the Latin vir;] ness denotes state or condition; ly is an abbreviation of like or liche; fy is from facio, to make, &c.

Most of the English derivatives fall under the following heads :

1. Names formed from names, or more generally from verbs, by the addition of r, er or or, denoting an agent; as lover, hater, assignor, flatterer, from love, hate, assign, flatter. In a few instances, words thus formed are less regular; as glazier, from glass, courtier, from court, parishioner, from parish.

2. Names converted into verbs by the prefix to, as from water, cloud, to water, to cloud.

3. Attributes converted into verbs'in the same manner; as to lame, to cool, to warm, from lame, cool, warm.

10*

4. Verbs formed from names and attributes by the termination *ize*; as method, methodize; system, systemize; moral, moralize. When the primitive ends with a vowel, the consonant *t* is prefixed to the termination; as stigma, stigmatize.

5. Verbs formed from names and attributes by the addition of en or n; as lengthen, widen, from length, wide.

6. Verbs formed by fy; as brutify, stratify, from brute, stratum.

7. Names formed from attributes by-ness; as goodness, from good; graciousness, from gracious.

8. Names formed by *dom* and *ric*, denoting jurisdiction; **ar hingdom**, bishopric, from king and bishop. *Dom* and *ric*, are nouns denoting jurisdiction or territory.

9. Names formed by hood and ship denoting state or condition; as manhood, lordship, from man, lord.

10. Names ending in ment and age, from the French, denoting state or act; as commandment, parentage, from command, parent.

11. Names in er, or and ee, used by way of opposition, the former denoting the agent, the latter the receiver or person to whom an act is performed; as assignor, assignee; indorser, indorsee.

12. Attributes formed from names by the addition of y; as healthy, from health; pithy, from pith; or ly adted to the name; as stately, from state. Ly is a contraction of like.

13. Attributes formed from names by the addition of ful; as hopeful, from hope.

14. Attributes formed from names or verbs by *ible* or *able*; as payable, from pay; creditable from credit; compressible, from compress. *Able* denotes power or capacity.

15. Attributes formed from names or attributes by *ish*; as whitish, from white; blackish, from black; waggish, from wag.

16. Attributes formed from names by less; as fatherless, from father, noting destitution.

17. Attributes formed from names by ous; as famous, from fame, gracious, from grace."

18. Attributes formed by adding some to names; as delightsome, from delight.

19. Modifiers formed from attributes by ly, as sweetly, from sweet.

20. Names to express females formed by adding ess to the masculine gender; as heiress, from heir. Ess is from the Hebrew essa, a female.

21. Names ending in *ly*, some directly from the Latin, others formed from attributes; as responsibility, from responsible; contractility, from contractile; probity, from probitas.

22. Attributes formed by adding al to names; as national, from nation.

23. Attributes ending in *ic* mostly from the Latin, or French, but some of them by the addition of *ic* to a name; as balsamic, from balsam; sulphuric from sulphur.

24. Names formed by ate to denote the union of substances in salts; as carbonate, in the chemical nomenclature, denotes carbonic acid combined with another body.

25. Names ending in *ite* from other names and denoting salts formed by the union of acids with other bodies, as sulphite, from sulphur.

26. Names ending in *ret* formed from other names, and denoting a substance combined with an alkaline, earthy or metallic base; as sulphuret, carburet, from sulphur and carbon.

A PHILOSOPHICAL AND

27. Names formed from other names by adding cy; as ensigncy, captaincy, from ensign, captain.

Words are also formed by prefixing certain syllables and words, some of them significant by themselves; others never used but in composition: as re, pre, con, mis, sub, super; and great numbers are formed by the union of two words; as bed-room, ink-stand, pen-knife.

Syntax.

Syxtax teaches the rules to be observed in the construction of sentences.

A sentence is a number of words arranged in due order, and forming a complete affirmation or proposition. In philosophical language, a sentence consists of a subject and a predicate, connected by an affirmation. Thus "God is omnipotent," a complete proposition or sentence, composed of God, the subject, omnipotent, the predicate or thing affirmed, connected by the verb is, which forms the affirmation.

The predicate is often included in the verb; as "the sun shines."

A simple sentence then contains one subject and one personal verb; that is the *name* and the verb; and without these, no proposition can be formed.

A compound sentence consists of two or more simple sentences, joined by connectives. The divisions of a compound sentence may be called members or clauses.

Sentences are declaratory, as I am writing; the wind blows—imperative, as go, retire, be quiet—interrogative, as where am I? who art thou? or conditional, as if he should arrive.

The rules for the due construction of sentences fall under three heads. *First*, concord or agreement—*Second*, government—*Third*, arrangement and punctuation.

In agreement, the *name* or noun is the controlling word, as it carries with it the verb, the substitute and the attribute. In government, the verb is the controlling word; but names and prepositions have their share of influence also.

PRACTICAL GRAMMAR.

Agreement or Concord.

RULE I.

A verb must agree with its nominative in number and person.

Examples.

In solemn style. "Thou hast loved righteousness." Heb. 1. 9.

"Thou madest man a little lower than the angels, and crownedst him with glory and honor." Heb. 2. 7.

"Thou shalt not steal." Commandment.

"Art thou called, being a servant ?" 1 Cor. 7. 21.

"But ye are washed; but ye are sanctified." 1 Cor. 6.11.

" Know ye not that we shall judge angels."

1 Cor. 1. 2.

"Do ye not know that the saints shall judge the world." 1 Cor. 1. 2.

In familiar language, "This is the word of promise." Rom. 9. 9.

I write; John reads; Newton was the first of astronomers; we are astonsihed at his discoveries; are you pleased with the new chemistry; Emilia has an elegant form.

Note.—The nominative to a verb is found by young learners, by asking who or what does what is affirmed. "Eumenes, a young man of great abilities, inherited a large estate from his father. His father harrassed with competitions, and perplexed with a multiplicity of business, recommended the quiet of a private station." Let the question be asked, who inherited a large estate? The answer is *Eumenes*, which is the nominative to the verb inherited. Who recommended the quiet of a private station? Which is therefore the nominative to the verb inherited.

A PHILOSOPHICAL AND

NOTE 2.-Let the following rules be observed respecting the position of the nominative.

1. The nominative usually precedes the verb in declaratory phrases; as "God created the world;" "the law is a rule of right." But the nominative may be separated from its verb, by a member of a period; as *Liber*ty, say the fanatic favorers of popular power, can only be found in a democracy." Anarch. ch. 62.

II. The nominative often follows an intransitive verb, for such a verb can have no object after it, and that position of the nominative creates no ambiguity : thus "Above it stood the Seraphim." Isa. 6. "Gradual sinks the breeze." Thomson.

III. When the verb is preceded by here, there, hence, thence, then, thus, yet, so, nor, neither, such, the same, herein, therein, wherein, and perhaps by some other words, the nominative may follow the verb, especially be; as "here are five men;" "there was a man sent from God;" "hence arise wars;" "thence proceed our vicious habits;" "then came the scribes and pharisees;" "thus saith the Lord;" "yet required not I bread of the governor." Neh. 5. 18. "So panteth my soul after thee, O Lord." Psalm 42. "Neither hath this man sinned nor his parents." John 9. "Such were the facts;" "the same was the fact." "Herein consists the excellency of the English government."

Blacks. Com. b. 1.

IV. When an emphatical attribute introduces a sentence, the nominative may follow the verb; as "Great is the Lord, glorious are his works, and happy is the man who has an interest in his favor."

V. In certain phrases, which are conditional or hypothetical, the sign of the condition may be omitted, and the nominative placed after the auxiliary; as "Did he but know my anxiety;" for, if he did but know—" Had I

known the fact," for if I had known---"Would they consent," for, if they would, &c.

VI. When the words whose, his, their, her, mine, your, &c. precede the verb with a governing word, the nominative may follow the verb; as "Out of whose modifications have been made most complex modes."

Locke 2. 22. 10.

VII. In interrogative sentences, the nominative follows the verb when alone, or the first auxiliary; as believest thou? Will he consent? Has he been promoted? The nominative also follows the verb in the imperative mode; as go thou, "be ye warmed and filled." But after a single verb, the nominative is commouly omitted; as arise, flee.

NOTE 3.—In poetry, the nominative is often omitted in interrogative sentences, in cases where in prose the omission would be improper; as "Lives there who loves his pain." *Millon.* That is, lives there a man or person.

NOTE 4.—In the answer to a question the whole sentence is usually omitted, except the name, which is the principal subject of the interrogation; as "who made the chief discoveries concerning vapor? Black." "Whose theory of respiration is generally received? Crawford's."

Norz 5.—In poetry, the verb in certain phrases is omitted, chiefly such verbs as express an address or answer; as "To whom the monarch"—that is, said or replied.

NOTE 6.—When a verb is placed between two nominatives in different numbers, it may agree with either; but generally is made to agree with the first, and this may be considered as preferable; as "His meat vox locusts and wild houey." It [piracy] is the remains of the manuers of ancient Greece." Anarch. ch. 36.

NOTE 7.—Verbs follow the connective *than*, without a nominative expressed; as "Not that any thing occurs in consequence of our lateloss, more afflictive than *was* to be expected." *Life of Coup. Let.* 62.

"He felt himself addicted to philosophical speculations, with more ardor than consisted with the duties of a Roman and a senator." Murphy's Tacitus. 4. 57. "All words that lead the mind to any other ideas, than are supposed really to exist in that thing." Locke 2. 25.

These forms of expression seem to be eliptical; "more afflictive than that which was to be expected." That which or those which will generally supply the ellipsis.

NOTE 8.—We sometimes see a nominative introducing a sentence, the sense suddenly interrupted, and the nominative left without its intended verb; as "The name of a procession; what a great mixture of independent ideas of persons, habits, tapers, orders, motions, sounds does it contain," &c. Locke 3.5.13. This form of expression is often very striking in animated discourse. The first words being the subject of the discourse and important, are made to usher in the sentence, to invite attention; and the mind of the speaker, in the fervor of animation, quitting the trammels of a formal arrangement, rushes forward to a description of the thing mentioned, and presents the more striking ideas in the form of exclamation.

NOTE 9.—We have one phrase in which the personal substitute me precedes a verb in the third person—methinks, methought. Anciently him was used in like manner—him thutte, him thought. Alf. Orosius. And names also; as "tham halgan Gast was gethubt." It thought (or seemed good) to the Holy Ghost. Lamb. Sax. Laws. 21. Him, me and tham are here in the Saxon dative case. Me thinks, it seems to me, mihi videtur.

RULE II.

A name, a nominative case or a sentence joined with a participle of the present tense, may stand in construction without a verb, forming the Case absolute, or Clause independent; as "Jesus had conveyed himself away, a multitude being in that place." John 5. 13. Here multitude, the name, joined with being, stands without a verb.

"By memory we conceive heat or light, yellow or sweet, the object being removed." Locke 2. 10.

"I have, notwithstanding this discouragement, attempted a dictionary of the English language."

Johnson's Preface.

"Whatever substance begins to exist, it must, during its existence, necessarily be the same."

Locke 2. 27. 28.*

"The penalty shall be fine and imprisonment, any law or custom to the contrary notwithstanding."

The latter phraseology is peculiar to the technical law style. In no other case, does notwithstanding follow the sentence. But this position makes no difference in the true construction, which is, "any law or custom to the contrary not opposing"—the real clause independent.

It is very common, when this participle agrees with a number of words, or a whole clause, to omit the whole except the participle; and in this use of notwithstanding, we have a striking proof of the value of abbreviations in language. For example; "Moses said, let no man leave of it till the morning. Notwithstanding, they hearkened not unto Moses." Ex. 16. 20. Here notwithstanding stands without the clause to which it belongs; to complete the sense in words, it would be necessary to repeat the whole preceding clause or the substance of it—"Moses said, let no man leave of it until the morning. Notwithstanding this command of Moses, or notwithstanding Moses said that which has been recited, they hearkened not unto Moses."

"Folly meets with success in this world; but it is true, notwithstanding, that it labors under disadvantages."— Porteus. Lecture 13. This passage at length would read thus—"Folly meets with success in the world; but it is true, notwithstanding folly meets with success in the world, that it labors under disadvantages." By supplying what is really omitted, yet perfectly well understood, we learn

^{*} During is the participle of an old verb now obsolete; but its derivatives endure and enduring are in use. During is usually called a preposition; but no consideration can justify the praotice—it retains its true verbal sense. Equally erroneous is the classification of notwithstanding, with conjunctions. The two words, not and withstanding are joined indeed without reason; but the resolution of sentences in which this compound is found, demands a restoration of it to its true place and character.

the true construction; so that notwithstanding is a participle always agreeing with a word or clause, expressed or understood, and forming the independent clause, and by a customary ellipsis, it stands alone in the place of that clause.

Such is its general use in the translation of the Scriptures. In the following passage, the sentence is expressed—" Notwithstanding I have spoken unto you." Jer. 35. That is, "This fact, I have spoken unto you, not opposing or preventing." Or in other words, " In opposition to this fact."

It is also very common to use a substitute this, that, which or what, for the whole sentence; as "Bodies which have no taste, and no power of affecting the skin, may, notwithstanding this, [notwithstanding they have no taste, and no power to effect the skin] act upon organs which are more delicate. Fourcroy. Translation.

I have included in hooks, the words for which this is a substitute.

"To account for the misery that men bring on themselves, notwithstanding that, they do all in earnest pursue happiness, we must consider how things come to be represented to our desires under deceitful appearances."

Locke 2. 21. 61.

Here that, a substitute, is used, and the sentence also for which it is a substitute. This is correct English, but it is usual to omit the substitute, when the sentence is expressed—"Notwithstanding they do all in earnest pursue happiness."

It is not uncommon to omit the participle of the present tense, when a participle of the perfect tense is employed—" The son of God, while clothed in flesh, was subject to all the frailties and inconveniences of human nature, sin excepted." Locke 3.9. That is, sin being excepted; the clause independent.

This omission is more frequent when the participle provided is used, than in any other case. "In the one case, provided the facts on which it is founded be sufficiently numerous, the conclusion is said to be morally cerva**rti**-

ed or d by

that

-

tain." Campbell on Rhet. 1. 114. Here being is omitted, and the whole clause in italics is independent— "The facts on which it is founded are sufficiently numerous, that being provided, the conclusion is morally certain.-Provided, in such cases, is equivalent to given, admitted or supposed.

"In mathematical reasoning, provided you are ascertained of the regular procedure of the mind, to affirm that the conclusion is false, implies a contradiction."

ibm. 134.

In this phrase, that may follow provided—provided that, you are ascertained, &c. as in the case of notwithstanding, before mentioned—that being a definitive substitute, pointing to the following sentence—that which follows being provided.*

To this construction must be referred since. "The Lord hath blessed thee since my coming." Gen. 30. 30. That is, my coming being seen. This was a Saxon expression to fix the time of an event, or its beginning and continuation, which were represented by the idea of seeing it. "As he spoke by the mouth of his holy prophets, which have been, since the world began." Luke 1. 70. That is, "the world began being seen"—that fact being in existence.

It is not uncommon for authors to carry the practice of abridging discourses so far as to obscure the common regular construction. An instance frequently occurs in the omission both of the nominative and the participle in the case independent. For example : "Conscious of his own weight and importance, his conduct in parliament would be directed by nothing but the constitutional duty of a peer." Junius Let. 19. Here is no noun expressed to supply the necessary words, to complete the construc-

* Provided that, says Johnson, is an adverbial expression, and we sometimes see provided numbered among the conjunctions, as its correspondent word is in French. What strange work has been made with Grammar !

A PHILOSOPHICAL AND

tion-"" He being conscious" -- forming the clause independent.

RULE III.

A sentence, a number of words, or a clause of a sentence may be the nominative to a verb, in which case the verb is always in the third person of the singular number; as "All that is in a man's power in this case, is, only to observe what the ideas are which take their turns in the understanding." Locke 2. 14. Here the whole clause in italics is the nominative to is.

"To attack vices in the abstract, without touching persons, may be safe fighting indeed, but it is fighting with shadows." Pope. Let. 48.

"I deny that men's coming to the use of reason, is the time of their discovery." Locke 1. 2.

"That any thing can exist without existing in space, is to my mind incomprehensible." Darwin. Zoon. sect. 14. Here the definitive substitute may be transferred to a place next before the verb—"Any thing can exist, without existing in space," that [whole proposition] is incomprehensible.

No species of sentences fall under this rule more frequently than those which begin with the infinitive mode. "To show how the understanding proceeds herein, is the design of the following discourse." Locke 1. 4.

This sentence may be inverted without the change of a single word. "The design of the following discourse is to show," &c.

"To fear no eye and to suspect no tongue, is the great prerogative of innocence." Rambler. This sentence may be inverted; but according to our idiom, the substitute it would precede the verb—"it is the great prerogative of innocence to fear," &c. The sentence thus inverted would be good English without the substitute—

^{ci} The great prerogative of innocence is"—but this alters the sense, and limits the prerogatives of innocence to the one mentioned. By changing *the* to *a*, this inconvenience would be remedied; but in either case the force of the sentiment would be impaired.

"Our ideas of eternity can be nothing but an infinite succession of moments of duration." Locke 2. 17. 16. "The notion they have of duration, forces them to conceive," &c. ibm. In these passages, we observe the nominative or subject of the affirmation consists of several words; for it is not simply an idea which is affirmed to be nothing but an infinite succession of moments of duration; but our idea of eternity. In like manner, attributes and other words often make an essential part of the nominative. "A wise son maketh a glad father; but a foolish son is the heaviness of his mother." Abstract the name from its attribute, and the propositions cannot always be true—"A son maketh a glad father"—a son is the heaviness of his mother."

"He that gathereth in summer is a wise son." Here the predicate belongs to the person described—"He that gathereth in summer." Take away the description; that gathereth in summer, and the affirmation ceases to be true or becomes inapplicable.

These sentences or clauses thus constituting the subject of an affirmation, may be termed *nominative senten*ces.

RULE IV.

The Infinitive mode may be the nominative to a personal verb; as "to see is desirable; to die is the inevitable lot of men." Sometimes an attribute is joined with the infinitive; as "to be blind is calamitous." In this case the attribute has no name expressed to which it refers. The proposition is abstract, and applicable to any buman being, but not applied to any.

11*

RULE V.

In some cases the imperative verb is used without a definite nominative; as "I will not take any thing that is thine—save only that which the young men have eaten." Gen. xiv. 24.

"Israel burned none, save Hazor only." Josh. xi. 13.

"I would that all—were such as I am, except these bonds." Acts xxvi. 29.

"Our ideas are movements of the nerves of sense, as of the optic nerve in recollecting visible ideas, suppose of a triangular piece of ivory." Darwin. Zoon. Lect. 39.

This use of certain verbs in the imperative is very frequent, and there is a peculiar felicity in being thus able to use a verb in its true sense and with its proper object, without specifying a nominative; for the verb is thus left applicable to the first, second or third person. I may save or except, or you may except, or we may suppose If we examine these sentences, we shall be convinced of the propriety of the idiom; for the ideas require no application to any person whatever.

RULE VI.

When the same thing is affirmed or predicated of two or more subjects, in the singular number, the nominatives are joined by the copulative and, with a verb agreeing with them in the plural number; as "John and Thomas and Peter reside at Oxford." In this sentence, residence at Oxford is a predicate common to three persons—and instead of three affirmations—John resides at Oxford, Thomas resides at Oxford, Peter resides at Oxford; the three names are joined by and, and one verb in the plural applied to the whole number.

"Reason and truth constitute intellectual gold, which defies destruction." Johnson. "Why are whiteness and coldness in snow?" Locke. "Your lot and mine, in this respect, have been very different." Cowp. Let. 38.*

In like manner, names and attributes, representing all the subjects or particulars connected by and, must be in the plural number; as "Plato and Aristotle were learned men; these philosophers founded the Academic and Peripatetic schools." "The most able generals of the last century were Frederick of Prussia, the Duke of Marlborough and Prince Eugene." "We look on the whiteness and softness, produced in the wax, not as qualities in the sun, but effects produced by its powers." Locke 2. 8.

When three or more particulars are enumerated, the connective may be omitted, except before the last; as "The particular bulk, number, figure and motion of the parts of fire or snow are really in them." Locke 2. 8. The copulative may however be inserted, where the repetition of it adds to the ideas dignity, force or solemnity.

When terms of number are employed to specify the particulars, the copulative is suppressed; as "These three then, first the law of God, secondly the law of political societies, thirdly the law of fashion or private censure, are those to which men compare their actions." Locke 2. 28. 13.

NOTE 1.—The rule for the use of a plural verb with two or more names in the singular number, connected by *snd*, is laid down by critics with too much positiveness and universality. On original principles, all the names, axcept the first, are in the objective case; for it is probable that and contains in it the verb add. "John and Thomas and Peter reside at York," on primitive principles must be thus resolved—"John, add Thomas, add Peter reside at York." But without resorting to first principles, which are now lost or obscured, the use of the singular verb may be justified by considering the verb to be understood after each name; and that which is expressed, agreeing only with the last; as "Nor were the young fellows so wholly lost to a sense of right, as pride and conceit has since made them affect to be." Rembler No. 97. That is, as pride has and as conceit has. "Their mafety and welfare is most concerned."

*Is the last example an evidence that mine is in the possessive case ! !

ļ

í

į

Spectator No. 121. In our best authors the singular verb is frequent in such sentences.*

What will the hypercritic say to this sentence, "Either sex and every age vos engaged in the pursuits of industry." Gibbon Rom. Emp. ch. 10. Is not the distributive effect of either and every, such as to demand a singular verb? So in the following: "The judicial and every other power is accountable to the legislative." Paley. Phil. 6. 8.

NOTE 2.—When names and substitutes belonging to different persons, are thus joined, the plural substitute must be of the first person in preference to the second and third, and of the second in preference to the third—I, you and he are represented by we; you and he, by you. Pope in one of his letters makes you or I to be represented by we or you. "Either you or I are not in love with the other." The sentence is an awkward one, and not to be imitated.

RULE VII.

When an affirmation or predicate refers to one subject only among a number, which are separately named in the singular number, the subjects are joined by the alternative or or nor, with a verb, substitute and name in the singular number; as "Either John or Peter was at the Exchange yesterday; but neither John nor Peter is there to-day."

Errors. "A circle or square are the same in idea." Locke 2. 8.

"But whiteness or redness are not in the porphyry." ibm.

"Neither of them [Tillotson and Temple,] are remarkable for precision." Blair.

"Sed etiam ipsius terræ vis et natura delectat. ibm. 15.

See Homer Il. 1. 61.

See also examples in the Greek Testament. Matth. 12. 31.-13. 42, 50.-16 17.-28. 1.

^{*}This was also a very common practice with the best Greek and Roman writers—"Mens enim, et ratio, et consilium in senibus est. Cicero. de Senec. ca. 19.

Substitutes for sentences, whether they represent a single clause, or the parts of a compound sentence, are always in the singular number; as "It is true indeed that many have neglected opportunities of raising themselves to honour and to wealth, and rejected the kindest offers of fortune." Rambler No. 58. Here it and that refer to the clauses which follow—"It is true that, many have rejected the kindest offers, &c.

"It being unavoidable in discourses, differing from the ordinary received notions, either to make new words, or to use old words in a new signification." Locke 2. 12. 14. Here it refers to the two alternative clauses which succeed.

RULE VIII.

Collective or aggregate names, comprehending two or more individuals under a term in the singular number, have a verb or substitute to agree with them in the singular or plural; as The council is or are unanimous; the company was or were collected; this people, or these people.

No precise rule can be given to direct, in every case, which number is to be used. Much regard is to be had to usage, and to the unity or plurality of idea. In general, modern practice inclines to the use of the plural verb and substitute; as may be seen in the daily use of clergy, nobility, court, council, commonalty, audience, enemy and the like.

"The clergy began to withdraw themselves from the temporal courts." Blacks. Com. Introduction.

"Let us take a view of the principal incidents, attending the nobility, exclusive of *their* capacity as hereditary counsellors of the crown." Bl. Com. 1. 12.

"The commonalty are divided into several degrees." *ibm*.

"The enemy were driven from their works." Portuguese Asia. Mickle. 163.

"The choras prepare resistance at his first approachthe chorus sings of the battle-the chorus entertains the the case." Johnson's Life of Milton.

"The pobility are the pillars to support the throne." Bl. Com. 1. 2.

Party and army, in customary language, are joined with a verb in the singular number. Constitution cannot be plural. Church may be singular or plural. Mankind is almost always plural.

The most common and palpable mistakes in the application of this rule, occur in the use of sort and kind, with a plural attribute-these sort, those kind. This fault infects the works of our best writers; but these words are strictly singular, and ought so to be used.

When a collective name is preceded by a definitive which clearly limits the sense of the word to an aggregate with an idea of unity, it requires a verb and substitute to agree with it in the singular number; as a company of troops was detached; a troop of cavalry was raised; this people is become a great nation; that assembly was numerous; "a government established by that people." Bl. Com. 1. 2.

Yet our language seems to be averse to the use of it, as the substitute for names even thus limited by a, this or "How long will that people provoke me, and how that. long will it be ere they will believe me for all the signs that I have shewed among them." Num. xiv. 11. "Liberty should reach every individual of a people; as they all share one common nature." Spectator. No. 287. these passages, it in the place of they, would not be relished by an English ear; nor is it ever used in similar cases.*

,

^{*}The Romans used a greater latitude in joining plurals with collective names, than we can-"Magna pars in villis repleti cibo vinoque." Liv. 2. 26. Here is an attribute plural of the masculine gender, agreeing with a noun in the singular, of the feminine gender.

RULE IX.

When the nominative consists of several words, and the last of the names is in the plural number, the verb is commonly in the plural also; "A part of the exports consist of raw silk." "The number of oysters increase." Golds. Anim. Nat. vol. 4, ch. 3. "Of which seeming equality we have no other measure, but such as the train of our ideas have lodged in our memories." Locke. 2. 14. 21. "The greater part of philosophers have ackowledged the excellence of this government." Anarch. vol. 5. 272.

Note 1.—The practice of using a plural verb after these and similar nominatives, is a proof of the propriety of considering the whole of the words or the name and its adjuncts as the actual nominative. Separate the words *part* and *exports* in the first example, and the affirmation of the verb cannot with truth be applied to either; and as the whole must be considered as the nominative, the verb is very naturally connected in number with the last name.

NOTE 2.—When an aggregate amount is expressed by the plural names of the particulars composing that amount, the verb may be in the singular number; as "There was more than a hundred and fifty thousand pounds sterling." Mavor. Voyages, 1.

However repugnant to the principles of grammar this may seem at first view, the practice is correct; for the affirmation is not made of the individual parts or divisions named, the *pounds*, but of the entire sum or amount. See this subject more fully explained under Rule 14.

RULE X.

Pronouns or substitutes must agree with the names they represent, in number, gender and person; as

"Mine answer to them that do examine me is this."

1 Cor. 9. 3.

Digitized by Google

"These are not the children of God." Rom. 9. 8.

"Speak to the *children* of Israel and say to them, when ye come into the land whither I bring you." Num. 15. 18.

A PHILOSOPHICAL AND

"This is the heir, come let us kill him, and let us seize on his inheritance." Matth. 21. 38.

"Esther put on her royal apparel—she obtained favor in his sight—then the king said unto her." Esth. 5.

"A river went out of Eden to water the garden, and *it* was parted." Gen. 2. 10.

"The woman whom thou gavest to be with me."

Gen. 3. 12.

"Ignatius, who was bishop of Antioch, conversed with the apostles." Paley. Evid. sect. 3.

"A letter, which is just received, gives us the news."

"O thou who rulest in the heavens."

Who and whom are exclusively the substitutes for persons; whose is of all genders, and as correctly applied to things as to persons.

"The question whose solution I require." Dryden.

"That forbidden fruit whose mortal taste."-Milton.

"A system whose imagined suns." Golds.

"These are the charming agonies of love Whose miseries delight." Thom.

It, though neuter, is used as the substitute for *infant* or *child*; the distinction of sex in the first period of life being disregarded.

Formerly which was used as a substitute for persons; as appears from old authors, and especially in the vulgar version of the scriptures—"mighty men which were of old." But this use of the word is entirely discarded. Which however represents persons, when a question is asked or discrimination intended; as which of the men was it; I know not which person it was.

Who, is sometimes used as the substitute for things, but most unwarrantably: "The countries who"—Dave-

ment on Rev. 2. 13. "The towns, who—Hume Contin. 11. ch. 10. "The faction or party who"—Equally faulty is the use of who and whom for brutes "the birds who"—

The use of *it* for a sentence, seems to have given rise to a very vague application of the word in phrases like this: How shall I contrive *it* to attend court? How fares *it* with you? But such phrases, whatever may have given rise to them, are used chiefly in familiar colloquial language, and are deemed inelegant in any other style.

A more justifiable use of it is seen in this sentence: "But it is not this real essence that distinguishes them into species; it is men who range them into sorts," &c. Locke. 3. 6. 36.

Here it is in the singular, though referring to men in the plural. The cause or origin of this, in our language as in others, may perhaps be found in the disposition of the mind to combine the particular agents employed in performing an act, into a single agent. The unity of the act or effect seems to predominate in idea, and control the grammatical construction of the substitute.

RULE XI.

In compound sentences, a single substitute, who, which or that, employed to introduce a new clause, is the nominative to the verb or verbs belonging to that clause, and to others connected with it; as "The thirst after curiosities, which often draws contempt." Rambler. No. 83. "He who suffers not his faculties to lie torpid, has a chance of doing good." *ibm.* "They that are after the flesh, do mind the things of the flesh." Rom. 8. 5. "Among those who are the most richly endowed by nature, and [are] accomplished by their own industry, how few are there whose virtues are not obscured by the ignorance, prejudice or envy of their beholders." Spect. No. 255.

In a few instances, the substitute for a sentence or a clause, is introduced as the nominative to a verb, before the sentence or clause, which it represents; as, "There was therefore, which is all that we assert, a course of life pursued by them, different from that which they before

Digitized by Google

led." Paley Evid. ch. 1. Here which is the representative of the whole of the last part of the sentence, and its natural position is after that clause.

The substitute what combines in itself the offices of two substitutes, which, if expressed, would be the nominatives to two verbs, each in distinct subsequent clauses; as "Add to this, what, from its antiquity is but little known, has the recommendation of novelty." Hermes. pref. 19. Here what stands for that, which—and the two following verbs have no other nominative.

This use of what is not very common. But what is very frequently used as the representative of two cases ---one, the objective after a verb or preposition, and the other, the nominative to a subsequent verb. Examples:

"I heard what was said." "He related what was seen.

"We do not so constantly love what has done us good." Locke 2. 20. 14.

"Agreeable to what was afterwards directed." Bl. Com. b. 2. ch. 3.

"Agreeable to what hath been mentioned." Prideaux, p. 2, 6, 3.

"There is something so averruling in whatever inspires us with awe." Burke on the Sublime, 304. In these sentences what includes an object after a verb or preposition, and a nominative to the following verb. "I have heard that, which was said."

RULE XII.

When a new clause is introduced into a sentence, with two pronouns, or with one pronoun and a name, one of them is the nominative to the verb, and the other is governed by the verb or a preposition in the objective case, or by a noun in the possessive ; as "Locke, whom there is no reason to suspect of favoring idleness, has advanced" *---Ramb.* 89. Here reason is the nominative to is, and whom is governed by suspect.

"Take thy only son Isaac, whom thos lovest." Gen. 22. Here are two substitutes, one the nominative to the verb, and the other governed by it in the objective.

"God is the sovereign of the universe, whose majesty ought to fill us with awe, to whom we owe all possible reverence, and whom we are bound to obey."

It is not unusual to see in periods, a third clause introduced within a second, as a second is within the first, each with a distinct substitute for a nominative; as, "Those modifications of any simple idea, which, as has been said, I call simple modes, are distinct ideas."

Locke 2, 13.

Involution to this extent may be used with caution, without embarrassing a period; but beyond this, if ever used, it can hardly fail to occasion obscurity. Indeed the third member included in a second, must be very short, or it will perplex the reader.

Substitutes are sometimes made to precede their principals: thus, "When a man declares in autumn, when he is eating *them*, or in spring when there are *none*, that he loves grapes." Locke 2, 20. But this arrangement is usually awkward and seldom allowable.

RULE XIII.

When there are antecedents in different persons, to which a nominative substitute refers, the substitute and verb following may agree with either, though usage may sometimes offer a preference; as "I am the Lord that make all things; that stretch forth the heavens alone; that spread abroad the earth," &c. Isa. 44. Here I and Lord are of different persons, and that may agree with either—If it agrees with I, the verbs must be in the first person; "I am the Lord that make." If that agrees with Lord in the third person, the verb must be in the third person; "I am the Lord that maketh." But in all cases, the following verbs should all be of the same person.

RULE XIV.

The definitive adjectives, this and that, the only attributes which are varied to express number, must agree in number with the names to which they refer; as this city, that church; these cities, those churches.

This and that are often used as substitutes for a name in the singular number, which is omitted; but the same name in the plural immediately follows after a connective; as in this example, "The mortality produced by this and other diseases"—Life of Washington, 3, 6. That is, by this disease and other diseases. The sentence may be varied thus—by this disease and others—but the first form is the most common, and it occasions no obscurity.

Other adjectives and participles, used as adjectives, are joined to the names which they qualify without inflection; as, a wise man, wise men; an amiable child, or amiable children; a received truth, or received truths; a shining character, or shining characters.

Attributes are often used as substitutes for the names of men and things which they describe by their qualities; as, few were present; the wise are respected; the bravest are not always victorious.

In this character, attributes take the plural form, and are qualified by other attributes; as the goods of fortune, two finites or infinites, universals, generals—the chief good, a happy few; "the extraordinary great"—Burke on the Sublime, 304. "The blue profound." Akenside.

When nouns are joined by a copulative, an adjective preceding the first, is applied to the others without being repeated; as, "From great luxury and licentiousness" —here great belongs to licentiousness as well as to luxury. "Converted to strict sobriety and frugality of manners." Enfield.

When a period of time is described by its component parts or portions, specified by plural names, an attribute in the singular number, or denoting unity, may be joined to the plural names of the parts; as, "I have not been to London *this five years;*" "an election regularly takes

æ

137

place overy seven years;" that is, in every single period or term of seven years.

This idiom is explainable on very natural principles. The whole portion of time has no name, and we are therefore obliged to express our idea of it by something equivalent, which, in this instance, are the parts five and seven years. The mind is fixed upon the entire period, and while the lips utter the name of the parts, the mind naturally considers the whole as a unity, and overlooking the several portions, attaches the attribute to that unity or whole period. Hence originated the customary abbreviation of twelve months, into a twelvemonth; seven nights into se'night; fourteen nights into a fortnight; and hence dozen, hundred, &c. admit the definitive a.

To the same cause probably may be ascribed the common phrases, twenty pound, thirty foot, and others similar; in which a whole quantity or space, for which we have no appropriate name, is described by smaller portions equivalent. The idea of unity, in all such cases, being predominant, and the only one which the speaker wishes to communicate, is very apt to control the language, and occasion the omission of the sign of the plural even when it is necessary to the very purpose intended.

Hence we learn the cause why enumeration and addition of numbers are usually expressed in the singular number; two and two is four; seven and nine is sixteen; that is, the sum of seven and nine is sixteen. This is correct upon principle; for the affirmation respects the total amount or result, which in idea is always a unity. These idioms, instead of being violations of grammatical rules, as our critics would make us believe, are wonderful proofs either of ingenuity in the framers of language, or more probably, of an irresistible propensity in men, independent of reasoning, to accommodate words to ideas, and to express their ideas with the utmost brevity as well as force.

12*

Digitized by Google

RULE XV.

Adjectives are usually placed before the nouns to which they belong; as, a wise prince; an obedient subject; a pious clergyman, a brave soldier.

Exception 1. When some word or words are dependent on an attribute, it follows the name; as, "knowledge requisite for a statesman; furniture convenient for a family.

Exception 2. When an attribute becomes a title, or is emphatically applied to a name, it follows it; as Charles, the Great; Henry, the First; Lewis, the Gross; Wisdom incomprehensible.

Exception 3. Several attributes belonging to the same name, may precede or follow the name to which they belong; as a learned, wise and martial prince, or a prince learned, wise and martial.

Exception 4. The verb be often separates the name from its attribute; as, war is expensive; gaming is ruinous.

Exception 5. An emphatical attribute is often used to introduce a sentence, in which case it precedes the name which it qualifies, and sometimes at a considerable distance; as, "Great is the Lord;" auspicious will be that event; fortunate is that young man who escapes the snares of vice.

Exception 6. The attribute all may be separated from its noun by the, which never precedes it in construction; as, "all the nations of Europe." Such and many are separated from names by a; as "such a character is rare;" "many a time."

All adjectives are separated from names by a when preceded by so and as—so rich a dress—as splendid a retinue; and they are separated by a or the, when preceded by how and however; as "how distinguished an

act of bravery"----" how brilliant the prize." "However just the complaint."

The word soever may be interposed between the attribute and the name; "how clear soever this idea of infinity"—" how remote soever it may seem." Locke.

Double is separated from its noun by the; as "double the distance"—the in such cases, never preceding double. But a precedes double, as well as other attributes.

All and singular or every precede the before the name in these phrases. "All and singular the articles, clauses and conditions." "All and every of the articles"—phrases of the law style.

RULE XVI.

Adjectives belong to verbs in the infinitive mode; as "to see is pleasant"—"to ride is more agreeable than to walk;" "to calumniate is detestable."

Sometimes the attribute belongs to the infinitive in union with another attribute or a name; as "to be blind is unfortunate;" "to be a coward is disgraceful." Here the attribute unfortunate is the attributive of the first change, to be blind, &c.

RULE XVII.

Adjectives belong to sentences, or whole propositions: Examples:

"Agreeable to this, we read of names being blotted out of God's book." Burder's Oriental Customs, 375.

What is agreeable to this? The answer is found in the whole of the last clause of the sentence.

"Antiochus—to verify the character prophetically given of him by Daniel, acted the part of a vile and most detestable person, agreeable to what hath been aforementioned of him." Prideaux, part 2, b. 3.

Ē

"Suitable to this, we find that men, speaking of mixed modes, seldom imagine, &c. Locke, 3, 5, 11.

"No such original convention of the people was ever actually held, antecedent to the existence of civil government in that country." Pal. Phil. b. 6, ch. 3.

NOTE—Writers and critics, misapprehending the true construction of these and similar sentences, have supposed the attribute to belong to the verb, denoting the manner of action. But a little attention to the sense of such passages will be sufficient to detect the mistake. For instance, in the example from Enfield, the attribute contrary cannot qualify the verb adopted; for the conquerors did not adopt the opinions of the conquered in a manner contrary to what usually happens—the manner of the act is not the thing affirmed, nor does it come into consideration. The sense is this, the fact, that the conquerors adopted the opinions and manners of the conquered, was contrary to what commonly happens in like cases. The attribute belongs to the whole sentence or proposition. The same explanation is applicable to every similar sentence.

In consequence of not attending to this construction, our hypersritics, who are very apt to distrust popular practice, and substitute their own rules for customary idioms founded on common sense, have condemned this use of the attribute, and authors, suffering themselves to be led astray by these rules, often use an adverb in the place of an adjective.

"The greater part of philosophers have acknowledged the excellence of this government, which they have considered, some relatively to society, and others as it has relation to the general system of nature." Anorch. ch, 62.

"The perceptions are exalted into a source of exquisite pleasure independently of every particular relation of interest."

Studies of Nature, 12.

Digitized by Google

In the first of these examples, relatively is used very awkwardly, for as relative, or as relating, or as it relates, or in relation; for the word has a direct reference to government.

In the second example, independently is used as if it had been intended to modify the verb exalt—the perceptions are independently exalted. But the manner of exalting is not the thing described. It is not that the perceptions are exalted in an independent manner, not in a manner independent of a relation to interest : but the fact, that the perceptions are exalted into a source of exquisite pleasure, is independent of every relation of interest. Equally faulty is the following sentence :

Agreeably to this law, children are bound to support their parents." Paley. Phil.

In this kind of phrase, I have even seen an instance of the participle according converted into accordingly. See this word explained in the sequel. I have not seen priorly used for prior, in like sent tences—" Priorly to his arrival in England"—Nor anterierly, posteriorly, exteriorly, inferiorly, nor adjacently, or contiguously to the river; and the like barbarisms; but subsequently, antecedently, conestently, conformably, are frequent, in our best authors. "To do what we will, consistently with the interests of the community, is civil liberty." Paley. Phil. 6.5. This is not English; for it is not the manner of doing, but the Mang done, which must be consistent with the public interest. A misapprehension of the true import and construction of such passages, has done immense mischief to the language.

RULE XVIII.

Adjectives are used to modify the action of verbs, and to express the qualities of things in connexion with the action by which they are produced. Examples :

"Open thine hand wide." Deut. 15. 17.

We observe in this passage, that wide, the attribute of hand, has a connexion with the verb open; for it is not "open thy wide hand;" but the attribute is supposed to be the effect of the act of opening. Nor can the medifier, widely be used; for it is not simply the manner of the act which is intended; but the effect.

^{*} The idiom in question has resulted from that disposition to abridge the number of words used in communicating ideas, which I have repeatedly mentioned; the effects of which are among the prime excellencies of every language.

"Let us write slow and exact." Guthrie. Quinctillian. 2. 375.

We might perhaps substitute *slowly* for slow, as describing only the, manner of writing; but *exactly* cannot be substituted for *exact*; for this word is intended to denote the *effect* of writing, in the correctness of what is written. The attribute expresses the idea with a happy precision and brevity.

As this is one of the most common, as well as most beautiful idioms of our language, which has hitherto escaped due observation, the following authorities are subjoined to illustrate and justify the rule.

"We could hear distinctly the bells-which sounded sweetly soft and pensive." Chandler's Travels. ch. 2.

"A southernly wind succeeded blowing fresh." ibm. vol. 2. 3.

" His provisions were grown very short. Burchet's Nav. Hist. 357.

"When the Caloric exists ready combined with the water of solution," Lavoisier. Trans. ch. 5.

"The pureit clay is that which burns white." Encyc. art. Chemistry.

" Bray, to pound or grind small." Johnson's Dict.

"When death lays waste thy house." Beattie's Mins.

"All which looks very little like the steady hand of nature." Pal. Phil. ch. 5.

"Magnesia feels smooth; calcareous earths feel dry; lithomarga feels very greasy or at least smooth; yet some feel dry and dusty," Kirwan. vol. 1. 12. 189.

"By this substance, crystals and glasses are colored blue." Chaptal. Trans. 299.

A PHILOSOPHICAL AND

"There is an apple described in Bradley's work, which is said to have one side of it a sweet fruit, which boils soft; and the other side, a sour fruit which boils hard." Darwin Phytol. 105.

"Drink deep or taste not the Pierian spring." Pope.

"Heaven opened wide her ever during gates." Milton. P. L. 7.

"The victory of the ministry cost them dear." Hume Contin. 11. 9.

"And just as short of reason he must fall." Pope.

" Thick and more thick the steely circle grows." Hoole's Tasso. b. 8.

"Ancus marched strait to Fidenæ." Hook. Rom. Hist. 1.6.

"The cakes, eat short and crisp."

Vicar of Wakefield.

"A steep ascent of steps which were cut close and deep into the rocks." Hampton's Polybius. 2. 265.

"It makes the plow go deep or shallow."

Encyc. art. agriculture.

"The king's ships were getting ready." Lusiad. 1.91.

"After growing old in attendance." Spect. No. 282.

"The sun shineth watery." Bacon. Apoph.

"Soft sighed the flute." Thomson. Spring.

" I made him just and right." Milton. 3. 98.

"He drew not nigh unheard." ibm. 645.

"When the vowel of the preceding syllable is pronounced short." Murray's Grammar."

"Here grass is cut close and gravel rolled smooth. Is not that trim ? Boswell. Johnson. 3.

" Slow tolls the village clock-deep mourns the turtle." Beattie's Minstrel.

" If you would try to live independent." Pope. Let.

"He obliged the Nile to run bloody for your sakes."" Whiston's Josephus. 3. 5.

"Correct the heart and all will go right. Porteus. Lect. 3.

The poets sometimes use attributes in this manner, when modifiers would express the idea. Sometimes they are induced to it by the measure; and not unfrequently by the obvious superiority of the attribute in expressing the idea with force and precision.

When two qualifying words are wanted, the latter may be an attribute, though applied to a verb; as "He beat time tolerably exact. Golds. An. Nat. ch. 12.

"The sir will be found diminished in weight exactly equal to what the iron has gained." Lavoisier. ch. 3.

"Horses are sold extremely dear." Golds.

"And greatly independent lived. Thom. Spring.

"This was applying a just principle very ill. Vattel. Trans. 2. 7.

It will be remarked that we have no adverbial form of the attribute in the comparative and superlative degrees, except that of *more* and *most*, *less* and *least*, prefixed. But we use the adjectives with the regular terminations, in these degrees, to qualify verbs. Examples :

"To hands that longer shall the weapon wield."

*" Cruentam etiam fluxisse aquam Albanam, quidam auotores erant." Liv. lib. 27. 11. Some authors related that the Alban river ran bloody.

"So while we taste the fragrance of the rose. Glows not her blush the fairer ?" ibm. 2. 77.

"When we know our strength, we shall the better know what to undertake with hopes of success.

Locke. 1. 6.

put

So far are the words here used from being adverbs, that they cannot be changed into adverbs, without impairing the beauty, weakening the force or destroying the meaning of the passages. Let the sentences be put to the test—Magnesia feels smoothly—the cakes eat shortly and crisply—the apples boil softly or hardly—glows not her blush the more fairly. Every English ear rejects this alteration at once—the sentences become nonsense. Nor can the attribute be separated from the verb—" Amid her smiles, her blushes, being lovelier, glow"—this is not the sense—nor will it answer to say," her lovelier blushes glow"—this is not the idea. <u>The sense is, that the at-</u> **tribute expressed** by *lovelier*, is not only a quality of *blushee*, but a quality derived, in a degree, from the action of the verb, glow.

Thus, clay burns white—objects may be seen double may rise high—fall low—grow strait, or thick, or thin, or fat, or lean—one may speak loud—the sun shines clear the finer a substance is pulverized—to grow wiser, to plunge deeper, spread wider—and similar expressions without number, constitute a well established idiom, as common as it is elegant.*

* The Roman writers availed themselves of the same idiom. "Ob multitudinem familiarum, quæ gliscebat immensum."

Tacitus. An. lib. 4. 27.

"Fabius—Arpos primum institit oppugnare—quæ maxime neglectam custodiam vidit, ea polissimum adgredi statuit."

Liv. lib. 24. 46.

Digitized by Google

How much more impressive is the description which Tacitus here gives of an alarming insurrection of slaves, than if he had used the adverb! "A multitude of slaves which was increasing and growing immense!" this is giving to prose the rhetorical sublimity of verse. It is giving the verb its full effect and at the same time, attach a; the attribute to that effect. The attributes thus connected with verbs may easily be distinguished from those which merely qualify names, the latter being separable from the verb. Thus,

"Our great enemy

All uncorruptible, would, on his throne, Sit unpolluted." Milton. P. L. 2.

Here *unpolluted* has no effect at all upon the verb; but may be separated from it, and carried into the first line without altering the sense.

"And the birds sing concealed." Thomson.

"He roved uncertain through the dusky shade." Hoole.

RULE XIX.

Some adjectives are used to modify the sense of others and of participles; as a very clear day, red hot iron, a more or most excellent character. "Without coming any nearer." Locke; more pressing necessity, most grating sound, "a closer grained wood." Lavoisier. Trans.

"Full many a gem with purest ray serene." Gray.

"Some deem'd him wondrous wise."

Beattie's Minstrel.

ł

í

t

In these expressions the last attribute belongs more immediately to the noun expressing its quality—and the *first* attribute qualifies the *second*.

Not unfrequently two attributes are used to modify a third, or the principal one; as "The manner in which

In the word *potissimum*, in Livy, as in many others, we see the effect of not understanding this elegant use of attributes. Such words are marked in Dictionsries as adverbs! How would Tully, Livy and Tacitus smile to see their native tongue, disfigured with accents to distinguish adverbs from adjectives, in a modern dictionary of the language! It is a just remark of Mr. Tooke, that all words which critics have not understood, they have thrown into the common sink of adverbs.

PRACTICAL GRAMMAR.

external force acts upon the body is very little subject to the will." Rambler, No. 78.

RULE XX.

Adjectives are used to qualify the sense of adverbs; as a city was very bravely defended; the soldiers were most amply rewarded; a donation more beneficially bestowed; a house less elegantly furnished; a man the least peaceably disposed.

In these phrases, the modifier attends the verb or participle to mark the *manner* or *character* of the act or affirmation; and the attribute attends the modifier to mark the degree or extent of that manner of character.

For a like purpose of defining the degrees of quality and modification, we make great use of much before attributes of the comparative and superlative degrees; as a prince much more humanely disposed; or much less martially inclined.

We have a few other words which are often used to modify attributes as well as verbs—as a *little*, a great deal, a trifle. "Many letters from persons of the best sense do not a *little* encourage me." Spectator. 124. "It is a great deal better;" a trifle stronger; the last of which expressions is colloquial.

RULE XXI.

The adjectives each, every, either and neither, have verbs and substitutes agreeing with them in the singular number; as

" Each one was a head of the house of his fathers." Josh. 22. 14.

" Every one that findeth me, shall slay me."

Gen. 4. 14.

"And take every man his censer." Num. 16. 17.

"Nadab and Abihu took either of them his censer."

Lev. 10. 1.

Digitized by Google

12*

"Neither of the ways of separation, real or mental, is compatible to pure space." Locke. 2. 13.

Errors. "Let each esteem others better than themselves." It ought to be himself.

"There are bodies, each of which are so small." It ought to be is. Locke. 2. 8.

NOTE.—A plural verb, which affirms something of a number of particulars, is often followed by a distributive which assigns the affirmation to the particular objects or individuals. Thus "if metals have, each a peculiar earth"—Hence we may consider each as the nominative to has understood—"If metals have, if each metal has a peculiar earth." There is no other way of resolving the phrase. This manner of expression is common, though quite useless—as the last clause, "if each metal has"—is sufficient. It has Bot the merit of an abbreviation. This phrase, "Let us love one abother," is of a similar construction, but it is not easy to find a substitutute of equal brevity.

RULE XXII.

Names of measure or dimension stand without a governing word, followed by an adjective; as, "a wall seven feet high and two feet thick"—a carpet six yards wide"— "a line sixty fathoms long"—"a kingdom five hundred miles square"—" water ten feet deep."

"An army forty thousand strong," is a similar phrase.

Note.—Double comparatives and superlatives, most straitest, wost highest, being improper and useless, are not to be used. The few which were formerly used are obsolete. Worser, a mistake in spelling wyrsa, is obsolete; but lesser, a mistake for lessa, is still used, as well as its abbreviation, less.

The superlative form of certain attributes, which in the positive degree, contain the utmost degree of the quality as *extremest*, *chiefest*, is improper and obsolete. But authors indulge in a most unwarrantable license of annexing comparison to attributes whose megative sense precludes increase or dimunition; as in these sentences, "These are more formidable and more impassable than the mountains." Golds. An. Nat. ch. 2. "This difficulty was rendered still more incomprehensible." "The contradictions of impiety are still more incomprehensible." Massilton. Sern. to the Great.

151

Similar to these are numerous expressions found in good authors --more impossible, more indespensable, less universal, more uncontrollable; and others, in which the sign of comparison is not only improper, but rather enfeebles the epithet; for the word itself expressing the full extent of the idea, ought to bear some emphasis, which, if a qualifying word is prefixed, will naturally be transferred to that word.*

In a few instances, this usage seems to be too well established to be altered, and particularly in the use of more and most, less and least perfect. In general, it would indicate more precision of thought to apply a term of diminution to the affirmative attribute—less possible, less surmountable, less controllable; rather than a term of inerease to a negative attribute.

NOTE 2.—In English, two names are frequently united to form a new name; as earth-worm, drill-plow, ink-stand, book-case. In some cases, these compounds are by custom effectually blended into one term; in other cases, they are separated into their component parts by a hyphen—In other cases, words are united, and the first term forms a sort of occasional attribute to the second; as familyuse or family-consumption.

NOTE 3.—From a disposition to abridge the number of words in discourse, we find many expressions which are not reducible to any precise rule, formed at first by accident or ellipsis—Such are at first, at last, at best, at worst, at most, at least, at farthest, at the utmost. In these expressions there may have been an ellipsis of some name; but they are well established, brief and significant, and may be numbered among the pinnons of mercury.

Nors 4.—We have certain attributes which follow a verb and a name to which they belong, but never precede the noun. Such are adry, afeared, afraid, alone, alike, aware, akin, alive, aleep, sworke, athirst, aloft, aghast, afloat, astew, ashamed, pursuant, plenty, worth; to which may be added amiss, aground, ashore, aside, and a few others which may be used as attributes or modifiers. We say, one is adry, ashamed, alive or awake. But never an adry person, an ashamed child, &c. We say, "A proclamation was issued pursuant to advice of council." But we can in no case place pursuant before a noun.

* This effect may proceed also from another consideration. If the attribute alone is used, its sense precludes the idea of increase or diminution—it expresses all that can be expressed. But admit comparison, and it ceases to express the utmost extent of the qtality.

¥

Plenty, as an attribute, has not yet been recognized by critics : but critics do not make language, nor can they reject what a nation has made. *Plenty* is constantly used as an adjective after a name in colloquial language, and is found in our best writers; to cavil at this usage therefore, is as idle as it is impertinent.

"The sea muscle is perhaps the most plenty."

Gold's. An. Nature.

1

"Where shrubs are plenty and water scarce." Ibm. 2. 21.

"In those provinces where wood was plenty."

Ryeaut Garcillasso. 923.

"This species is more plenty in France." Encycl. art. Loxia.

"Provisions are plenty and living cheap." Ibm. art. Adrianople.

Worth not only follows the name which it qualifies, but is followed by a name denoting price or value; as a book worth a dollar or a guinca—it is well worth the money—"It is worth observation."— Beloe's Herodotus. Erato. 98. If a substitute is used after worth, it must be in the objective case. It is worth them or it.

But worthy, the derivative of worth, follows the usual construction of attributes, and may precede the name it qualifies; as, a worthy man.

Regimen or Government.

RULE XXIII.

One name signifying the same thing with another, or descriptive of it, may be in apposition to it; that is, may stand in a like character or case, without an intervening verb; as, Paul, the apostle; John, the baptist; Newton, the philosopher; Chatham, the orator and statesman.

NOTE 1.—In the following sentence, a name in the plural stands in apposition to two names in the singular, joined by an alternative. "The terms of our law will hardly find words that answer them in the Spanish or Italian, no scanty languages." Locke 3. 5. 8.

NOTE 2.—Names are not unfrequently set in apposition to sentences, as "Whereby if a man had a positive idea of infinite, either duration or space, he could add two infinites together; nay, make one infinite infinitely bigger than another; *absurdities* too gross to be confuted." Locke. 2. 17. 20. Here the *absurdities* are the whole preceding propositions.

"You are too humane and considerate; things few people can be charged with." Pope Let. Here things are in apposition to humane and considerate. Such a construction may be justified, when the ideas are correct, but it is not very uncommon.

"The Dutch were formerly in possession of the coasting trade and freight of almost all other trading nations; they were also the bankers for all Europe; *advantages* by which they have gained immense sums." Zimmerman's Survey, 170. Here advantages is put in apposition to the two first members of the sentence."

RULE XXIV.

When two names are used, one denoting the possessor, the other the thing possessed, the name of the possessor precedes the other in the possessive case; as, "In my *Father's house* are many mansions." Men's bravery; England's fleet; a Christian's hope; Washington's prudence.

NOTE 1.—When the thing possessed is obvious, it is usual to omit the name; as, "Let us go to St. Paul's," that is, church; "He is at the President's ;" that is, house.

"Nor think a lover's are but fancied woes." Couper.

That is a lover's woes. "Whose book is this? William's."

NOTE 2.—When the possessor is described by two or more names, the sign of the possessive is generally annexed to the last; as, "Edward, the second of England's Queen." Bacon on Empire.

"In Edward the third's time." Black. Com. b. 1. ch. 2.

"John the Baptist's head." Matt.

"A member of parliament's paying court to his constituents." Burke.

But if the thing possessed is represented as belonging to a number severally specified, the sign of the possessive is repeated with each; as "He has the surgeon's and the physician's advice." It was my father's, mother's, and uncle's opinion.""

* The contrary rule in Murray is egregiously wrong; as exemplified in this phrase, "This was my father, mother and uncle's advice"—This is not English. When we say, "the king of England's

NOTE 3.—When of is used before the possessive case of nouns, there is a double possessive, the thing possessed not being repeated; as "Vital air was a discovery of *Priestley's*." "Combustion, as now understood, was a discovery of Lavoisier's." The sense of which is, that vital air was one of the discoveries of Priestly. This idiom prevents the repetition of the same word.

NOTE 4.—The possessive may be supplied by of, before the name of the possessor; as "the hope of a christian." But of does not always denote possession; it denotes also consisting of, or in, concerning, &c. and in these cases, its place cannot be supplied by the possessive case. Thus cloth of wool, cannot be converted into wool's cloth; nor a cup of water, into water's cup; nor an idea of an angel, into an angel's idea; nor the house of Lords, into the Lord's house.

RULE XXV.

Participles are often used for nouns, and have the like effect in governing them in the possessive case; as "A courier arrived from Madrid, with an account of his Catholic majesty's having agreed to the neutrality." "In case of his Catholic majesty's dying without issue." "Averse to the nation's involving itself in another war." Hume, Cont. vol. 7. b. 2. ch. 1. "Who can have no notion of the same person's possessing different accomplishments," Spect. No. 150.

This is the true idiom of the language; yet the omission of the sign of the possessive is a common fault among modern writers, who learn the language by grammar, and neglect usages which are much better authority, and the basis of correct grammar. "Pieces of iron arranged in such a way as seemed most favorable for the combustion being communicated to every part." Lavosier. Trans.

"There is no reason for hydrogene being an exception." *ibm.* These expressions are not English.

throne," the three words, king of England, are one name in effect, and can have but one sign of the possessive. But when two or three distinct names are used, the article possessed is described as belonging to each. "It was my father's advice, my mother's advice, and my uncle's advice." We can omit *advice* after the two first, but by no means, the sign of the possessive.

PRACTICAL GRAMMAR.

RULE XXVI.

Transitive verbs and their participles require the objective case or the object of action to follow them; as "In the beginning, God created the heaven and the earth."

"If ye love me, keep my commandments." "O righteous father, the world hath not known thee."

Sometimes the object and often the objective case of substitutes precedes the governing verb; as "The spirit of truth, whom the world cannot receive." "Whom ye ignorantly worship, him declare I unto you."

Whom and which, when in the objective case, always precede the verb.

In verse, a greater license of transposition is used, than in prose, and names are often placed before the governing verb.

"But through the heart

Should jealousy its venom once diffuse." Thomson.

"She with extended arms his aid implores." ibm.

A name with whatever, whatsoever or whichever, preceding, is placed before the governing verb; as "whatsoever positive ideas we have." Locke 2. 17.

Note 1.—We have some verbs which govern two words in the objective case; as,

"Did I request thee, maker, from my clay To mould me man?" Millon, 10:744.

"God seems to have made him what he was."

Life of Couper.

"Ask him his opinion ;" "You have asked me the news."

Will it be said that the latter phrases are elliptical, for "ask of him his opinion?" I apprehend this to be a mistake. According to the true idea of the government of a transitive verb, him must be the object in the phrase under consideration, as much as in this, "Ask him for a guinea;" or in this, "ask him to go."

NOTE 2.—Some verbs were formerly used as transitive, which are no longer considered as such; as "he repeated him?"—"fiee thee away?"—"he was swerved?"—"the sum was amounted," &c. which are held improper.

Cease however, is used as a transitive verb by our best writers-"Cease this impious rage." Millon. "Her lips their music cease." Tasso. by Hoole.

RULE XXVII.

Intransitive verbs are followed by the name of the act or effect, which the verb expresses in action; as "To live a life of virtue;" "To die the death of the righteous;" "to dream dreams;" "to run a race;" "to sleep the sleep of death."

We observe, in these examples, life is the name of living supposed to be complete; as race is the name of the act of running when accomplished.

Norm.—Nearly allied to this idiom is that of using, after verbs transitive or intransitive, certain nouns which are not the objects of the verb, nor of precisely the same same; but which are either the names of the result of the verb's action, or closely connected with it. Examples: "A guinea weighs five penny weight, six grains;" a orown weight nineteen penny weight; "* " a piece of cloth measures ten yards."

"And on their hinges grate harsh thunder." "And rivers run potable gold." "The crispid brook ran nectar." "Groves whose rich trees wept odorous gums and balm." "Grin a ghastly smile." *Millon.*

"Her lips blush deeper sweets." Thomson.

* The radical idea of weight is carry, bear or sustain, from the Saxon wag, a balance. The idiom in question has its original in that idea—a guinea weights five penny weights six graine—that ia, carries or sustains that weight in the scales. How much of the propriety, and even of the beauty of language is lost, by neglecting to study its primitive state and principles!

Under this rule or the following may be arranged these expressions—"Let them go their way"—"When matters have been brought this length." Lavois Translation. "We turn our eyes this way or that way." "Reckoning any way from ourselves, a yard, a mile, &c. Locke 2, 17.

Similar to this idiom are the phrases to go west or east—pointing month or south—north-west or south-east and the like, which I find to be Saxon phrases and very ancient.

In some instances verbs of this sort are followed by two objects; as "a ring cost the purchaser an eagle."

RULE XXVIII.

Names of certain portions of time and space, and especially words denoting continuance of time or progression, are used without a governing word; as "Jacob said, I will serve thee seven years for Rachel." "And dust shalt thou eat all the days of thy life." "And he abode with him the space of a month." "The tree of life yielded her fruit every month." "In those days I Daniel was mourning three full weeks." "Whosoever shall urge thee to go a mile, go with him twain." "To walk a mile, or a league."

"Effects occurring every moment to ourselves."

"You have asked me news a hundred times."

Pope.*

Words expressing particular or precise points of time, are usually preceded by a preposition; as "at that hour;" "on that day." But to both these rules there are exceptions.

The same idiom is found in the Greek and Latin languages, which were built on a Toutonic foundation—it is found in the Saxon, from which it is derived to modern English; and is therefore to be considered as original, or coeval with the language.

^{*} Lowth, followed by the whole tribe of writers on this subject, alleges some preposition to be understood before these expressions of time. But this is a palpable error, arising from preconceived notions of the necessity of such words. The fact isotherwise. All these peculiar phrases, are idiomatic; and the remains of the early state of our language.

RULE XXIX.

The verb be has the same case after it as before it; or two substitutes connected with be in construction are in the same case. "It is I, be not afraid." "Thou art she," "it is he." "Who was he?" "Who do men say that I an?" "Whom do they represent me to be." But "Whom do men say that I am," is incorrect.

RULE XXX.

Transitive verbs and their participles admit of a sentence, a clause or number of words as their object; as "He is not alarmed so far, as to consider how much nearer he approaches to his end." Rambler, No. 78.

Consider what? The whole following clause, which is the object of the verb.

"For to say, a man has a positive clear idea of any quantity, without knowing how great it is, is as unreasonable as to say, he has a positive clear idea of the number of sands on the sea shore." Locke, 2, 17, 15. Here the parts of this period in italics are the things said, the objects of the verb say. The first clause, being the object after say, forms, with the preceding words, the nominative to is—and the same clause of the period is qualified by the attribute unreasonable.—For to say all which follows is as unreasonable, §c.

"If he escapes being banished by others, I fear he will banish himself." Pope Let. to Swift.

Here being banished stands in the place of a noun, as the object after escapes.

"Whether that which we call ecstasy be not dreaming with the eyes open, I leave to be examined."

Locke 2, 19.

We cannot avoid observing their sensible qualities, nay the very substances to be in a continual flux."

Locke, 2, 19.

This rule comprehends the construction of the verbs, save, except, add, admit, allow, suppose, and many others when used to govern sentences; and in strictness, the old verbs, if, though, unless. Examples:

"Suppose then the world we live in to have had a creator"—" Suppose the disposition which dictated this council to continue." Paley Evid. 1.

"Not forgetting therefore what credit is due to the evangelical history, supposing even any one of the four gospels to be genuine. Ibm. ch. 9.

"It is good also not to try experiments in states, except the necessity be urgent, or the utility evident." Bacon on Innovation.

"They are in effect no more than standing commissions, save that they have greater authority."

Ibm. of Counsel.

Digitized by GOOGLE

"For that mortal dint,

Save he who reigns above, none can resist." Milton, 2, 815.

"I wish I could give you any good reasons for your coming hither, except that, I earnestly invite you." Pope Let.

"Lord Bathurst is too great a husbandman to like barren hills, except they are his own to improve." Pope Let. Sept. 3, 1726. "The ships of either party may freely traffick with the enemies of the other, excepting with contraband merchandize." Anderson Commerce, 3, 71.

"Suppose I was to say, light is a body. Hermes. 78.

" Except ye repent, ye shall all likewise perish." Luke 13.

"Ye cannot bear fruit, except ye abide in me." John 15.

"He that sacrificeth to any god, save to the Lord only, shall be put to death." Ex. 22, 20.

"And he could there do no mighty works, save that he laid his hand on a few sick and healed them."

Matth 6, 5.

"He that is washed, needeth not, save to wash his feet." John 13.

"Add to this their custom of plantation of colonies." Bacon.

In these and similar passages, the object of the verb is a whole proposition or statement, in a sentence or clause of a sentence. In this passage, "Except ye repent, ye shall all likewise perish," the fact excepted is affirmed in a single verb. Take away this fact "that you shall repent"—and the consequence must be, you will perish. This is one of the modes of abbreviation in language which I have so frequently mentioned, and which constitutes a principal excellence of the English.

We observe in some of the passages here cited, the pronoun *that*, after the verb. This is probably the true original construction; the substitute *that*, pointing to the whole following clause. "He could do no mighty works there, save *that*, [except that single fact which follows] he laid his hand on a few sick and healed them."

NOTE.—It may be here observed that in some of the passages cited the verb has no definitive nominative—the verbs sare, except, suppose, add, &c. are in the imperative mode; but the address is now made to any particular person or persons. And this probably has led authors to class save and except among conjunctions, prepositions or adverbs, or to consider them as used adverbially; for it has been already observed that the class of adverbs has been a sort of common sink to receive all words which authors have not been able to comprehend.

Is it not strange that suppose, add, admit, allow, and other verbs, which are constantly used in the same manner, should have hitherto escaped the same doom? In the passages above cited from Paley, suppose is used precisely in the same manner, as except and save in others. Indeed nothing but the most inexcusable negligence could have led critics to this classification of save and except - for in many passages of scripture, these very words, in the sense in which they are called conjunctions or adverbs, have an object following them, like other transitive verbs; as "Israel burned none of them, save Hasor only." Josh. 11. 13. "Ye shall not come into the land, save Called and Joshua." Num. 14. 30. "I would that all were as I am, except these bonds. Acts.

This use of verbs without a definite nominative occasions no inconvenience; for the address is not made to any particular person, but is equally applicable to any one who will apply it. See the subject further explained under rule 38. The following passage in Locke 2, 27, 2, contains another verb used in the same manner; ^{est} Could two bodies be in the same place at the same time, then those two parcels of matter must be one and the same, *take* them great or little.⁷

The error of considering save as an adverb or conjunction, has however produced a multitude of mistakes in construction, as in these passages; "Save he who reigns above." Milton. "Which no man knoweth, saving he that receiveth it." Rev. 2, 17. The nominative he cannot be reconciled to any principle of true construction. He ought to be him, the object after the verb. Except might have been used, and this word being called a preposition, would have required after it the objective case. But both words are verbs, and ought to have the same construction.

RULE XXXL

The infinitive mode follows, first, another verb or participle; as "He loves to cherish the social affections"— "be persuaded to abandon a vicious life"—"he is willing to encounter danger"—"he was proceeding to relate bis adventures."

2dly. The infinitive follows a noun; as "The next thing natural for the mind to do. Locke. "He has a mask to perform.

14*

Digitized by Google

3diy. It follows an adjective or verbal attribute; as " a question difficult to be solved." " It is delightful to contemplate the goodness of Providence." "God is worthy to be loved and trusted." "Be prepared to receive your friend."

4thly. It follows as; thus, "an object so high as to be invisible;" "a question so obscure as to perplex the understanding."

5thly. It follows than after a comparison; as "Nothing makes a man suspect much, more than to know little." Bacon on Suspicion.

6thly. It follows the preposition for, noting cause or motive; as "What went ye out for to see?" Mat. 11.

This is the true original idiom; but it is usual now to omit for; as "he went to see a reed shaken with the wind." In every phrase of this sort, for is implied in the sense; but the use of the word is vulgar.

The infinitive mode is independent, standing as a substitute for a whole phrase; as "It is not once in ten attempts that you can find the case you seek, in any law book; to say nothing of those numerous points of conduct concerning which the law professes not to prescribe."

Paley Philos. ch. 4.

RULE XXXII.

The verbs bid, make, see, hear, feel, let, with the auxiliaries, may, can, must, shall and will, and dare and need, when used as auxiliaries, are followed by the infinitive without the prefix to; as "He bids me come"—"We cannot make them understand"—"Let me see you write"—"We heard him relate the story"—"We felt the earth tremble."— "Which they let pass." Locke. "He may go, can go, must go, shall go, will go." "I dare engage; I dare say" —"He need not be anxious."

NOTE 1.-In the uses of dare and need, there are some peculiarities which deserve remark.

When dare signifies to defy or challenge, it is regular in the tenses and persons, is a transitive verb, and followed by the infinitive with the usual prefix; as "he dares me to enter the list." But when it is intransitive, denoting to have courage, it more generally drops the personal terminations, has an anomalous past tense, and is followed by the infinitive without to; in short it has the form of an suxiliary; and in the German, it is classed with the auxiliaries. Examples: "I dare engage." Pope's Works, Letter to Gay. "I dare not confess." Swift to Gay. "I dare say." Locke. "But my Lord, you dare not do either." Junius Let. 28. "Durst I venture to deliver my own sentiments." Hume. Es. 7.

In like manner, need, when a transitive verb, is regular in its inflections; as "A man needs more prudence"—"The army needed provisions."—But when intransitive, it drops the personal terminations in the present tense; is formed like an auxiliary, and followed by a verb, without the prefix to; as "Nobody need be afraid he shall not have scope enough." Locke 2, 22, 9. "I need not go any farther." Ibm. "Nor need we wonder." Ibm. "The lender need be under no fear." Anaroh. ch. 69. "There need be no difficulty." Beddoes Hygeia, 1, 27. "She need dig no more." Spectator No. 121. "A man need not be uneasy on these grounds."

Judge Chase.

í

In the use of this verb, there is another irregularity, which is peculiar, the verb being without a nominative, expressed or implied. "Whereof here needs no account." Mill. P. L. 4, 235. There is no evidence of the fact, and there needs none." This is an established use of need.

NOTE 2.—The infinitive mode has, in its sense and use, a near affinity to a noun and often has the construction of one. It is much employed to introduce sentences which are the nominatives to verhs, as well as the objects following them; as "To will is present with me, but to perform that which is good I find not." Here the first infinitive is the nominative to is, and the second begins the sentence which is the object after find.

Norz 3.—A common mistake in the use of the infinitive is, to use the perfect tense after another verb in the past time; when in fact one of the verbs in the past time would correctly express the sense; thus, "It would have been no difficult matter to have compiled a volume of such amusing precedents." Cowper to Hill, Let. 29. Here the first verb states the time past when it was not difficult to compile a volume; at that time the compilation could not be past; the verb therefore should have been to complete, which is present and always indefinite.

In the following passage, we have a like use of verbs which is correct. "A free pardon was granted to the son, who was known to have offered indignities to the body of Varus." Murphy Tacitus, 6, 1. Here the offering of indignities was a fact precedent to the time stated in the verb was known; and therefore the verb, to have offered, is well employed.

RULE XXXIII.

The infinitive signifying motive or purpose, often introduces a clause or sentence which is not the nominative or objective to any verb; as "To see how far this reaches, and what are the causes of wrong judgment, we must remember that things are judged good or bad in a double sense." Locke 2, 21, 61. "To prevent property from being too unequally distributed, no person should be allowed to dispose of his possessions to the prejudice of his lawful heirs." Anarch. ch. 62.

NOTE.—This form of sentence seems to be derived from the use of for before the verb, for to see. The modern practice is to prefix some noun; as in order to see, or "With a view to prevent.

RULE XXXIV.

In the use of the passive verb, there is often an inversion of the order of the subject and object; thus, "The bishops and abbots were allowed their seats in the house of Lords." Blacks. Com. b. 1, ch. 2.

Here the true construction would be, "Seats in the house of Lords were allowed to the bishops and abbots."

"Theresa was forbid the presence of the emperor." Murphy's Tacitus, 2, 540. Note.—This is a common phrase. It may be resolved thus: The presence of the emperor was forbid to Theresa—or, Theresa was forbid to approach the presence of the Emperor.

" I was this day shown a new potatoe."

1.79

Darwin Phytol. Sect. 18.

"He was shown that very story in one of his own books." Guth. Quinc. 1. 42.

This idiom is outrageously anomalous; but perhaps incorrigible.

RULE XXXV.

The participle of the present tense without a definitive a or the, or with any possessive attribute, usually retains the sense of its verb, and has the objective case after it; as "The clerk is engrossing the bill." "The love we bear our friends is generally caused by our finding the same dispositions in them, which we feel in ourselves. Pope's Letters.

"In return to your inviting me to your forest." ibm.

But when the participle is preceded by a or the, it takes the character and government of a noun, and in most cases, must be followed by of; as "The middle station of life seems to be most advantageously situated for the gaining of wisdom. Poverty turns our thoughts too much upon the supplying of our wants, and riches, upon enjoying our superfluities." Spectator No. 464.

In many cases this participle becomes a noun, without a or the; as "It is more properly talking upon paper, than writing." Pope. Let.

NOTE.—The foregoing rule is often violated by our best writers, and to make it universal is to assume an authority much too dictatorial. "Some were employed in blowing of glass; others in weaving of linen." Gibbon. Rom. Emp. ch. 10.

"When the hindering any action." Locke 2. 21.

In these two examples the rule is disregarded to the prejudice of the language. But let us attend to the following—"The altributing to faculties that which belonged not to them"—Locke 2. 21. Here the participle, preceded by the cannot be followed by of, nor does it perform the office of a noun, but it retains the nature and government of a verb. "The not making a will is a culpable omission." Paley. Phil. ch. 23. These expressions are perfectly good English.

A PHILOSOPHICAL AND

١

ł

ļ

RULE XXXVI.

Participles of the present tense, either single or in union with the participle of the perfect tense, often perform, at once, the office of a verb and a noun; as "The taking from another what is his, without his knowledge or allowance, is called stealing." Locke. 2. 28. 16.

"By the mind's changing the object to which it compares any thing." Locke. 2. 25.

"To save them from other *people's damning them.*" Wycherly to Pope.

"Such a plan is not capable of being carried into execution." Anarch. ch. 62.

"They could not avoid submitting to this influence." Boling. on Hist. Let. 8.

"Suppose a Christian, Platonist or Pythagorean, should, upon God's having ended all his works, think his soul has existed ever since." Locke. 2. 27. 14.

"Taking a madman's sword to prevent his doing mischief." ibm. 1. 2. 20.

"He was displeased with the king's having disposed of the office, or with his having bestowed it upon a worthless man." Henry. Hist. Brit. b. 3.

"Its excesses may be restrained, without destroying its existence." Blacks. Com. b. 1. ch. 2.

"Supposing it had a right to meet, without being called together." ibm.

"He was near losing his life."

Dobson's Life of Petrarch. 1. 29.

"The advising or attempting to procure any insurrection." Judge Chase. Norze 1.—The participle in ing, though strictly active in its signification, is not unfrequently used by modern authors in a passive sense; as "More living particles are produced—than are necessary for nutrition or for the restoration of decomposing organs;" that is, organs suffering decomposition. Dervin. Zoon. sect. 39. 9. "From which Caloric is disengaging?"—that is, undergoing the process of separation. Lavoisier. Translation. "The number is sugmenting daily," ibm. "They seemed to think Cesar was slaging before their eyes rather than that he was slain." Guth. Quin. 2. 18. "The nation had cried out loudly against the crime while it was committing." Boling. on Hist. Let. 8. "My lives are re-printing." Johns. to Benned. 1782.

Many of this kind of participles have become mere attributes; as "Writing paper; looking glass; spelling or pronouncing dictionary." Wanting and owing have long had the character of passive participles—with the sense of wanted, owed.

Note 2.—The use of two participles in the place of a noun is one of the most frequent practices of our best writers; as "This did not prevent John's being acknowledged and solemnly inaugurated Duka of Normandy." Henry. Hist. Brit. b. 3. The participle being with an attribute, supplies the place of a noun also. "As to the difference of being margemenal, that makes this maxim more remote from being innate." Locke. 1. 2. 20.

RULE XXXVII.

Participles, like attributes, agree with a sentence, a part of a sentence or a substitute for a sentence; as "Concerning relation in general, these things may be considered." Locke. 2. 25.

Here concerning relates to the whole of the last clause of the sentence—"These things may be considered"—all which is concerning relation in general.

"This criterion will be different, according to the nature of the object which the mind contemplates."

Enfield. Hist. Ph. 2. 15.

Digitized by Google

That is, the difference of criterion will accord with the nature of the object.

"According to Hierocles, Ammonius was induced to execute the plan of a distinct eclectic school," &c.

ibm. p. 63.

Here the whole statement of facts in the last clause was according to Hierocles; that is, it accorded with his testimony.

"I have accepted thee, concerning this thing also." Gen. 19.

"I speak concerning Christ and the Church." Eph. 5. 32.

"Thus shalt thou do unto the Levites, touching their charge." Num. 8. 26.

"And touching the house of the king of Judah, say, Hear ye the word of the Lord." Jer. 21. 10.

"Now as touching things offered unto idols, we know that we all have knowledge." 1 Cor. 8. 1.

In general as is used in scripture before touching, and the construction is, "Now, as, or that which follows is touching things offered to idols." Since the translation of the bible, this word touching, in this sense, has been obsolescent, and respecting has taken its place.

"He finds the ideas he has in his mind to agree or disagree, according as the words standing for them are affirmed or denied one of another in the proposition."

Locke. 1. 2. 23.

Norz.—The use of participles explained under this rule, coincides with that of attributes as explained under rule 17.

RULE XXXVIII.

Participles often stand without a name, sentence or substitute on which they immediately depend, being referable to either of the persons indefinitely: as "It is not

possible to act otherwise, considering the weakness of our **nature**." Spectator.

Norz 1.—Johnson, in his Dictionary, calls this a kind of conjunction, and adds—"It had been more grammatically written considered, vu French, but considering is always used."

This criticism indicates an incorrect view of the subject. Considered, cannot be used without a charge in the structure of the sentence—"The weakness of our nature being considered." But to make this form of expression correspondent to the other clause, that ought also to be varied, and a definite person introduced, thus —"It does not appear (to us) possible to act otherwise, the weakness of our nature being considered." But this amendment would be of no advantage.

To comprehend the use of such expressions, we should consider that men find it useful to deal in abstract propositions and lay down truths without reference to persons. This manner of discoursing is often less invidious than to apply propositions or opinions to persons. To accomplish this purpose, men have devised words and modes of speech which enable them thus to communicate their ideas. In the passage cited, the first clause contains a general abstract proposition. equally applicable to any person-"It is not possible to act otherwise." That is, it is not possible for me, for you, for him or for her-but it might be invidious to specify persons. It is not possible for John or Thomas to act otherwise, he considering the weakness of his nature. Hence the proposition is left without applicationand it follows naturally that the persons who are to consider the cause, the weakness of our nature, should be left indefinite, or unas-Hence considering is left without a direct application certained. to any person.

Whatever foundation there may be for this explanation, the idiom is common and well authorized.

"Generally speaking, the heir at law is not bound by the intention of the testator." Paley. Phil. 23.

"Supposing that electricity is actually a substance, and taking it for granted that it is different from caloric, does it not in all probability contain caloric, as well as all other bodies?"

Thomson. Chem. art. Caloric.

Here is no noun expressed or implied, to which supposing and taking can be referred; we would be most naturally understood—

"Supposing the first stratum of particles to remain in their place, after their union with caloric, we can conceive an affinity, &c." ibm. Here supposing may be referred to we, but is this the real construction?

"For supposing parliament had a right to meet spontaneously, without being called together, it would be impossible to conceive that all the members would agree," &c. Blacks. Com. B. 1. 2.

"The articles of this charge, considering by whom it was brought, were not of so high a nature as might have been expected." Henry. Brit. B. 4. ch. 1.

"It is most reasonable to conclude that, excepting the assistance he may be supposed to have derived from his countrymen, his plan of civilization was the product of his own abilities."

Enfield H. Ph. 1. ch. 9. -

"None of us put off our clothes, saving that every one put them off for washing." Neh. 4. 23.

"And he said unto them, hinder me not, seeing the Lord hath prospered my way." Gen. 24.56.

"Lie not one to another, seeing that ye have put off the old man with his deeds." Col. 3. 9.

"Comparing two men, in reference to a common parent, it is easy to frame the ideas of brothers." Locke 2. 25.

"Granting this to be true, it would help us in the species of things no farther than the tribes of animals and vegetables."

Locke 3. 6. 23.

Bating for abating, in a like construction, is found in old authors, but now obsolete. Admitting, allowing, and some others are frequent in a like construction.

The substitute, which, in most of these phrases, might be most conveniently supplied, is we, as the writer may be considered as addressing himself to his readers, and including them with himself.

It will be readily observed how nearly this idiom is allied to the independent clause; for by a trifling change, these sentences may be resolved into that case. "Two men being compared in reference to a common parent, it is easy [for us, you or him] to frame the ideas of brothers."—"Hinder me not, since (seeing) the Lord hath prospered my way."

RULE XXXIX.

Adverbs or Modifiers are usually placed near the words whose signification they are intended to affect.

First. They are placed before attributes: as truly wise; sincerely upright; unaffectedly polite.

Secondly. They usually follow a verb when single; as he spake *eloquently*; and if a verb is transitive with an object following, the modifier follows the object; as "John received the present gratefully."

To this rule, the exceptions are very numerous, and not to be classed under general heads. "So it frequently happens;" "men often deceive themselves"—Indeed, in many cases the position of the modifier makes no difference in the sense, and may be regulated entirely by the preference of sound, in the general structure of the period, provided it is not such as to mislead the reader, in the application of the word.

Thirdly. When one auxiliary and a participle are used, the modifier is usually placed between them or it follows the participle; as "he was graciously received," or "he was received graciously." The first is the most elegant.

Fourthly. When two auxiliaries are used, the adverb is usually placed after the second; as "We have been kindly treated"—But it may follow the participle, "We have been treated kindly;" and in some cases it may precede the auxiliaries; as "And certainly you must have known." Junius. Letter 8.

Fifthly. When adverbs are emphatical, they may introduce a sentence, and be separated from the word to which they belong, as "How completely this most amiable of human virtues had taken possession of his soul!" Port. Lect. 8. This position of the modifier is most frequent in interrogative and exclamatory phrases.

The adverb always is usually placed before a verb.

Never commonly precedes a single verb, except be, which it follows: as "We are never absent from Church on Sunday." It is sometimes placed before an auxiliary; as, "He never has been at court;" but it is more correctly and elegantly placed after the first auxiliary, as "He has never been at court"—" he has never been intoxicated."

This word has a peculiar use in the phrase "ask me never so much dowry." Gen. 34. "The voice of charmers, charming never so wisely." Psalm. 58. The sense is. "Ask me so much dowry as never was asked before"

The use of *here* and *there*, in the introduction of sentences before verbs, forms an authorized idiom of the language; though the words may be considered as redundant. The practice may have originated in the use of the hand in pointing, in the early stage of society.

Here, there, and where, originally denoting place, are now used in reference to words, subjects and various ideas of which place is not predicable. "It is not so with respect to volitions and actions; here the coalesence is intimate." Hermes ch. 8. "We feel pain, in the sensations, where we expected pleasure." Locke. 2. 7. 4.

Hence, whence, and thence, denoting the place from which a departure is stated, are used either with or without the preposition from. In strictness, the idea of from is included in the words, and it ought not to be used. These words also are used not only in reference to place, but to any argument, subject, or idea, in a discourse.

Hither, thicker, and whither, denoting to a place, are obsolete in popular practice; and obsolescent in writing; being superceded by here, there, where. This change is evidently the effect of the all-controlling disposition of men to abridge speech, by dismissing useless syllables, or by substituting short words of easy pronunciation for those which are more difficult. Against this disposition and its effects, the critic remonstrates in vain; and we may rest assured that common convenience and utility are better guides in whatever respects the use of words, than the opinion of men in their closets. No word or syllable in a language, which is essential, or very useful is ever lost.

While is a noun denoting time, and not a modifier. In this phrase, "I will go while you stay," the word is used in its primitive manner, without government, like many other names of portions of time—a month a week.

We are accustomed to use, as modifiers, a little and a great deal. "The many letters I receive, do not a little encourage me." Spect. No 124. Many names are used in like manner, as modifiers of the sense of verbs. "You don't care six-pence whether he was wet or dry."

Johnson.

RULE XL.

In polite and classical language, two negatives destroy the negation and express an affirmative; as "Nor did he not perceive them,"—that is, he did perceive them. This phraseology is not common nor agreeable to the genius of our tongue.

The following is a common and well authorized use of megatives. "His manners are not inelegant," that is, are elegant. This manner of expression however, when not accompanied with particular emphasis, denotes a moderate degree of the quality.

Note—In popular language, two negatives are used for a negation according to the practice of the ancient Greeks and the modern French. This idiom was primitive, and was retained in the Saxon; as "Oc se kining Peada *ne* rixade *nane* while."—Sax. Chron. p. 33. And the king Peada did not reign none while."—Sax chron. p. 33. The learned, with a view to philosophical correctness, have rejected the use of two negatives for one negation. The consequence is, we have two modes of speaking directly opposite to each other, but expressing the same thing. "He did not owe nothing," in vulgar language, "and he owed nothing," in the style of the learned, mean precisely the same thing.

RULE XLI.

ι.

Prepositions are followed by the names of objects and the objective case; as From New-York to Philadelphia; across the Delaware; over land; by water; through the air; with us; for me; to them; in you; among the people; toward us.

The preposition to is supposed to be omitted after verbs of giving, yielding, affording, and the like; as "give them bread;" "instead of give bread to them." "Afford him

15*

Digitized by Google

173

protection;" "furnish her with books." But this idiom seems to be primitive, and not elliptical.

From is sometimes suppressed, as in this phrase, "He was banished the kingdom."

Home, after a verb denoting motion to, is always used without to; as "We are going home."

After the attribute *near*, to is often omitted; as "To bring them nearer the truth." *Massillon*. Also after *adjoining*; as "a garden adjoining a river."

The preposition is sometimes separated from the word which it governs; as "With a longing for that state which he is charmed with," instead of with which he is charmed.

In many cases, the relative pronoun may be suppressed; as "I did not see the person he came with;" that is, with whom he came—and in other cases, what is employed for the word governed; as "I know not what person he gave the present to."

This separation of the preposition from the word governed by it, and the suppression of the substitute, are most common and most allowable in colloquial and epistolary language. In the grave and elevated style, they are seldom elegant; and never to be admitted to the prejudice of perspicuity; as in the following passage—" Of a space or number, which, in a constant and endless enlarging progression, it can in thought never attain to." Locke. 2. 17. 8.

A separation of the preposition to such a distance from the word with which it is connected in construction, is perplexing and inelegant.

Norm—In the use of *who* as an interrogative, there is an apparent deviation from regular construction—it being used without distinction of case; as "Who do you speak to"" "Who is she married to?" "Who is this reserved for?" "Who was it made by? This diom is not merely colloquial; it is found in the writings of our best authors.—It is the Latin, *cui* and *quo*.

RULE XLII.

Prepositions govern sentences and clauses or members of sentences; as "The marine acid—dissolves all metals, without excepting gold, silver or mercury." Encyc. art. Mineralogy. "Without seeking any more justifiable reasons of hostility." Hume. 1. 5.

"Besides making an expedition into Kent." Hume. 1. 36.

"From what has been said." Blair. Serm.

"To the general history of these periods will be added, &c. Enfield. Prelim.

"About the beginning of the eleventh century." ibm.

"By observing these rules and precautions." ibm.

In comparing the proofs of questionable facts." ibm.

"For want of carefully attending to the preceding distinction." Enfield. H. Ph. b. 2.

"After men became christians." Paley. Evid. ch. 1,

"Before you were placed at the head of affairs." Junius. Let. 8.

"Personal bravery is not enough to constitute the general, without he animates the whole army with courage. Fielding's Socrates. p. 188.

"Pray, get these verses by heart against I see you." Chesterfield Let.

"After having made me believe that I possessed a share in your affection." Pope. Let. 7.

"Ambition, envy,—will take up our minds, without we can possess oursel; es with sobriety." Spect. No. 143.

Nore.—We observe, in the foregoing passages, the preposition has two uses—one is to precede a word to which other words are annexed as necessary to complete the sense—"about the beginning" —Here the sense is not complete—the time is not designated—To define the time which is the object of the preposition *about*, it is necessary to add the words—"of the eleventh century"—*about that time*—So that the whole clause is really the object after the preposition.

10000

The other use of the preposition is to precede nouns verbs or other words which are not the object of the preposition, but which have a construction independent of it—as "*after* men became christians." Here men is the nominative to *became*; yet the whole proposition is as really the object governed by *after*, as the word *hour*, in the phrase, *after that hour.* "Against I see you" is a phrase of like construction—No single word is an object or in the objective case after *against*; but the whole affirmation is the object. "Without we can possess ourselves," has a like construction, and though superceded, in a degree, by *unless*, a word of similar import, is a true English phrase—After [this fact] men became christians—Against [that time when] I see you—Without [this fact] we can possess ourselvee.

Let us examine the following sentence, "After thus considering what was likely to happen, we are next to enquire, &c." Paley, Evid. ch. 2. Here considering refers to we; but is it not, with the whole clause, governed by after as the object?

"When we would consider eternity a parte ante, what do we but repeat in our minds the idea of years and ages?" Locke, 2, 17, 10. Here but has the force of a preposition, or of a verb in the imperative mode—equivalent to except—What do we—except this—we repeat, &c.

٤

ţ

t

ļ

"Man, but for this, no action could attend, And, but for that, were active to no end." Pope.

"What with more decency were in silence kept, And but for this unjust repreach, had slept. Dryd. Virg. x. 96.

"The law never speaks, but to command." Paley. Ph. 3.

RULE XLIII.

The modifiers of sentences, if, though, unless, and lest may be followed by verbs in the future tense, without the usual auxiliaries, shall, will or should, "as," "If his son ask bread, will he give him a stone ?"—" If he ask a fish, will he give him a serpent ?" "Though he slay me, yet will I trust in him." "He shall not eat of the holy things, unless he wash his flesh with water." "Lest thou say I have made Abram rich.

Except has a like effect upon the following verb; as "I will not let thee go except thou bless me." Whether has been numbered also among the conjunctions, which require the conditional mode: but by an egregious mistake. It is not a connective, nor does it imply a condition or hypothesis, but an alternative.

Digitized by GOOGLE

NOTE—The arrangement of the foregoing form of the verb, in the present tense of the subjunctive mode, is one of the most palpable mistakes that the compilers of English grammars have committed. It seems to have originated in the Saxon and ancient English practice of omitting the personal termination, to express *future* time—shall and will not being much used, in ancient times, for this purpose. In consequence of this practice, the translators of the bible, who wrote the style of the age of Elizabeth,* rarely made any difference between a *present uncertainty* and a *future contingency*; so that the present and future tenses of the original are confounded, and the form of the verb in English which comprehends both, has been placed by grummarians in the present tense of the Conditional Mode.

Deut. 9. 28. Lest the land say-In the original, lest the land shall say-in the future.

Deut. 30. 17. If thine heart turn away, so that thou wilt not hear-original-if thine heart shall turn-in the future.

1. Kings. 8. 31. If any man trespass against his neighbor—original—shall trespass.

As a general fact, the original Hebrew verb, which the translaters have rendered by a verb without *shall* or *will* or a personal termination, is in the future tense; and the English verb, having the sense of the future, ought to be arranged in grammars under that tense.

This remark is confirmed by the Greek translation of the seventy -who render the Hebrew by a verb in the future or by an aorist, the sense of which after a sign of condition, is future.

Job. 13. 15. Though he should slay me.

Levit. 22. 6. Unless he shall wash his body.

Gen. 14. 28. Lest thou shouldst say-or that thou shouldst not say.

Gen. 32. 26. Except thou shall bless me.

See also Gen. 19. 15.—Ex. 20. 19. and indeed examples in almost every chapter in the Old Testament.

In the New Testament, the acrist, with the sense of a future, is generally rendered by a like form of the English verb. "Take beed lest any man deceive you"—that is, shall or should deceive you.

* The present translation of the bible is commonly considered as made in the reign of James I. but on comparing it with the translations published in the beginning of Elizabeth's reign, it is evident that the last translators merely revised the former copies, altering a few phrases and words; but leaving the body of the style unaltered.

.

See 1. Cer. 10. 12.—Heb. 3. 12. a future tense,—Luke 8. 12. and numerous other examples.

The translation may be considered as correct, but to make it correct, the verbs should in grammars be arranged under the future tense, or an aorist.

For want of attention to the distinction between present uncertainty and future contingency, the translators have confounded two tenses of the original, into one in English. Thus Mat. 4. 3. ought to be translated—if thou art the son of God.—So also Luke, 23. 35. The original is in the Indicative—if he is the son of God. So also in John 10. 24—1. 25.—15. 18. If the world hates you; in the Indicative. Acts. 3. 39—if it is of God.—See also. John 7. 17—1. John 4. 1. and 8. 13.

In these and numerous other passages, the original Greek tense is correctly placed in the present tense of the *Indicative*—expressing a condition or uncertainty respecting a *present* fact, or event. And our common people who learn the language by tradition, preserve this use of the Indicative, which was the primitive use; for the Greeks and English derive it from the same source.

"And shall not God averge his own elect, who cry to him day and night, though he bear long with them :—Luke, 18.7. In the original, though he bears long with them.—The fact is not mentioned as a future contingency—though he should bear; but as a fact admitted though he bears long with them, still he will be averged.

"But though our outward man perish, yet the inward man is renewed day by day." — 2. Cor. 4. 16. The original, diaphtheiretai, is in the present tense of the Indicative—though our outward man perishes, or rather, is perishing or decaying. The translation, which indicates a future casual event, though our outward man perish, [that is, should perish] seems not to convey the Apostle's meaning, for he evidently speaks of a fact conceded, as present.

I might extend these criticisms to almost every passage in the bible, in which this pretended present tense of the subjunctive mode is used in our version, and show that the translators have confounded two tenses, which, in the original, are uniformly kept distinct.

To demonstrate the impropriety of that practice, let us attend to the principles of our own tongue.

It has been before remarked that *if*, though, and unless, are old Saxon verbs in the imperative Mode, and that the ingenious invention of our ancestors to express a condition or supposition was, to employ a verb, with the the sense of give, grant, put, be, if, that is, give the fact. We retain the idiom, and the words employed; but as these have lost their inflections, critics have ignorantly classed them with conjunctions—a part of speech to which they have no more alliance than they have to nouns or adjectives.^{*} We have

* If his son ask bread, will he give him a stone." In the name of reason, what single property of a conjunction has if? Though he slay me, yet will I trust in him." What connecting powers has though? Not the least; and this is equally true of si and nisi in Latin.

STATISTICS IN COMPANY

2009le

also certain words of Latin original, employed for precisely the same purpose—suppose, allow, and admit, which indeed are not yet misnamed and classed with conjunctions.

l

The Saxon method therefore of expressing condition, doubt or hypothesis, was to declare the fact which was to be supposed, by a verb in the Indicative Mode, and prefix to this fact or statement, a verb in the Imperative Mode, denoting give, grant, or suppose. Thus, "Give his son shall ask bread, will he give him a stone." Give, in the Imperative and his son shall ask bread, a sentence following give as its object—This is precisely the construction of such sentences of a conditional kind. Now to omit the personal termination of the verb in the hypothetical sentence—"Give, he ask bread," is to convert the sentence into false English, unless we suppose the tense future, and the auxiliary *utill or shall* suppressed. In the present tense, it is just as bad English, as to omit the termination after the Latin equivalent words suppose or admit. "Suppose, his son ask bread"

Unless, is a verb, on lysan, to unloose, release, dismiss, put away, remove. Unless he wash his flesh, he will be unclean. That is, dismiss, (or suppose not to exist) this fact—he wash his flesh, and he will be unclean. This shows that the sentence is not English, execpt we consider wash as in the future, and the auxiliary shall suppressed. That the tense is future, is not only obvious, from the sense of the verb itself, but from the following clause—If his son (shall) ask bread, will he give him a stone? "Unless he (shall) wash his flesh, he will be unclean—the last clauses are in the future, corresponding in time with the contingent events expressed in the first clause.

The use of the present tense of the subjunctive, without the personal terminations, was formerly very general. It was reserved for the classical writers of the eighteenth century to lay aside the pedantic forms, if he go, if it proceed, though he come, &c. and restore the native idiom of the language, by writing it as men spoke it, and as they still speak it, unless perverted by Grammars.

"If they are notions imprinted." Locke on Und. p. 15. Lon. 1796.

"If this was the decision of man only." Porteus, Lect. 3.

"If he has declared." Ibm.

"If the reality is proved." Lect. 6. Ibm.

"Though this institution is calculated." Coxe Trav. Russia.

"Unless some powerful motive animates this regularity and decency of appearance." Anarcharsis Trans. ch. 47.

"If a soldier has quitted his rank—if he is married—if the person admits the augmentation—if he does not."— Ibm. ch. 56.

"If the physician does not enjoin a proper regimen—if the patient deviates from his injunctions." Beddoes Hygeia. Es. 8.

" If newspapers are scurrilous." Junius, Let. 16.

"If no circumstances *are* alleged in his favor—if ne allegation *be* [is] made to lessen the force of evidence."—*Ibm.* 62.

"If he means Antigonus—if he means Demetrius."— Prideaux. 1. 2.

"Unless he thinks it proper or prudent so to do."-Blacks. Comment. 1. 2.

It is needless to multiply authorities—they may be cited without end—and such is THE LANGUAGE.

The poets omit the auxiliary of the future tense, without the sign of contingency—a license not admissible in prose.

That is shall streak.

The auxiliary is omitted also after a command.

"Gabriel-hath given

" Charge and strict watch, that to this happy place,

"No evil thing approach or enter in." Milt,

To the false rules of Grammars, we may ascribe the omission of the personal terminations of verbs after *till* and *before*—"At the end of which a new shaft is sunk, and this is done repeatedly, till the shaft *penetrate* to the nottom of the mine." *Heron's Fourcroy*, 2. 248. The

Digitized by Google

resounding of the rock when it is struck, warns the workmen before this event take place." Ibm. 249.

It has been remarked under the head of *tenses*, that the present tense is properly used for the future, after words which carry the mind forward to the time. *Till* is a word of this sort—its meaning is, to the time, which has such an effect upon future time, that we conceive and speak of it in the present tense.

In the first passage just cited, shall may perhaps be supplied—shall penetrate—which will render the sentence tolerable; but it cannot be prefixed to take in the second passage, and the sentence appears not only incorrect, but ludicrous. The same fault in Pinkerton's Geography, renders many passages incorrect, and some ridiculous.

Though the Mersey present a grand estuary, its course is not of great extent." Pinkerton's Geography, v. 1. Phil. 82.

This is not English even upon Lowth's principles for he lays it down as a rule, that when a fact is certain, admitted, or taken for granted, the indicative mode is the most proper—and he condemns this translation—"Though he were a son, yet learned he obedience." "Though the Mersey presents," is the true English idiom.

"A large river, which there divides itself into three branches before it join the sea. Vol. 2. 135.

"In Neged, a young Arab cannot marry till he have proved his valor." Ibm. 316.

Pinkerton's works abound with similar mistakes; he carries the false rules of Lowth to an extent never intended by the learned author. The like errors abound in the works of Paley.*

[•] From a careful survey of the history of our language, I have ascertained beyond any reasonable doubt, that the English Grammars which have been published within the last forty years, have introduced more errors than they have corrected.

"Those who hold such doctrine must require that a man so attacked, must, before he strike the assailant, stop and ascertain how the pistol is loaded." Trial of Selfridge, p. 160.

I know not whether this inaccuracy is the fault of the Judge or of the reporter; but *strike* cannot be considered here as either future or conditional; it expresses time in that indeterminate manner, which constitutes a principal office of a present tense of the Indicative—It ought to be *strikes*.

RULE XLIV.

Connectives join two or more clauses or members in a compound sentence :---as "Keep thy tongue from evil, and thy lips from speaking guile."

Here are two clauses united by and, which continues the sense and prevents the repetition of the verb keep.

"I sought the Lord and he heard me, and delivered me from all my fer.s." Here are three clauses combined into a sentence or period by the help of and; but a new verb is introduced in each, and the second connective prevents the repetition of the substitute he only.

"A wise son heareth his father's instruction; but a scorner heareth not rebuke." Here but joins the two clauses, but a new character is the nominative to a distinct verb, in the second clause, which exhibits a contrast to the first and no word is omitted.

RULE XLV.

Connectives join single words, which are the nominatives to the same verb, expressed or understood—or words which follow a transitive verb or a preposition in the same case. Connectives also join verbs, attributes, and modifiers. Examples :

"Peter and John went up into the Temple."

Here Peter and John are the nominatives to the verb, and the connective and prevents the repetition of the verb and following part of the sentence—Peter went up into the Temple. John went up into the Temple. I and you will go to Boston—William and Thomas must go to Washington. Neither I nor John was present—Peter or Henry will attend. "I am the way and the truth and the life."

In the following, the connective joins words which are the object of a verb or preposition. "The torch of truth discovers malevolence and envy." "I have despatched my correspondents with fair words and general civility."—Rambler.

I esteem him and her and them—He loves us and you. It is for you and me.

In the following, two verbs in the same tense or mode are joined by a connective. "Their fondness for allegory dazzled and confounded their understanding." Enfield.—"Plutarch taught Philosophy and was a voluminous writer." Ibm. "All are of the dust and turn to dust." "The idea is likely to sink deeper and spread the farther." •

Connectives join attributes and modifiers—as "He is wise and virtuous." "An orator pleads eloquently and plausibly.

The connectives perform a very important office in abridging language, by enabling us to omit words which must otherwise be repeated. Thus when I say "I esteem religion and virtue," two affirmations, "I esteem religion, I esteem virtue," are actually included in the sentence.

When several words or clauses succeed each other, it is not uncommon to omit the connective; as "We hear nothing of causing the blind to see, the lame to walk, the deaf to hear, the lepers to be cleansed." *Paley Evid*.

After the connective *than*, there may be and usually is an ellipsis of a verb, a name or other words; as "There is none greater in this house than I." Gen. xxxix. 9, that is, than I am. "In throne only will I be greater than thou. Gen. lxi. that is, than thou shalt be.

"He loves his money more than his honor," that is, more than he loves his honor.

"The king of the north shall return and set forth a multitude greater than the former," Dan. xi. 13, that is, than the former multitude.

"I will pull down my barns and build greater." Luke 12. that is, greater barns.

Sometimes other words may be suppressed without obscuring the sense, as "It is better for me to die than to live." Jonah 4. That is, better than for me to live.

Precise rules for the ellipsis of words, in all cases, cannot be given. In general, a writer will be governed by a regard to perspicuity, and omit no word, when the want of it leaves the sense obscure or ambiguous, nor when it weakens the strength of expression. But the following remarks and examples may be of use to the student.

1. When a number of words are joined in construction, the definitive may be omitted, except before the first; as the sun, moon and stars—a house and garden— So also when two or more attributes agree with the same name; as a great, wise and good prince. But when attributes or names are particularly emphatical, the definitive should be expressed before each—the sun, the moon and the stars.

2. The repetition of names adds emphasis to ideas; as "Christ the power of God and the wisdom of God," is more emphatical than "Christ the power and the wisdom of God."

3. An adjective belonging to two or more nouns joined by a connective, may be omitted except before the first; as my house and garden—good qualities and actions —" their interest and solicitation"—Rambler, 56. Nor 16* does it make any difference that the names are in different numbers, as our attributes have no distinction of number, the same word may be applied to the singular number and the plural; as a magnificent house and gardenshis house and lands. But when a precedes the first attribute, this construction is not elegant.

4. In compound sentences, a nominative pronoun or name may be omitted before all the verbs except the first; as I love, fear and respect the magistrate—instead of I love, I fear and I respect. The substitute may sometimes be supressed; as the man I saw, for the man whom I saw.

NOTE.—In this particular of the substitute, authors often indulge an unwarrantable license. The use of *that* for *that which* is obsolete and not justifiable. "We speak *that* we do know," is an original English phrase, but has ceased to be used by good writers.

The omission of the substitute in phrases like this—"There was an instance occurred"—for *which* occurred—is found in all our good anthors—but it is sogross a violation of syntax, without utility or pretext of any kind, that every writer should avoid it.

5. The verb may often be omitted; as he is wise and virtuous that is. he is wise, he is virtuous. They go to see and be seen that is, they go to see, they go to be seen.

After hence, thence and whence a verb is often omitted without occasioning obscurity—as "Hence the flood of vice which overspreads the land."

The auxiliars often supply the place of a principal verb; as John loves money better than you do; John has read more books than Peter has [read;] John shall go, but Peter shall not [go.]

5. An adverb need not be repeated with every word which it qualifies, the connective and rendering it unnecessary; as he spoke and acted gracefully. Here gracefully belongs to speaking as well as to acting.

A preposition may be omitted after a connective; as He walked over the hills and the valleys—that is, over the valleys.

After like and near, to is usually omitted; as "Like three distinct powers in mechanics." Blacks. Com. 1. 2. That is, like to three—"Such opinions as seemed to approach nearest the truth"-Enfield 2. 59-that is, nearest to the truth.

Likewise after join and adjoin, to is sometimes omitted; as "a garden adjoining the river."

For is omitted by the poets after mourn.

"He mourn'd no recreant friend, no mistress coy." Beattie.

NOTE 1.- The common rule respecting connectives is, that they join like modes and tenses, as well as like cases; or if the tense or mode is changed, the nominative to the additional verb must be repeated. But this is often false. "He lives temperately and he has long lived temperately," is an instance in which the repetition of the nominative · alleged to be indispensable. This I apprehend to be a great mistake—the sentence is more correct, as well as more easy and familiar, without the last nominative. So when we pass from the affirmative to the negative or from the negative to the affirmative, the subject or nominative is said to be always resumed. This is doubtless an egregious error .- "He is rich, but he is not respectable," is not so common a sentence, as "he is rich, but not respectable." The general rule respecting the ellipsis, is, that a word may always be suppressed, when the omission occasions no obscurity or ambiguity. "He is indolent and therefore will be poor." is perfectly good English. But let the rule be put to the test of authorities.

"Not that he is or ever was, obliged by these statutes to call a new parliament every year." Blacks. Com. b. 1. 2.

Is this incorrect? No man will pretend that this is not an authorized idiom and perfectly correct. And how shall we supply the ellipsis? Not that he is or he ever was! What sort of language is this?

"For when a man says gold is malleable, he means and would intinuate something more than this." Locke b. 3. ch. 10. 17.

What necessity is there of repeating the nominative before would? Not the least. It is impossible to improve the perspicuity of the sentence.

"That they have contributed and will probably yet contribute in a considerable degree to the abridgment of labor. Miller's retrospect, vol. 1. 390.

"But whatever they were or are." Burke. Reflections on the Fr. rev. 72.

"The whole has been done under the auspices, and is confirmed by the sanction, of religion and piety." ibm.

"It has opened and will more and more open their eyes." ibm. 84.

"If I have been born, or dwell or have served an apprenticeship in one town." Payley Phil. b. 6. 7.

"He neither receives nor can give delight." Johnson.

"Cowper's exhortation—is not inferior to similar exhortations in the accomplished translator of Tansillo's poem, the Nurse, by which these enchanted writers have induced and will continue, to induce, so many mothers," &c. Life of Cowper. Will any person say, this latter sentence is not correct? How will the grammarian supply the nominative? It cannot be done, without repeating a part of the preceding clause—by which these enchanting writers have induced, and by which they will continue to induce.—And of what use is this repetition? Does it add any thing to perspicuity or elegance? Not the least. Nothing can show, in a stronger light, the faisity of the rule.

"The philosopher who hath busied himself in considering their natures, and thinks he knows how far," &c. Locke, b. 2. ch. 8. 3.

Here a repetition of the nominative who before thinks, would improve the structure, of the seutence, but is by no means indispensable.

"These are the fountains of knowledge, from whence all the ideas we have or can have, do spring. Locke, 2. 1.

"I neither do nor can comprehend all I would." ibm. 2. 17.

In the two last examples, the repetition of the nominative, instead of improving, would impair the structure of the sentences.

The mischiefs resulting from a vague manner of instituting Grammar rules, will be fully seen in the perpetual confusion of tenses which occur in almost every author. We are told that conjunctions connect like tenses and modes—and whether is a conjunction. Let us see the consequence, "If I should ask any one, whether ice and water were two distinct species of things."

Locke, 3. 6. 18.

J

To resolve this sentence by common grammars, we are to say, that should ask is a verb in the imperfect tense of the subjunctive mode, whether is a conjunction, and were, a verb connected with esk by that conjunction. And what sort of language is this..." If I should ask"—a contingent event or hypothesis—of course the time. future—" Whether ice and water were, two distinct things," that is, were, in time past, and perfectly past; for were by itself never denotes time imperfectly past?

In this way, the author is led to write what he never intended sheer nonsense. The verb was intended to express a fact of general existence—one which is always true or false—that is, the identity or diversity of *ice* and *water*—a fact existing in nature, and therefore to be mentioned in the present tense indefinite—"Whether ice and water *are* two distinct substances."

"It would seen that iniquietude was as natural to it as its fluidity." Golds. An. Nat.ch. 17. Here is a similar mistake—the use of the first verb in what is called past time, leading the author to use a second verb in the same tense—But that is no connective, any more than every substitute in the language—The inquietude of the ocean is a natural property, existing at all times—and the author meant the verb to express that idea. "It would seem that inquietude is as natural to the sea as its fluidity." To show this to be the real construction, let the order of the words be changed. "Inquietude toss as natural to the sea as its fluidity.—Ihad would seem." This arrangement exhibits the mistake in its true light. Let the reader attend to the following passages.

"If my readers will turn their thoughts back on their old friends, they will find it difficult to call a single man to remembrance, who appeared to know that life was short, [is short] till he was about to lose it." Rambler, No. 71.

"Upon this supposition the alchemists went, who, supposing that all bodies were [are] composed of salt, sulphur and mercury." Encyclop. art. Chemistry, 23.

"They considered the body as a hydraulic machine, and the fluids as passing through a series of chemical changes; torgetting that animation was is its essential characteristic." Darwin. Zoon. pref.

"A stranger to the poem would not easily discover that this was [is] verse." Murray's Grammar.

"From the figure and movements of the feathered tribes, we should be led to imagine that the structure of their organs was [is] extremely different from that of quadrupeds—their economy and way of living required [require] some variations of their frame." Smellie Phil. of Nat. Hist. p. 71.

"Supposing Parliament had a right to meet spontaneously—and if half of the members met [should meet] and half *absented* [should absent] themselves, who shall determine which is the legislative body?" Blacks. Com. 1. 2.

"Two more were stationed in Dalmatia, in a situation, if a war broke [should break] out at their back, to support the other legions; and if a sudden emergence *required* [should require] their presence, ready to advance by rapid marches into Italy." *Murphy's Tacitus*. 1. 264.

The employment of these verbs by the translator is the less excusable, as he had the original to guide him to the true sense"- que-si repentisum auxilium Italia posceret, haud procul accirentur." If Italy should require sudden aid—the legions might be called from a small distance.

Examples of this mistake may be cited without end—but those which I have collected are amply sufficient to show the miserable state of grammatical knowledge. How easy would it have been to detect these blunders, had the parts of speech been understood, and properly classed ! Take for example, the passage from Murray—and resolve it according to the explanation of that which is given in the preceding pages—" This was verse—a stranger to the poem would not easily discover that. What nonsense ! But correct the verb. "This is verse—a stranger would not easily discover that." The whole error has arisen probably from considering that as a conjunction—when in fact it is a representative of the following member of the period—and the sentence is found to consist of two clauses—one hypothetical, the other declaratory—""A stranger to the poem, (if he should attempt) would not easily discover that—this is verse.

From the practice of connecting like tenses, probably has arisen a similar misapplication of tenses, where no connective is used; as "In this way we might indicate which of their elements existed [exists] in excess." Lavoisier by Kerr.

"It would be true gold to him and belong to that species, who include malleableness in his nominal essence." Locke, 3. 6. 35.

It ought to be who should include. A similar mistake in the following passage is really ludicrous—"I said to him that he should rebuild the Greek cities and give them wise laws, until a proper time arrived to restore them to liberty." Anacharsis, 3 231. It ought to be should arrive.

A few authors led by their own sense of right and wrong, [for surely they have had no Grammar to guide them] have occasionally avoided these errors and written the language with correctness. And among these is the translator of Anarcharsis, notwithstanding .he mistake just cited.

"They said that man is an animal." Anarch. vol. 4. note.

"He told us that these birds are natives of Samos." ibm. ch. 74. "Sabellius, who openly taught that there is but one person in the Godhead." Encyc. art. Sabellius.

"His master had taught him that happiness consists in virtue."

Anarch. ch. 7.

D. Laertius says, the Egyptians taught that matter is the first principle." Enfield. Hist. Phil. 1. ch. 8.

"Anaxagoras affirmed that a pure mind governs the universe."

ibm. ch. 3. b. 2.

If we examine these sentences, we shall find the time correctly affirmed in each member—The first declares a fact *past*—the last, a fact *now existing*, as well as when the affirmation was made.

"He told us that these birds are natives of Samos"—or according to the idea before explained—these birds are natives of Samos—he told us thatMan is an animal—they said that—happiness consists in virtue his master taught him that.

I have been the more particular in illustrating this part of my subject, to show the necessity of tracing the idioms to their true source, of understanding the principles of construction, and of calling the parts of speech by their true names.

Punctuation.

Punctuation is the marking of the several pauses which are to be observed, in reading or speaking a sentence or continued discourse. By means of pauses, a discourse is divided into periods or complete sentences, and periods into clauses or simple sentences, and these, into phrases.

A period is a sentence complete, making perfect sense, and not connected in construction with what follows. The pause after the period is marked by a point [.] and in speaking, is distinguished by a cadence or fall of the voice.

The members of a period, or clauses and phrases, are all more or less connected in sense, and according to the nearness of the connection, are marked by a comma, [,] a semicolon [;] or a colon [:]

The comma is the shortes pause, and is often used to mark the construction, where very little interruption of voice is allowable.

A simple sentence or clause contains an affirmation, a command or a question, that is, one personal verb, with its nominative and adjuncts. By *adjunct*, is meant any phrase or number of words added by way of modifying or qualifying the primary words. Thus when it is said, "Cicero was an orator of a diffuse style," the latter words, of a diffuse style, are the adjunct of orator, and the whole forms a complete simple sentence, with one verb or affirmation.

A phrase contains no assertion, or does not amount to a proposition.

÷.,

A PHILOSOPHICAL AND

COMMA.

RULE I. In general the parts of a simple sentence or clause are not to be separated by any point whatever; as "Hope is necessary in every condition of life." But when a simple sentence is long, or contains a distinct phrase or phrases, modifying the affirmation, it may be divided by a comma; as "To be very active in laudable pursuits, is the distinguishing characteristic of a man of merit." "By revenging an injury, a man is but even with his enemy." In most cases, where a short pause will give distinctness to ideas, a comma is well placed after an important word; "To mourn without measure, is folly; not to mourn at all, insensibility."

The pause after *measure*, in this sentence is essential to the strength of the expression. "The idea of beauty is vague and undefined, different in different minds, and diversified by time or place." Rambler.

RULE II. When a connective is omitted between two or more words, whether names, adjectives, pronouns, verbs or modifiers, the place is supplied by a comma; as "Love, joy, peace and blessedness are reserved for the good." "The miseries of poverty, of sickness, of captivity, would, without hope, be insupportable." Rambler. "We hear nothing of causing the blind to see, the lame to walk, the deaf to hear, the lepers to be cleansed." Paley. "He who loves, serves and obeys his maker, is a pious man." "Industry steadily, prudently and vigorously pursued, leads to wealth." "David was a brave, martial, enterprising prince." "The most innocent pleasures are the most rational, the most delightful and the most durable."

RULE III. Two or more simple sentences closely connected in sense, or dependent on each other, are separated by a comma only; as "When our vices leave us, we flatter ourselves we leave them." "The temperate man's pleasures are durable, because they are regular." " T hat all the duties of morality ought to be practised, is without difficulty discoverable, because ignorance or uncertainty would immediately involve the world in confusion and distress." Rambler, 81.

RULE IV. The sentence independent or case absolute, detached affirmations or phrases involved in sentences, and other important clauses, must be separated from the other parts of a sentence, by a comma; as "The envoy has returned, his business being accomplished." "The envoy, having accomplished his business, has returned," "Providence has, I think, displayed a tenderness for mankind."—Rambler. "The decisions of patronage, who was but half a goddess, has been sometimes erroneous." Rambler. "The sciences, after a thousand indignities, retired from the palace of patronage." *ibm.* "It is, in many cases, apparent." *ibm.*

RULE V. A comma is often required to mark contrast, antithesis, or remarkable points in a sentence, and sometimes very properly separates words closely dependent in construction; as "a good man will love himself too well to *lose*, and his neighbor too well to win, an estate by gaming." "Prosperity gains friends, and adversity *tries* them. "It is harder to avoid censure, than to gain applause."

"Though deep, yet clear; though gentle, yet not dull."

RULE VI. A single name in apposition is not separated by a comma; as "the Apostle Peter"—but when such name is accompanied with an adjunct, it should be separ rated; as "Parmenio, a friend of Alexander's, hearing the great offers that Darius had made, said, "Were I Alexander, I would accept them." "So would I, replied Alexander, were I Parmenio."

RULE VII. Terms of address, and words of others repeated, but not introduced as a quotation, are separated by a comma; as "Wherefore, Sirs, be of good cheer."

A PHILOSOPHICAL AND

"My son, hear the counsel of thy father." "Thus shalt thou say unto the children of Israel, 1 AM hath sent me unto you." Exodus.

RULE VIII. Modifying words and phrases, as however, nay, hence, besides, in short, finally, formerly, &c. are usually separated by a comma; as "It is, however, the task of criticism to establish principles." Rambler.

SEMICOLON.

The semicolon is placed between the clauses of a period, which are less closely connected than such as are separated by a comma.

First. When the first division of a sentence completes a proposition, so as to have no dependence on what follows; but the following clause has a dependence on the preceding, the two parts are separated generally by a semicolon; as "It may be laid down as a maxim, that it is more easy to take away superfluities than to supply defects; and therefore he that is culpable, because he has passed the middle point of virtue, is always accounted a fairer object of hope, than he who fails by falling short." Rambler. In this sentence the part of the sentence preceding the semicolon is a perfect period in itself, and might have been closed with a full point; but the author has added another division, by way of inference, and this is dependent on the first division. The author proceeds-"The one has all that perfection requires, and more, but the excess may be easily retrenched; the other wants the qualities requisite to excellence." -Here the first division makes a complete proposition: but the antithesis begun by the numeral one, is not complete, without the last division.

"Economy is no disgrace; for it is better to live on a little, than to out live a great deal."

"Be in peace with many; nevertheless, have but one counsellor of a thousand."

one

"A friend cannot be known in prosperity; an enemy cannot be hid in adversity."

In general then, the semicolon separates the divisions of a sentence, when the latter division has a dependence on the former, whether the former has a dependence on the latter or not.

Secondly. When several members of a sentence have a dependence on each other, by means of a substitute for the same principal word, and the clauses, in other respects, constitute distinct propositions, the semicolon may be used; as "Wisdom hath builded her house; she hath hewn out her seven pillars; she hath killed her beasts; she hath mingled her wine; she hath also furnished her table." Prov. 9.

COLON.

The Colon is used when the sense of the division of a period is complete, so as to admit of a full point, but something is added by way of illustration; as "A brute arrives at a point of perfection that he can never pass: in a few years he has all the endowments he is capable of; and were he to live ten thousand more, would be the same thing he is at present. Spect. No. 111.

Note.—This point is of little use; the difference between the colon and semicolon is so small, that the two pauses are frequently confounded, as may be seen in our present version of the Proverbs. It is said that a colon should be placed before a quotation; but I consider the use of the semicolon as preferable. I conceive the colon might be rejected without injury to the perspicuity of sentences; and punctuation very much simplified by substituting the semicolon and the full point. That slight dependence of a subsequent sentence upon a preceding one, which is marked by a colon, is also marked by the full point; for we are not to suppose a full point precludes a connection between sentences. Let the following sentences from the Rambler No. 31, be cited as an example.

"With the great and ambitious, I would discourse of honors and advancements.—To the rich I would tell of inexhaustible treasures and the sure method to attain them. I would teach them to put out their money on the best interest, and instruct the lovers of pleasure how to secure and improve it to the highest degree. The beauty should

195

learn of me how to preserve an everlasting bloom. To the afflicted I would administer comfort, and relaxation to the busy."

All the parts of a continued discourse are connected; and often by such nice grades of dependence, that it is not easy to discern, much less to mark the minute distinctions. I have never examined any author, whose use of the points is either accurate or uniform; and in particular the colon is every where confounded with the semicolon or the period.

PERIOD.

The Period or full point marks a completion of the sense, a cadence of the voice, and the longest pause used between sentences. It closes a discourse also, or marks a completion of a subject, chapter or section.

The full point is used also after initials when used alone; as after N. S. for New Style; and after abbreviations; as *Croc. Anglic.* for Crocus Anglicanus.

To these may be added,

The dash—which marks a break in the sentence or an abrupt turn; as "If thou art he—but O how fallen !"

The interrogation point ? that closes a sentence which asks a question; as "How long, ye simple ones, will ye love simplicity ?"

The exclamation point ! which is used after sudden expressions of surprise, or other emotions; as "O happiness ! Our being's end and aim !"

The parenthesis () and hooks [] include a remark or clause, not essential to the sentence in construction, but useful in explaining it or introducing an important idea. They mark a moderate pause, and the clause included is read with a depressed tone of voice; as

"Know then this truth (enough for man to know) Virtue alone is happiness below." Pope.

It will be readily seen that the sentence is not at all dependent on the parenthetical clause; but the converse is not true, for that clause has a dependence more or less remote, on the sentence. Thus, enough for man to know, is not intelligible without connecting it with the parts of the sentence preceding and following. So in this passage; "If any one pretends to be so sceptical, as to deny his own existence (for really to doubt of *it*, is manifestly impossible) let him enjoy his beloved happiness." Locke. 4. 10. 2. The included clause here is connected with the preceding part of the sentence, and *it* is a substitute for existence.

With regard to the duration of the pauses, it may be observed that the comma, semicolon, colon and full point, may bear to each other the proportion of one, two, four and six; and the interrogation point and exclamation point may be considered each as equal in time to the colon or period. But no precise rule can be given, which shall extend to every case; the length of the pauses must depend much on the nature of the discourse, and their respective proportions may be often varied to advantage by a judicious speaker.

Prosody.*

PROSODV is that part of Grammar which treats of the pronunciation of words, and the laws of versification.

Pronunciation is regulated principally by accent and quantity.

Accent is a particular stress of voice with which a certain syllable of a word is uttered, and by which it is distinguished from the others. Thus, in pronouncing probability, we lay a greater stress of voice upon the third syllable, than upon the others—the voice naturally resting upon that, and passing over the others with rapidity and a slight enunciation. This stress of voice on a particular part of a word, is equally necessary to the ease of utterance and the melody of speaking.

^{*}The substance of the remarks under this head was published more than thirty years ago. For some of the observations I am indebted to Sheridan's Art of Reading; but for more of them, to the Honorable John Trumbull, Esq. one of the Judges of the Supreme Court of Connecticut. His rules of metrical composition, originally published in my Grammar and afterwards in my Dissertations on the English Language, are probably the best which have been written.

In addition to the accent which may be called primary. there is, in pronouncing words of many syllables, a secondary accent, less distinct than the principal accent, but evidently distinguishing some one syllable from those which are unaccented. Thus in the word indiscriminate. the principal accent is on the third syllable; but the first syllable is evidently uttered with more force of voice, than the second and two last syllables. The final cause of both accents is the ease of pronunciation; and by this, should both be regulated; for that manner of pronouncing words which is most easy for the speaker, enables him to utter the several syllables with the most distinctness, which is consistent with a rapid communication of thoughts; and this is necessary to render his enunciation agreeable to his hearers. Hence no rules of pronunciation drawn from the termination of words, from their etvmologies, or from the practice of popular speakers, should be suffered to interfere with this fundamental principlethe ease of utterance-for a forced, unnatural accent is not only painful to the speaker, but utterly destructive of melody.

The accent may fall on a vowel or on an articulation. When it falls on a vowel, the vowel is long—as in glory, table, lawful. When it falls on an articulation, the consonant closes the syllable, and the preceding vowel is short; as in hab'it, grat'itude, deliv'erance.*

But this is not the worst evil. The usual rules for dividing syllables, are not only arbitrary, but false and absurd. They contradict the very definition of a syllable given by the authors themselves. Thus Lowth defines a syllable to be "a sound either simple or compounded, pronounced by a single impulse of the voice, and con-

ļ

٩

^{*}It may be thought that I am captious in criticising the works of English authors, or of others who have written on this subject, but the propriety of detecting error, wherever found, supercedes the necessity of apology.

It has been the practice of most English authors to place the marks of accent, in all cases, over the vowel of the accented syllable —a practice probably borrowed from the Greek language. Thus in Johnson's Dictionary, the vowel a in habit as well as o in habit, has the mark of accent, for which reason the mark is no guide to the true sound of the letter, and a learner would be led to give to a its long sound thus, ha bit—as well as to o its long sound in holy.

The quantity of a syllable is the time in which it is promounced. In English this time is *long* or *short*—long as in frame, denote, compensation—short, as in that, not, melon.

The accent has no small influence in determining the length of a syllable, by prolonging the sound of the vowel; but, in many words, vowels have their long sound, though not under the accent, as nosegay, agitate.

There are some general rules for accenting syllables, which may be discovered by attending to the analogy of formation. Thus words ending in tion and sion have the accent on the last syllable save one; as protection, adhesion; words ending in ty usually have the accent on the last syllable except two, as vanity, hostility.

Few of these rules however are so general, that the exceptions to them are not almost as numerous as the words which fall within the rule; and therefore the accent of words is best learnt from a dictionary and general usage. The rules laid down for this purpose in sevaral works of distinction, are so numerous and subject to so many exceptions, that they tend rather to embarrass, than to assist the student.

Most prosodians who have treated particularly of this subject, have been guilty of a fundamental error, in considering the movement of English verse as depending on long and short syllables, formed by long and short vowels.

stituting a word or part of a word." But in dividing syllables, no regard is had to the definition—for manifest—Lowth divides thus, ma-ni-fest. Here the first syllable man is pronounced with a single impulse of the voice—according to the definition; yet in writing, the syllable is split—the constituent part of a word, is divided into two parts—that which is to be pronounced with a single impulse of the voice, is so separated, as to require two impulses. A syllable in pronunciation is an indivisible thing; and strange as it may appear, what is indivisible in utterance, is divided in writing; when the very purpose of dividing words into syllables in writing; is to lead the learner to a just pronunciation. Thus Murray, though he admits that a "syllable is short, when the accent is on the articulation" yet separates that consonant from the syllable—as in me-lon—ci-vit —ti-mid. Most of the English elementary books which I have seen are liable to the same objection. This hypothesis has led them into capital mistakes. The truth is, many of those syllables which are considered as long in verse, are formed by the shortest vowels in the language; as strength, health, grand. The doctrine, that long vowels are necessary to form long syllables in poetry is at length exploded, and the principles which regulate the movement of our verse, are explained; viz. accent and emphasis. Every emphatical word, and every accented syllable, will form what is called in verse a long syllable. The unaccented syllables, and unemphatical monosyllabic words, are considered as short syllables.

But there are two kinds of emphasis; a natural emphasis, which arises from the importance of the idea conveyed by a word; and an accidental emphasis, which arises from the importance of a word in a particular situation.

The first or natural emphasis belongs to all nouns, verbs, participles and adjectives, and requires no elevation of the voice; as

"Not half so swift the trembling doves can fly."

The last or accidental emphasis is laid on a word when it has some particular meaning, and when the force of a sentence depends upon it; this therefore requires an elevation of the voice; as,

"Perdition catch my soul-but I do love thee."

So far the prosody of the English language seems to be settled; but the rules laid down for the construction of verse, seem to have been imperfect and disputed.

Writers have generally supposed that our heroic verse consists of five feet, all pure lambics, except the first foot, which they allow may be a Trochee. In consequence of this opinion, they have expunged letters from words which were necessary; and curtailed feet in such a manner as to disfigure the beauty of printing, and in many instances, destroyed the harmony of our best poetry.

The truth is, so far is our heroic verse from being confined to the Iambic measure, that it admits of eight feet, and in some instances of nine. I will not perplex my readers with a number of hard names, but proceed to explain the several feet, and show in what places of the line they are admissible.

An lambic foot, which is the ground of English numbers, consists of two syllables, the first *short* and the second *long*. This foot is admitted into every place of the line. Example, all lambics,

"Where slaves once more thier native land behold,

No fiends torment, no christians thirst for gold." Pope.

The Trochee is a foot consisting of two syllables, the first long and the second short? Example.

"Wārms in the sun, refreshes in the breeze, Glows in the stars, and blossoms in the trees."

Pope.

The Trochee is not admissible into the second place of the line; but in the third and fourth it may have beauty, when it creates a correspondence between the sound and sense.

"Eve rightly call'd mother of all mankind."

"And staggered by the stroke, drops the large ox."

The Spondee is a foot consisting of two long syllables. This may be used in any place of the line.

1. "Good life be now my task, my doubts are done." Dryden.

2. "As some lone mountain's monstrous growth he stood." Pope.

But it has a greater beauty when preceded by a Trochee.

"Load the tall bark and launch into the main."

3. "The mountain goats came bounding o'er the lawn."

4. "He spoke, and speaking in *proud triumph spread*, The long contended honors of her head." Pope.

5. "Singed are his brows, the scorching lids grow black." Pope.

The Pyrrhic is a foot of two short syllables; it is graceful in the first and fourth places, and is admissible into the second and third.

1. "Nor in the helpless orphan dread a foe."

Pope.

- 2. _____"On they move, Indissölübly firm."_____Milton.
- 3. "The two extremes appear like man and wife, Coupled togeth*er for* the sake of strife."

Churchill.

But this foot is most graceful in the fourth place.

"The dying gales that pant *upon* the trees."

"To farthest shores the ambrosial spirit flies, Sweet to the world and grateful to the skies."

The Amphibrach is a foot of three syllables, the first and third short, and the second long. It is used in heroic verse only when we take the liberty to add a short syllable to a line.

"The piece you say is incorrect, why take it,

"I'm all submission, what you'd have it, make it."

This foot is hardly admissible in the solemn or sublime style. Pope has indeed admitted it into his Essay on Man:

"What can ennoble sots or slaves or cowards, Alas! not all the blood of all the Howards."

Again:

"To sigh for ribbands, if thou art so silly, Mark how they grace Lord Umbra or Sir Billy."

But these lines are of the high burlesque kind, and in this style the Amphibrach closes lines with great beauty.

202

The Tribrach is a foot of three syllables, all short; and it may be used in the third and fourth places.

"And rolls impetuous to the plain."

Or thus:

"And thunders down impetuous to the subject plain."

The Dactyl, a foot of three syllables, the first long and the two last short, is used principally in the first place in the line.

"Furtous he spoke, the angry chief replied."

"Murmuring, and with him fled the shades of night."

The Anapest, a foot consisting of three syllables, the two first short and the last long, is admissible into every place of the line.

> "Căn ă bôsôm số gêntlế rếmāin, Unmoved when her Corydon sighs? Will a nymph that is fond of the plains, These plains and these vallies despise! Dear regions of silence and shade, Soft scenes of contentment and ease, Where I could have pleasantly stay'd, If aught in her absence could please."

The trissyllabic feet have suffered most by the general ignorance of critics; most of them have been mutilated by apostrophies, in order to reduce them to the lambic measure.

Thus in the line before repeated,

"Murmuring, and with him fled the shades of night,"

we find the word in the copy reduced to two syllables, murm'ring, and the beauty of the Dactyl is destroyed.

Thus in the following:

5 "On every side with shadowy squadrons deep,"

by apostrophizing every and shadowy, the line loses its harmony. The same remark applies to the following.

"And hosts infuriate shake the sbudd'ring plan." "But fashion so directs, and moderns raise On fashion's mould'ring base, their transient praise." Churchill.

Poetic lines which abound with these trissyllabic feet, are the most flowing and melodious of any in the language; and yet the poets themselves, or their printers, murder them with numberless unnecessary contractions.

It requires but little judgement and an ear indifferently accurate, to distinguish the contractions which are necessary, from those which are needless and injurious to the versification. In the following passage we find examples of both.

"She went from op'ra, park, assembly, play, To morning walks and prayers, three times a day; To pass her time 'twixt reading and bohea, To muse and spill her solitary tea; Or o'er cold coffee trifle with the spoon, Count the slow clock, and dine exact at noon; Divert her eyes with pictures in the fire, Hum half a tune, tell stories to the 'squire; Up to her godly garret after sev'n, There starve and pray, for that's the way to heav'n." *Pope's Epistles.*

Here e in opera ought not to be apostrophized, for such a contraction reduces an Amphibrachic foot to an Iambic. The words prayers, seven and heaven need not the apostrophe of e; for it makes no difference in the pronunciation. But the contraction of over and betwixt is necessary; for without it the measure would be imperfect.

PAUSES.

HAVING explained the several kinds of feet, and shown in what places of a verse they may be used, I proceed to another important article, the pauses. Of these there are too kinds—the *cesural* pause, which divides the line into two equal or unequal parts; and the *final* pause which closes the verse. These pauses are called *musical*, because their sole end is the melody of verse.

The pauses which mark the sense, and for this reason are denominated *sentential*, are the same in verse as in prose. They are marked by the usual stops, a comma, a semicolon, a colon or a period, as the sense requires, and need no particular explanation.

The cesural pause is not essential to verse, for the shorter kinds of measure are without it; but it improves both the melody and the harmony.

Melody in music is derived from a succession of sounds; harmony from different sounds in concord. A single voice can produce melody; a union of voices is necessary to form harmony. In this sense harmony cannot be applied to verse, because poetry is recited by a single voice. But harmony may be used in a figurative sense, to express the effect produced by observing the proportion which the members of verse bear to each other.*

The cesural pause may be placed in any part of the verse: but has the finest effect upon the melody, when placed after the second or third foot, or in the middle of the third. After the second:

"In what retreat, inglorious and unknown, Did genius sleep, when dulness seiz'd the throne."

After the third:

l to

re

ne icb "O say what stranger cause, yet unexplored, Could make a gentle belle reject a lord?"

In the middle of the third:

"Great are his perils, in this stormy time, Who rashly ventures, on a sea of rhyme."

In these examples we find a great degree of melody, but not in all the same degree. In comparing the divisions of verse, we experience the most pleasure in viewing those which are equal; hence those verses which

Digitized by Google

*Sheridan's Art of Reading. 18 have the pause in the middle of the third foot, which is the middle of the verse, are the most melodious. Such is the third example above.

Ŧ

ŧ

In lines where the pause is placed after the second foot, we perceive a smaller degree of melody, for the divisions are not equal; one containing four syllables, the other six, as in the first example.

But the melody in this example, is much superior to that of the verses which have the cesoral pause after the third foot; for this obvious reason: When the pause bounds the second foot, the latter part of the verse is the greatest, and leaves the most forcible impression upon the mind; but when the pause is at the end of the third foot, the order is reversed. We are fond of proceeding from small to great, and a climax in sound pleases the ear, is the same manner as a climax in sense delights the mind. Such is the first example.

It must be observed further, that when the cesural pause falls after the second and third feet, both the final and cesural pauses are on accented syllables; whereas when the cesural pause falls in the middle of the third foot, this is on a weak syllable, and the final pause, on as accented syllable. This variety in the latter, is another cause of the superior pleasure we derive from verses divided into equal portions.

The pause may fall in the middle of the fourth foot; as,

"Let favor speak for others, worth for me:"

but the melody, in this case, is almost lost. At the close of the first foot, the pause has a more agreeable effect.

"That's vile, should we a parent's fault adore, And err, because our father's err'd before?"

In the middle of the second foot, the pause may be used. but produces little melody.

Digitized by Google

"And who but wishes to invert the laws Of order, sins against the eternal cause." Harmony is produced by a proportion between the members of the same verse, or between the members of different verses. Example:

τ.

ΞĒ

÷ē

t

"Thy forests, Windsor, and thy green retreats, At once the monarch's, and the muse's seats, Invite my lays. Be present sylvan maids, Unlock your springs, and open all your shades."

. Here we observe, the pause in the first couplet, is in the middle of the third foot; both verses are in this res-Dect similar. In the last couplet, the pause falls after the = second foot. In each couplet, separately considered, 🖙 there is a uniformity; but when one is compared with the et other, there is a diversity. This variety produces a pleasing effect.* The variety is further increased, when the first lines of several succeeding couplets are uniform as Lea to themselves, and different from the last lines, which are li 🗶 also uniform as to themselves. Churchill, speaking of ; W) reason, lord chief justice in the court of man, has the folthe lowing lines:

Sea Strand Str

The first line of three of these couplets, has the pause after the second foot; in this consists their similarity. The last line in three of them, has the pause in the middle of the third foot; they are uniform as to themselves, but different from the foregoing lines. This passage, which

*Sheridan.

on the whole is very beautiful, suffers much by the sixth line, which is not verse, but rather hobbling prose.*

The foregoing remarks are sufficient to illustrate the use and advantages of the cesural pause.

The final pause marks the close of a line or verse, whether there is a pause in the sense or not. Sentential pauses should be marked by a variation of tone; but the final pause, when the close of one line is intimately connected with the beginning of the next, should be merely a suspension of the voice without elevation or depression. Thus:

"Of man's first disobedience, and the fruit Of that forbidden tree, whose mortal taste Brought death into the world, and all our woe, &c.

When these lines are read without a pause after the words *fruit* and *taste*, they degenerate into prose. Indeed in many instances, particularly in blank verse, the final pause is the only circumstance which distinguishes verse from prose.

EXPRESSION.

One article more in the construction of verse deserves our observation, which is *Expression*. Expression consists in such a choice and distribution of poetic feet as are best adapted to the subject, and best calculated to impress sentiments upon the mind. Those poetic feet, which end in an accented syllable, are the most forcible. Hence the lambic measure is best adapted to solemn and sublime

^{*}Churchill has improved English versification, but is sometimes too incorrect. It is a remark of some writer, "That the greatest geniuses are seldom correct," and the remark is not without foundation. Homer, Shakspeare and Milton, were perhaps the greatest geniuses that ever lived, and they were certainly guilty of the greatest faults. Virgil and Pope were much inferior in point of genius, but excelled in accuracy. Churchill had genius, but his contempt of rules made him sometimes indulge a too great latitude of expression.

subjects. This is the measure of the Epic, of poems on grave moral subjects, of elegies, &c. The Spondee, a foot of two long syllables, when admitted into the lambic measure, adds much to the selemnity of the movement.

"While the clear sun, rejoicing still to rise, In pomp rolls round immeasurable skies."

Dwight.

The Dactyl, rolls round, expresses beautifully the majesty of the sun in his course.

It is a general rule, that the more important syllables there are in a passage, whether of prose or verse, the more heavy is the style. For example:

"A past, vamp'd, future, old, reviv'd new piece."

"Men bearded, bald, cowl'd, uncowl'd, shod, unshod."

Such lines are destitute of melody, and are admissible only when they suit the sound to the sense. In the high burlesque style, of which kind is Pope's Dunciad, they give the sentiment an ironical air of importance, and from this circumstance derive a beauty. On the other hand, a large proportion of unaccented syllables or particles, deprives language of energy; and it is this circumstance principally which in prose constitutes the difference between the grave historical, and the familiar style. The greatest number of long syllables ever admitted into a heroic verse is seven, as in the foregoing; the smallest number is three.

"Or to a sad variety of woe."

The Trochaic measure, in which every foot closes with a weak syllable, is well calculated for lively subjects.

"Softly sweet in Lydian measures,

Soon he sooth'd his soul to pleasures;

War he sung is toil and trouble,

Honor but an empty bubble, &c.

The Anapestic measure, in which there are two short syllables to one long, is best adapted to express the impet-18* uosity of passion or action. Shenstone has used it to great advantage in his inimitable pastoral ballad. It describes beautifully the strong and lively emotions which agitate the lover, and his anxiety to please, which continually hurries him from one object and one exertion to another.

"I have found out a gift for my fair, I have found where the wood pigeons breed; Yet let me that plunder forbear, She will say 'twas a barbarous deed. For he ne'er could prove true, she averr'd, Who could rob a poor bird of her young: And I lov'd her the more when I heard Such tenderness fall from her tongue."

The Amphibrachic measure, in which there is a long syllable between two short ones, is best adapted to lively comic subjects; as in Addison's Rosamond.

> "Since conjugal passion Has come into fashion, And marriage so blest on the throne is, Like Venus I'll shine, Be fond and be fine, And Sir Trusty shall be my Adonis."

Such a measure gives to sentiment a ludicrous air, and consequently is ill adapted to serious subjects.

Great art may be used by a poet in choosing words and feet adapted to his subject. Take the following specimen.

"Now here, now there, the warriors fall; amain

Groans murmur, armor sounds, and shouts convulse the plain."

The feet in the last line are happily chosen. The slow Spondee, in the beginning of the verse, fixes the mind upon the dismal scene of woe; the solemnity is heightened by the pauses in the middle of the second and at the end of the third foot: But when the poet comes to shake the plains, he closes the line with three forcible lambics.

- . . ,

Of a similar beauty take the following example.

"She all night long, her amorous descant sung."

The poet here designs to describe the length of the night, and the music of the nightingale's song. The first he does by two slow spondees, and the last by four very rapid syllables.

The following lines, from Gray's Elegy, written in a country church yard, are distinguished by a happy choice of words.

"For who, to dumb forgetfulness a prey, This pleasing anxious being e'er resigned ? Left the warm precincts of the cheerful day, Nor cast one *longing*, *lingering* look behind?"

The words *longing* and *lingering* express most forcibly the reluctance with which mankind quit this state of existence.

Pope has many beauties of this kind.

"And grace and reason, sense and virtue split, With all the rash dexterity of wit."

The mute articulations with which these lines end, express the idea of *rending asunder*, with great energy and effect. The words *rash* and *dexterity* are also judiciously chosen.

In describing the delicate sensations of the most refined love, he is remarkable for his choice of smooth flowing words. There are some passages in his Eloisa and Abelard, which are extended to a considerable length, without a single mute consonant or harsh word.

OF READING VERSE.

With respect to the art of reading verse, we can lay down but a few simple rules; but these may perhaps be useful. 1. Words should be pronounced as in prose and in conversation; for reading is but rehearsing another's conversation.

2. The emphasis should be observed as in prose. The voice should bound from accent to accent, and no stress should be laid on little unimportant words, nor on weak syllables.

3. The sentential pauses should be observed as in prose; these are not affected by the kind of writing, being regulated entirely by the sense. But as the cesural and final pauses are designed to increase the melody of verse, the strictest attention must be paid to them in reading. They mark a suspension of voice without rising or falling.

To read prose well it is necessary to understand what is read; and to read poetry well, it is further necessary to understand the structure of verse. For want of this knowledge, most people read all verse like the lambic measure. The following are pure lambics.

"Above how high progressive life may go! Around how wide, how deep extend below !"

It is so easy to lay an accent on every second syllable, that any school boy can read this measure with tolerable propriety. But the misfortune is, that when a habit of reading this kind of meter is once formed, persons do not vary their manner to suit other measures. Thus in reciting the following line.

"Load the tall bark, and lounch into the main,"

may people would lay the accent on every second syllable; and thus read, our poetry becomes the most monotonous and ridiculous of all poetry in the world.

Let the following lines be repeated without its pauses, and it loses its principal beauty.

"Bold, as a hero, as a virgin mild.

212

So in the following.

" Reason, the card, but passion, is the gale.

"From storms, a shelter, and from heat, a shade."

The harmony is, in all these instances, improved much by the semipauses, and at the same time the sense is more clearly understood.

Considering the difficulty of reading verse, it is not surprising to find but few who are proficients in this art. A knowledge of the structure of verse, of the several kinds of feet, of the nature and use of the final, the cesural and the semicesural pauses, is essential to a graceful manner of reading poetry; and even this without the best examples, will hardly effect the purpose. It is for this reason that children should not be permitted to read poetry of the more difficult kind, without the best examples for them to imitate. They frequently contract, in early life, either a monotony or a sing song cant, which, when grown into a habit, is seldom ever eradicated.

A PRAXIS,

Or Example of Grammatical Resolution.

"If the excellence of Dryden's works was lessened by his indigence, their number was increased; and I know not how it will be proved, that if he had written less, he would have written better; or that indeed he would have undergone the toil of an author, if he had not been solicited by something more pressing than the love of praise." Johnson's Life of Dryden.

If, the imperative mode of the verb give, formerly written gif, the regular imperative of the Saxon gifan used to introduce a supposition of what is expressed in the following words.

- the—a definitive, used to limit the sense of excellence in its application to, "Dryden's Works"—that particular excellence.
- excellence, a name or noun, the nominative to the verb was, or the subject of the passive verb was lessened.
- of—a preposition, preceding Dryden's Works, and showing the relation of those words to *excellence*, which relation is that of property or possession—of the works of Dryden.
- Dryden's, a proper or appropriate name—that is, a name belonging to an individual, and not to a species—in the possessive case, governed by works.

works, a name in the plural number, following of.

was lessened—the passive form of the verb to lessen, in the past tense, indefinite, subjunctive mode, third person singular, agreeing with *excellence*, its nominative. This form of the verb is composed of the substantive verb was, and the participle in ed.

by-a preposition.

his—an attribute agreeing with indigence.

indigence—a name in the singular number, following the preposition by.

their-an attribute agreeing with number.

number-a name, the nominative to was increased.

- was increased—the passive form of the verb increase, in the past tense indefinite of the Indicative mode, third person singular, agreeing with number.
- and—a connective of the two sentences, the preceding and the following—The sense is complete at *increased*, and there the sentence might have been closed; but as other clauses are added by the writer, the pause is marked with a semicolon.

- I—a substitute for the writer's name, or a personal substitute—nominative case to know.
- know—a transitive irregular verb, affirming a fact, and therefore in the Indicative mode—first person singular, in the present tense indefinite, agreeing with *I*.
- not—a modifier of the verb know, rendering the affirmation negative.

how-a modifier of the verb, will be proved.

- it—a substitute of neuter gender, nominative case—representing the subsequent part of the sentence—the nominative to will be proved—inceptive, that is, introducing the verb, before the sentence or clause, which is the real nominative.
- will be proved—the passive form of the verb prove in the future tense, third person singular, agreeing with the nominative it.
- that—a substitute representing the same part of the sentence as *it*—how *it* will be proved—viz.—that which follows.

if—as before—an obsolete imperative verb, used to introduce a condition.

he-a substitute for Dryden-nominative to had written.

had written-a transitive verb, in the prior past tense, in-

- definite, subjunctive mode, third person singular agreeing with he.
 - less, an attribute in the comparative degree, here used as a substitute for a smaller quantity, the object after the transitive verb, had written.
 - he—a substitute for Dryden, nominative to would have written.
 - would have written—the irregular verb write, in the prior past tense indefinite, potential mode, third person singular, agreeing with he.

Digitized by Google

better—an attribute qualifying the action of the verb would have written—describing the manner of action in the comparative degree.

er-a connective of the sentences between which it stands, and expressing an alternative.

- that—a substitute representing the part of the sentence which follows—the words, I do not know how it will be proved, are here understood before that.
- indeed—an adverb or rather a compound of in and deed a preposition and noun.
- he—as before—nominative to would have undergone.
 - would have undergone—the irregular compound verb undergo, in the prior past tense of the potential mode agreeing with he, the third person.
 - the—a definitive, limiting the sense of toil, to a particular kind—the toil of an author.
 - toil—a name or noun, in the singular number—the object after the transitive verb, would have undergone.

of-a preposition.

an-a definitive, limiting the subsequent word to one person.

author-a name in the singular number, following of.

if—as before, expressing a condition.

- he—a substitute as before, nominative to had been solicited.
- had been solicited—the passive form of the verb solicit. rendered negative by the modifier not, in the prior past tense of the subjunctive mode, third person singular agreeing with he.

by—a preposition.

- something-aname, composed of, some, and thing-following by.
- more—an attribute of the comparative degree, used to modify the sense of pressing.
- pressing—a participle of the present tense of the verb press; but used as an attribute of the preceding word something.
- than—a connective, uniting the following words in construction, with the preceding.

the-a definitive, restraining the sense of love.

love-a name, nominative to the verb is understood.

of-a preposition.

praise-a name-following of.

Critical Notes.

"I persecuted this way unto the death." Acts 22. 4,

As no particular sort of death is here intended, the definitive *the* ought to have been omitted. Lowth.

"When he, the spirit of truth is come, he will guide you into all truth." John 16. 13.

As the sense is probably all evangelical truth, and not other kinds of truth, Lowth supposes the definitive the ought to have been used; all the truth, agreeable to the original Greek. This criticism is probably just; but the student must be cautious of following implicitly the use of the Greek article; for nothing is less determinate; and Lowth himself acknowledges that it has puzzled all the grammarians to reduce the use of it to any clear and certain rules. In the New Testament, it is often used in passages where it is not admissible in an English translation. Matth. 3. 8. "Bring forth therefore fruits meet for re-

pentance"-in the Greek, worthy of the repentance, Verse 11 .--- Whose shoes I am not worthy to bear"--- in the original, whose the shoes. In the same verse-"He shall baptize you with the Holy Ghost"-in the original, with Holy Ghost. Matth. 18.8. It is better for thee to enter into life halt or maimed-in the original, into the life. Same chapter, verse 2.-"And Jesus called a little child unto him"-in the original, there is no definitive-And Jesus calling child"-Verse 3. "Except ve be converted and become as little children"-in the original, as the children. Matth. 22. 13. "There shall be weeping and gnashing of teeth"-in the original, there shall be the [or this] weeping-and the gnashing of the teeth. Ch. 24. 3. "Upon the mount of the olives." Rom. 7. 1. "Know ye not, brethren, [for I speak to them that know the law,] how that the law;" in the original, I speak to them that know law. Verse 2. "For the woman that hath a husband is bound by the law"-in the original, bound by law. Verse 8. "For without the law, sin was dead." orig. Without law. Verse 21. "I find there a law." orig. I find there the law. A multitude of similar passages might be cited to prove how little is the analogy between the Greek and English languages, in regard to the use of the definitives.

But to place this fact in a stronger light, let it be observed, that the Greeks use both the article or definitive in conjunction with the pronoun this—that is, two definitives with the same word. Rom. 7. 24. "Who shall deliver me from the body of this death." orig. from the body of the this death, or the death this. Matth. 4. 3. "If thou art the son of God, command that these stones be made bread." orig. the these stones. This is a common idiom of the Greek, and one utterly repugnant to the genius of the English.

Equally singular is the use of the Greek article, before proper names—Matth. 2. 22. "He turned aside into the parts of Galilee." orig.—into the parts of the Galilee. ch. 17. 1. "Jesus taketh Peter." orig. the Peter.—ch. 3. 1.

"Preaching in the wilderness of Judea." orig. of the Judea."

We cannot therefore draw any general inference, respecting the extent of the signification of words in English, from the use of the Greek article. Indeed there are many cases where this article must be omitted, or utterly pervert the true meaning. Matth. 11. 8. "Behold they that wear soft clothing are in kings' houses"—in the original, in the houses of the kings. ver. 11. "among them that are born of women, there hath not risen a greater than John, the Baptist." in the original, them that are born of the women.

In other cases, the English the must be used where no article is found in the Greek, as in Matth. 11. 5. The blind receive their sight—the lame walk—the lepers are eleansed—and the deaf hear. Here is no article in the Greek, but in English it cannot be omitted, except before lepers.

Of the arbitrary and uncertain proof of the definite article, the French language furnishes abundant proof.

"L'avarice est de tous les vices, le plus odieux."

The avarice is the most hateful of all vices.

"Le gouvernement doit avant toutes choses protéger les proprietes." The government ought before all things to protect the properties. "Theophraste loue l'hospitalité et il a raison." Theophrast praises the hospitality, and he has reason." Barrett. Trans. of Cicer. de Off.

The use of the *le* before names of general application, is wholly arbitrary and useless, but established by custom.

∧ Some author, I think Blair, boasts of the superiority of the English over the Latin language, in the use of articles. This is a great error. The Latin unus is the English an—and is, ille, hic, answer all the purposes of the, this and that. The Romans-used these definitives when they wanted them, nor is any part of their writings left obscure for want of other articles. "Truly, this was the son of God." Matth. 27. 54.— Lowth supposes that the should be a, as this was spoke by a pagan who probably believed in a plurality of Gods.

So also in Dan. 3. 25.

"In this passage, "About an eight days." Luke 9.28. an is redundant or improper. Lowth.

"Nevertheless; Asa his heart, was perfect with the Lord." I. Kings. 15. 14. This mode of expressing possession is obsolete.

"The more shame for ye." The use of ye in the objective is admissible only in the comic and burlesque style. Lowth.

In popular practice, that and this are often followed by there and here—that there house—this here tree. This idiom is probably as old as language, and is not a corruption. It existed in the Celtic—an tigh od—that house there—and the French has preserved it—Cet maison la. It might have had its origin in the poverty of the primitive languages of the world; or it might have proceeded from the practice of pointing to objects described, or from the Saxon genitive of this; thissere; but in the improved style of modern language, it is unnecessary, and in English, is confined to the vulgar and colloquial style.

"I had rather," is probably a mistake for I would rather," but the error, at least in colloquial language, seems incorrigible.

"The rules of our religion, from which we are swerved." Tillotson. The passive form of swerve is obsolete. "Flee thee away"—"Was entered into a conspiracy"— "To vie charities"—"Take pains to agree the sacred and profane chronology"--are incorrect; for intransitive verbs do not admit the passive form, nor an object after them.

Succeed, though numbered among intransitive verbs has obtained a general use in a transitive sense—"Succeed the means of grace," is the customary language of divines, and well authorized.

ΎĘ

"If Jove this arm succeed." Pope.

In the word *abed*, *ashore*, &c. and before the participles, *acoming*, *agoing*, *ashooting*, *a* has been supposed a contraction of *on* or *at*. It may be so in some cases; but with the participles, it is sometimes a contraction of the Saxon prefix ge, and sometimes perhaps of the Celtic ag.

"In him who is, and him who finds, a friend." Pope.

Lowth condemns this use of a noun in the nominative and objective at the same time; but without reason, as the cases are not distinguished in English.

In the use of *mistaken*, there is a singularity which deserves notice. When applied to persons, it is equivalent to being wrong or in an error. "I am mistaken—you are mistaken"—mean, I am in an error, you are in an error. But applied to things, it signifies *misunderstood*; his words or opinions are *mistaken*, that is, *misunderstood*.

As used for that in the following sentence, and in similar cases, Lowth condems as improper or obsolete—"the relations are so uncertain as they require a great deal of examination." Bacon. This use of as is obsolete; but is genuine English.

It is a popular mistake to use wives for the possessive wife's. It is at my wife's disposal is correct; but not, at my mives disposal.

On the other hand, printers err in using proves for proofs, in the plural.

Latter refers both to time and place—later, to time only. Priestley.

We sometimes hear the strongest of the two, used for the stronger of the two. In such cases, the comparative degree is the more correct.

Then and above are often used as attributes; the then ministry; the above remarks; nor would I proscribe this use. It is well authorized and very convenient.

Johnson observes, "A has a peculiar signification, denoting the proportion of one thing to another; "as the landlord hath a hundred a year." But the only peculiarity of this use, is, that no preposition is employed. This and similar expressions are the primitive idiom of the language—as men originally communicated ideas chiefly by names, verbs and attributes, without connectives. The expression is perfectly good Fnglish.

Averse, in Lowth's opinion, should be followed by from; but why, any more than repugnant or unwilling? Practice has established the use of to, with propriety.

The verb lay is often used for *lie*—I will lay down. Lay is transitive—I will lay myself down. When no object follows, the intransitive verb *lie* should be used; *let him lie down*.

The word rather is used to express a small degree of excess; "She is rather profuse in her expenses." In like manner is used full; "the coffee is full strong." Priestley.

The signification of words in construction, sometimes depends on the tone of voice with which they are uttered; thus, "I cannot find one of my books," if uttered without any peculiar force of voice upon one, means that one of my books is missing. But with an emphasis upon one, it means that all are missing. Thus, if I say "No laws are better than the English," the word no uttered without emphasis, makes me declare the English to be the best laws—with emphasis, it makes me affirm them to be worse than none.

In the following sentence, an important distinction is made by the definitive a—"He behaves with a little reverence." This is positive, and rather praises than dispraises; but omitting a—"He behaves with *little* reverence," and I rather dispraise the person. Thus, when I say "There were few men present," I speak of the number as inconsiderable by way of diminution—But there were a few men present, I intend to represent the number in the most favorable light. *Priestley*.

When we say "half a dollar," we mean in value only —but "a half dollar," means a coin or piece of money.

In this mode of expression, "He looks him full in the face," the is used for his, which is rendered unnecessary by the use of him preceding. Priestley.

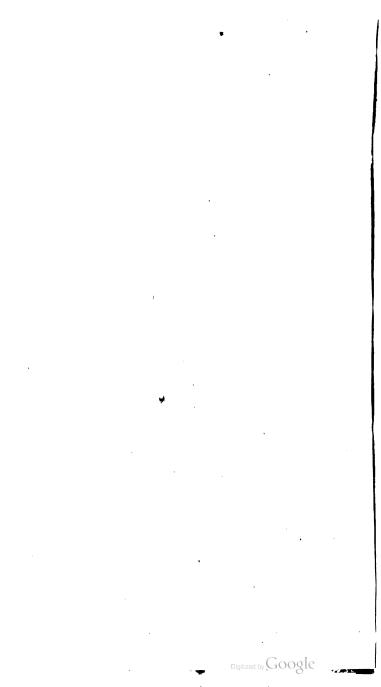

There are many grammatical errors in the writers of the 16th and 17th centuries, which Lowth, Priestley, Blair and Campbell have enumerated in their respective works, and many of them are copied into Murray's Grammar. But the greatest part of them are now so perfectly obsolete, that students are in no danger of learning them, either from books or common practice; and it seems to be inexpedient to swell the size of a modern Grammar, by criticisms upon modes of writing no longer used.

END.
